Notice of Special Board Meeting of the Southern Grove Community Development District Nos. 4 & 6
The Board of Supervisors (the "Board") of the Southern Grove Community Development District Nos. 4 & 6 will hold a Special Board Meeting on April 3, 2026, at 11:00 a.m. at the offices of Special District Services, Inc., 10521 SW Village Center Drive, Suite 203, Port St. Lucie, Florida 34987. The purpose of the Special Board Meeting is for the Board to consider adoption of a debt assessment resolution, to set a Public Hearing date and any other business which may properly come before it. A copy of the Agenda may be obtained from the Districts' websites or at the offices of the District Manager, Special District Services, Inc., 10521 SW Village Center Drive, Suite 203, Port St. Lucie, Florida 34987 during normal business hours. The meeting is open to the public and will be conducted in accordance with the provisions of Florida law. Meetings may be continued as found necessary to a time and place specified on the record. There may be occasions when one or more Supervisors will participate by telephone; therefore, a speaker telephone may be present at the meeting location so that Supervisors may be fully informed of the discussions taking place. In accordance with the provisions of the Americans with Disabilities Act, any person requiring special accommodations or an interpreter to participate at this meeting should contact the District Manager at (772) 345-5119 and/or toll free at 1-877-737-4922, at least seven (7) days prior to the date of the meeting. If any person decides to appeal any decision made with respect to any matter considered at this Special Board Meeting, such person will need a record of the proceedings and such person may need to ensure that a verbatim record of the proceedings is made at their own expense and which record includes the testimony and evidence on which the appeal is based. Meetings may be cancelled from time to time without advertised notice. Southern Grove Community Development District Nos. 4 & 6

RESOLUTION 2026-21

A RESOLUTION OF THE BOARD OF SUPERVISORS OF THE SOUTHERN GROVE COMMUNITY DEVELOPMENT DISTRICT NO. 4 DECLARING MASTER SPECIAL ASSESSMENTS; INDICATING THE LOCATION, NATURE AND ESTIMATED COST OF THOSE INFRASTRUCTURE IMPROVEMENTS WHOSE COST IS TO BE DEFRAID BY THE MASTER SPECIAL ASSESSMENTS; PROVIDING THE PORTION OF THE ESTIMATED COST OF THE IMPROVEMENTS TO BE DEFRAID BY THE MASTER SPECIAL ASSESSMENTS; PROVIDING THE MANNER IN WHICH SUCH MASTER SPECIAL ASSESSMENTS SHALL BE MADE; PROVIDING WHEN SUCH MASTER SPECIAL ASSESSMENTS SHALL BE PAID; DESIGNATING LANDS UPON WHICH THE MASTER SPECIAL ASSESSMENTS SHALL BE LEVIED; PROVIDING FOR AN ASSESSMENT PLAT; ADOPTING A PRELIMINARY ASSESSMENT ROLL; PROVIDING FOR PUBLICATION OF THIS RESOLUTION; AND RATIFYING PRIOR ACTIONS.

WHEREAS, the Southern Grove Community Development District No. 4 (the “District”) was established pursuant to Chapter 190, *Florida Statutes*, for the purposes of financing, constructing, installing, operating, and maintaining public infrastructure improvements serving the mixed-use development known as “Southern Grove;” and

WHEREAS, the District has entered into that certain *Second Amended and Restated District Development Interlocal Agreement* dated July 9, 2013, as amended by that certain *First Amendment to Amended and Restated Agreement* dated November 15, 2019, and as supplemented by that certain *Joinder to A&R Agreement* dated December 7, 2022, with Southern Grove Community Development District No. 1, Southern Grove Community Development District No. 2, Southern Grove Community Development District No. 3, Southern Grove Community Development District No. 5, Southern Grove Community Development District No. 6, Southern Grove Community Development District No. 7, Southern Grove Community Development District No. 8, Southern Grove Community Development District No. 9, and Southern Grove Community Development District No. 10, as may be further amended or supplemented from time to time (collectively, the “District Development Interlocal Agreement”); and

WHEREAS, pursuant to Resolution Nos. 2013-02, 2013-03, 2013-04, and 2013-07 (the “2013 Master Debt Service Assessment Proceedings”), the Board of Supervisors (the “Board”) of the District previously levied and imposed master debt service special assessments to fund the cost of constructing and/or acquiring certain community-wide and district-specific public infrastructure improvements (the “Improvements”) benefitting Southern Grove described in that certain *Second Amended and Restated Master Engineer’s Report for Public Infrastructure Improvements*, dated July 9, 2013, as amended by the *Supplemental Master Engineer’s Report for Public Infrastructure Improvements*, dated July 8, 2014, and the *Supplement to Master*

Engineer's Report for Public Infrastructure Improvements, dated August 1, 2019 (collectively, the "Master Engineer's Report"), attached hereto as **Composite Exhibit A** and incorporated herein by reference; and

WHEREAS, the master debt service special assessments were allocated pursuant to that certain *Amended, Restated and Updated Master Assessment Methodology Report for Public Infrastructure*, dated July 9, 2013, as amended by the *Supplemental Assessment Methodology Report for Public Infrastructure*, dated July 8, 2014 and the *Third Supplemental Assessment Methodology Report for Public Infrastructure*, dated August 1, 2019 (collectively, the "Master Assessment Methodology"), attached hereto as **Composite Exhibit B** and incorporated herein by reference; and

WHEREAS, the 2013 Master Debt Service Assessment Proceedings were validated in accordance with Chapter 75, *Florida Statutes*, pursuant to that certain *Final Judgment*, dated September 10, 2013 for which no appeal was made; and

WHEREAS, the master debt service special assessments were subsequently reallocated in 2019 (together with the 2013 Master Debt Service Assessment Proceedings, the "Original Debt Service Assessment Proceedings"); and

WHEREAS, the District assigned to Southern Grove Community Development District No. 3, Southern Grove Community Development District No. 7, and Southern Grove Community Development District No. 8 its right and obligation to collect the master debt service assessments imposed, pursuant to the Original Debt Service Assessment Proceedings, on lands formerly located within the District that are now located within such districts pursuant to those certain *Assignment and Assumption Agreement*, each dated December 7, 2022 (collectively, the "Assignment and Assumption"); and

WHEREAS, to streamline the District's assessment proceedings, the District now desires to conduct a new master debt service special assessment public hearing to memorialize the currently-approved master debt service assessment lien relative to the financing of the cost of the Improvements; and

WHEREAS, such process shall not act to increase the maximum debt service assessment lien that is authorized to be levied, or the current amount of debt service special assessments that have previously been levied and imposed by the District, or by the Administration District and/or the Issuer District (each as defined in the District Development Interlocal Agreement); and

WHEREAS, the Board of the District accordingly hereby determines to undertake, install, plan, establish, construct or reconstruct, enlarge or extend, equip, acquire, operate, and/or maintain the Improvements described in the Master Engineer's Report attached hereto as **Composite Exhibit A**; and

WHEREAS, it is in the best interest of the District to pay the cost of the Improvements by master debt service special assessments pursuant to Chapter 190, *Florida Statutes* (the “Assessments”); and

WHEREAS, the District is empowered by Chapter 190, the Uniform Community Development District Act, Chapter 170, Supplemental and Alternative Method of Making Local Municipal Improvements, and Chapter 197, the Uniform Method for the Levy, Collection, and Enforcement of Non-Ad Valorem Assessments, *Florida Statutes*, to finance, fund, plan, establish, acquire, construct or reconstruct, enlarge or extend, equip, operate, and maintain the Improvements and to impose, levy and collect the Assessments; and

WHEREAS, the District hereby determines that benefits will accrue to the property improved, the amount of those benefits, and that special assessments will be made in proportion to the benefits received as set forth in the Master Assessment Methodology attached hereto as **Composite Exhibit B** and on file at the office of the District Manager, c/o Special District Services, Inc., 2501A Burns Road, Palm Beach Gardens, FL 33410 and 10521 SW Village Center Drive, Suite 203, Port St. Lucie, Florida 34987 (collectively, the “District Records Office”); and

WHEREAS, the District hereby determines that the Assessments to be levied will not exceed the benefit to the property improved.

NOW, THEREFORE, BE IT RESOLVED BY THE BOARD OF SUPERVISORS OF THE SOUTHERN GROVE COMMUNITY DEVELOPMENT DISTRICT NO. 4:

SECTION 1. Recitals stated above are true and correct and by this reference are incorporated into and form a material part of this Resolution.

SECTION 2. Assessments shall be levied to defray a portion of the cost of the Improvements.

SECTION 3. The nature and general location of, and plans and specifications for, the Improvements are described in **Composite Exhibit A**, which is on file at the District Records Office. **Composite Exhibit B** is also on file and available for public inspection at the same location.

SECTION 4. The total estimated cost of the Improvements is \$380,990,458 (the “Estimated Cost”).

SECTION 5. The Assessments will defray approximately \$445,750,000, which includes the Estimated Cost, plus financing-related costs, capitalized interest, a debt service reserve, and contingency.

SECTION 6. The manner in which the Assessments shall be apportioned and paid is set forth in **Exhibit B**, including provisions for supplemental assessment resolutions.

SECTION 7. The Assessments shall be levied, within the District, on all lots and lands adjoining and contiguous or bounding and abutting upon the Improvements or specially benefitted thereby and further designated by the assessment plat hereinafter provided for.

SECTION 8. There is on file, at the District Records Office, an assessment plat showing the area to be assessed, with certain plans and specifications describing the Improvements and the estimated cost of the Improvements, all of which shall be open to inspection by the public.

SECTION 9. Commencing with the year in which the Assessments are levied and confirmed, the Assessments shall be paid in not more than thirty (30) annual installments. The Assessments may be payable at the same time and in the same manner as are ad valorem taxes and collected pursuant to Chapter 197, *Florida Statutes*; provided, however, that in the event the uniform non-ad valorem assessment method of collecting the Assessments is not available to the District in any year, or if determined by the District to be in its best interest, the Assessments may be collected as is otherwise permitted by law.

SECTION 10. The District Manager has caused to be made a preliminary assessment roll, in accordance with the method of assessment described in **Composite Exhibit B** hereto, which shows the lots and lands assessed, the amount of benefit to and the assessment against each lot or parcel of land and the number of annual installments into which the assessment may be divided, which assessment roll is hereby adopted and approved as the District's preliminary assessment roll.

SECTION 11. The Board shall adopt a subsequent resolution to fix a time and place at which the owners of property to be assessed or any other persons interested therein may appear before the Board and be heard as to the propriety and advisability of the assessments or the making of the Improvements, the cost thereof, the manner of payment therefore, or the amount thereof to be assessed against each property as improved.

SECTION 12. The District Manager is hereby directed to cause this Resolution to be published twice (once a week for two (2) consecutive weeks) in a newspaper of general circulation within St. Lucie County, provided that the first publication shall be at least twenty (20) days before and the last publication shall be at least one (1) week prior to the date of the hearing, and to provide such other notice as may be required by law or desired in the best interests of the District.

SECTION 13. The District hereby confirms and ratifies all actions, including but not limited to the adoption of all resolutions, taken previously in levying the master debt service assessments pursuant to the Original Debt Service Assessment Proceedings and the Assignment and Assumption.

SECTION 14. This Resolution shall become effective upon its passage.

PASSED AND ADOPTED this 3rd day of April 2026.

RESOLUTION 2026-21

A RESOLUTION OF THE BOARD OF SUPERVISORS OF THE SOUTHERN GROVE COMMUNITY DEVELOPMENT DISTRICT NO. 6 DECLARING MASTER SPECIAL ASSESSMENTS; INDICATING THE LOCATION, NATURE AND ESTIMATED COST OF THOSE INFRASTRUCTURE IMPROVEMENTS WHOSE COST IS TO BE DEFRAID BY THE MASTER SPECIAL ASSESSMENTS; PROVIDING THE PORTION OF THE ESTIMATED COST OF THE IMPROVEMENTS TO BE DEFRAID BY THE MASTER SPECIAL ASSESSMENTS; PROVIDING THE MANNER IN WHICH SUCH MASTER SPECIAL ASSESSMENTS SHALL BE MADE; PROVIDING WHEN SUCH MASTER SPECIAL ASSESSMENTS SHALL BE PAID; DESIGNATING LANDS UPON WHICH THE MASTER SPECIAL ASSESSMENTS SHALL BE LEVIED; PROVIDING FOR AN ASSESSMENT PLAT; ADOPTING A PRELIMINARY ASSESSMENT ROLL; PROVIDING FOR PUBLICATION OF THIS RESOLUTION; AND RATIFYING PRIOR ACTIONS.

WHEREAS, the Southern Grove Community Development District No. 6 (the “District”) was established pursuant to Chapter 190, *Florida Statutes*, for the purposes of financing, constructing, installing, operating, and maintaining public infrastructure improvements serving the mixed-use development known as “Southern Grove;” and

WHEREAS, the District has entered into that certain *Second Amended and Restated District Development Interlocal Agreement* dated July 9, 2013, as amended by that certain *First Amendment to Amended and Restated Agreement* dated November 15, 2019, and as supplemented by that certain *Joinder to A&R Agreement* dated December 7, 2022, with Southern Grove Community Development District No. 1, Southern Grove Community Development District No. 2, Southern Grove Community Development District No. 3, Southern Grove Community Development District No. 4, Southern Grove Community Development District No. 5, Southern Grove Community Development District No. 7, Southern Grove Community Development District No. 8, Southern Grove Community Development District No. 9, and Southern Grove Community Development District No. 10, as may be further amended or supplemented from time to time (collectively, the “District Development Interlocal Agreement”); and

WHEREAS, pursuant to Resolution Nos. 2013-02, 2013-03, 2013-04, and 2013-07 (the “2013 Master Debt Service Assessment Proceedings”), the Board of Supervisors (the “Board”) of the District previously levied and imposed master debt service special assessments to fund the cost of constructing and/or acquiring certain community-wide and district-specific public infrastructure improvements (the “Improvements”) benefitting Southern Grove described in that certain *Second Amended and Restated Master Engineer’s Report for Public Infrastructure Improvements*, dated July 9, 2013, as amended by the *Supplemental Master Engineer’s Report for Public Infrastructure Improvements*, dated July 8, 2014, and the *Supplement to Master*

Engineer's Report for Public Infrastructure Improvements, dated August 1, 2019 (collectively, the “Master Engineer’s Report”), attached hereto as **Composite Exhibit A** and incorporated herein by reference; and

WHEREAS, the master debt service special assessments were allocated pursuant to that certain *Amended, Restated and Updated Master Assessment Methodology Report for Public Infrastructure*, dated July 9, 2013, as amended by the *Supplemental Assessment Methodology Report for Public Infrastructure*, dated July 8, 2014 and the *Third Supplemental Assessment Methodology Report for Public Infrastructure*, dated August 1, 2019 (collectively, the “Master Assessment Methodology”), attached hereto as **Composite Exhibit B** and incorporated herein by reference; and

WHEREAS, the 2013 Master Debt Service Assessment Proceedings were validated in accordance with Chapter 75, *Florida Statutes*, pursuant to that certain *Final Judgment*, dated September 10, 2013 for which no appeal was made; and

WHEREAS, the master debt service special assessments were subsequently reallocated in 2019 (together with the 2013 Master Debt Service Assessment Proceedings, the “Original Debt Service Assessment Proceedings”); and

WHEREAS, the District assigned to Southern Grove Community Development District No. 9 and Southern Grove Community Development District No. 10 its right and obligation to collect the master debt service assessments imposed, pursuant to the Original Debt Service Assessment Proceedings, on lands formerly located within the District that are now located within such districts pursuant to those certain *Assignment and Assumption Agreement*, each dated December 7, 2022 (collectively, the “District Assignment and Assumption”); and

WHEREAS, Southern Grove Community Development District No. 1 additionally thereafter assigned to the District its right and obligation to collect the master debt service assessments imposed, pursuant to the Original Debt Service Assessment Proceedings, on lands formerly located within such district pursuant to that certain *Assignment and Assumption Agreement*, dated December 7, 2022 (together with the District Assignment and Assumption, the “Assignment and Assumption”); and

WHEREAS, to streamline the District’s assessment proceedings, the District now desires to conduct a new master debt service special assessment public hearing to memorialize the currently-approved master debt service assessment lien relative to the financing of the cost of the Improvements; and

WHEREAS, such process shall not act to increase the maximum debt service assessment lien that is authorized to be levied, or the current amount of debt service special assessments that have previously been levied and imposed by the District, or by the Administration District and/or the Issuer District (each as defined in the District Development Interlocal Agreement); and

WHEREAS, the Board of the District accordingly hereby determines to undertake, install,

plan, establish, construct or reconstruct, enlarge or extend, equip, acquire, operate, and/or maintain the Improvements described in the Master Engineer's Report attached hereto as **Composite Exhibit A**; and

WHEREAS, it is in the best interest of the District to pay the cost of the Improvements by master debt service special assessments pursuant to Chapter 190, *Florida Statutes* (the "Assessments"); and

WHEREAS, the District is empowered by Chapter 190, the Uniform Community Development District Act, Chapter 170, Supplemental and Alternative Method of Making Local Municipal Improvements, and Chapter 197, the Uniform Method for the Levy, Collection, and Enforcement of Non-Ad Valorem Assessments, *Florida Statutes*, to finance, fund, plan, establish, acquire, construct or reconstruct, enlarge or extend, equip, operate, and maintain the Improvements and to impose, levy and collect the Assessments; and

WHEREAS, the District hereby determines that benefits will accrue to the property improved, the amount of those benefits, and that special assessments will be made in proportion to the benefits received as set forth in the Master Assessment Methodology attached hereto as **Composite Exhibit B** and on file at the office of the District Manager, c/o Special District Services, Inc., 2501A Burns Road, Palm Beach Gardens, FL 33410 and 10521 SW Village Center Drive, Suite 203, Port St. Lucie, Florida 34987 (collectively, the "District Records Office"); and

WHEREAS, the District hereby determines that the Assessments to be levied will not exceed the benefit to the property improved.

NOW, THEREFORE, BE IT RESOLVED BY THE BOARD OF SUPERVISORS OF THE SOUTHERN GROVE COMMUNITY DEVELOPMENT DISTRICT NO. 6:

SECTION 1. Recitals stated above are true and correct and by this reference are incorporated into and form a material part of this Resolution.

SECTION 2. Assessments shall be levied to defray a portion of the cost of the Improvements.

SECTION 3. The nature and general location of, and plans and specifications for, the Improvements are described in **Composite Exhibit A**, which is on file at the District Records Office. **Composite Exhibit B** is also on file and available for public inspection at the same location.

SECTION 4. The total estimated cost of the Improvements is \$380,990,458 (the "Estimated Cost").

SECTION 5. The Assessments will defray approximately \$445,750,000, which includes the Estimated Cost, plus financing-related costs, capitalized interest, a debt service reserve, and contingency.

SECTION 6. The manner in which the Assessments shall be apportioned and paid is set forth in **Exhibit B**, including provisions for supplemental assessment resolutions.

SECTION 7. The Assessments shall be levied, within the District, on all lots and lands adjoining and contiguous or bounding and abutting upon the Improvements or specially benefitted thereby and further designated by the assessment plat hereinafter provided for.

SECTION 8. There is on file, at the District Records Office, an assessment plat showing the area to be assessed, with certain plans and specifications describing the Improvements and the estimated cost of the Improvements, all of which shall be open to inspection by the public.

SECTION 9. Commencing with the year in which the Assessments are levied and confirmed, the Assessments shall be paid in not more than thirty (30) annual installments. The Assessments may be payable at the same time and in the same manner as are ad valorem taxes and collected pursuant to Chapter 197, *Florida Statutes*; provided, however, that in the event the uniform non-ad valorem assessment method of collecting the Assessments is not available to the District in any year, or if determined by the District to be in its best interest, the Assessments may be collected as is otherwise permitted by law.

SECTION 10. The District Manager has caused to be made a preliminary assessment roll, in accordance with the method of assessment described in **Composite Exhibit B** hereto, which shows the lots and lands assessed, the amount of benefit to and the assessment against each lot or parcel of land and the number of annual installments into which the assessment may be divided, which assessment roll is hereby adopted and approved as the District's preliminary assessment roll.

SECTION 11. The Board shall adopt a subsequent resolution to fix a time and place at which the owners of property to be assessed or any other persons interested therein may appear before the Board and be heard as to the propriety and advisability of the assessments or the making of the Improvements, the cost thereof, the manner of payment therefore, or the amount thereof to be assessed against each property as improved.

SECTION 12. The District Manager is hereby directed to cause this Resolution to be published twice (once a week for two (2) consecutive weeks) in a newspaper of general circulation within St. Lucie County, provided that the first publication shall be at least twenty (20) days before and the last publication shall be at least one (1) week prior to the date of the hearing, and to provide such other notice as may be required by law or desired in the best interests of the District.

SECTION 13. The District hereby confirms and ratifies all actions, including but not limited to the adoption of all resolutions, taken previously in levying the master debt service

assessments pursuant to the Original Debt Service Assessment Proceedings and the Assignment and Assumption.

SECTION 14. This Resolution shall become effective upon its passage.

**SECOND AMENDED AND RESTATED MASTER ENGINEER'S REPORT
FOR
PUBLIC INFRASTRUCTURE**

**SOUTHERN GROVE COMMUNITY DEVELOPMENT DISTRICTS NOS. 1-6
CITY OF PORT ST. LUCIE, FLORIDA**

July 9, 2013

Introduction

This report will supersede, amend, and restate in its entirety, the Master Engineer's Report dated October 9, 2012, as amended and restated on February 21, 2013, based on new information provided to the engineer.

Southern Grove (the "Development") is an approximately 3,606 acre mixed-use development in the City of Port St Lucie, Florida (the "City") within St. Lucie County, Florida. The Development is located south of Tradition Boulevard, directly West of I-95, and north of the SFWMD C-23 Canal in Sections 15, 16, 22, 23, 26, 27, 34, and 35 in Township 37S, Range 39 E. (See Exhibit "A")

The land within the Development is included within six separate Community Development Districts designated as: Southern Grove Community Development District No. 1 (47.47 Acres), Southern Grove Community Development District No. 2 (398.29 Acres), Southern Grove Community Development District No. 3 (848.05 Acres), Southern Grove Community Development District No. 4 (957.79 Acres), Southern Grove Community Development District No. 5 (540.13 Acres), Southern Grove Community Development District No. 6 (813.03 Acres) (each a "District" and together, the "Districts"). The Districts are contiguous to one another. The Development is primarily owned by a single landowner (the "Master Developer") and some parcels have been deeded to other entities. Development on some of the transferred parcels has been completed, or is under way, including existing platted development in the Districts (the "Existing Development").

The Existing Development does not require and will not specially benefit from the "Community Infrastructure" (as defined below). Construction of improvements on the land included in the Existing Development is either complete or under construction and implementation of Community Infrastructure is not required in connection with such improvements pursuant to applicable governmental development orders, approvals and permits. Community Infrastructure is required for development of the balance of the Community Property (as defined below) to proceed. The Existing Development will specially benefit from the related "District Infrastructure" (as defined below). Please refer to Exhibit B for boundaries of the Districts, Exhibit G for current property owners' interests, and Exhibit H for location of the Existing Development parcels.

For purposes of this report the term "Public Infrastructure" shall include two categories of improvements. As more fully described below, "Community Infrastructure" improvements

are those improvements that specially benefit all land within the Districts except Existing Development, while "District Infrastructure" improvements are those improvements that specially benefit only the land within one specific District. All land within the Districts is referred to as the "Community Property."

The City established the Southwest Annexation Special Assessment District No.1 (the "SAD") as a special assessment district under applicable law. The SAD encompasses the Community Property. The City issued its Special Assessment Bonds, Series 2007B (the "SAD Bonds") secured primarily by revenues derived from the collection of non-ad valorem special assessments levied by the City on Community Property (the "SAD Assessments"). The SAD Bonds financed the construction of certain public infrastructure improvements needed to serve the Development (the "SAD Project"). Phase 1 of the SAD Project is complete and some of the Public Infrastructure improvements identified in this report will complete or augment those improvements.

Exhibit E of this report identifies those public roadways within the District that are considered included in Community Infrastructure. As can be seen from a comparison of existing conditions shown on the aerial location map in Exhibit A and Community Infrastructure roadways identified in Exhibit E, some of the improvements to be constructed fall within the rights of way of the public roadways included in the City's SAD Project and some construction has been completed.

Pursuant to a written interlocal agreement (the "Interlocal Agreement"), the Districts have provided for the implementation of the Community Infrastructure by delegating to one of the Districts in the manner set forth in the Interlocal Agreement (the "Issuer") the authority to finance, acquire and construct such Community Infrastructure within the boundaries of the Districts. The Interlocal Agreement also provides for another of the Districts (the "Administration District") to operate and maintain, on behalf of the Issuer for the benefit of all of the Districts, any portions of the Community Infrastructure not conveyed to another governmental entity. The Issuer may also finance, acquire and construct the infrastructure necessary to serve the property within the boundaries of a specific District (the "District Infrastructure"), subject to the reserved rights of each District to finance the acquisition and construction of its own District Infrastructure. District Infrastructure may be operated and maintained by the Administration District or the applicable District in which such District Infrastructure is located to the extent not conveyed to another governmental entity.

Public Infrastructure Project Description

The components of Community Infrastructure identified herein are those which are presently anticipated to be necessary to complete the development of the Community Property (excluding Existing Development) based on current development approvals and development plans of the Master Developer, all of which are subject to change as a result of market conditions and permitting requirements. Each component of the Community Infrastructure will specially benefit all of the Community Property except Existing Development and is not considered specific to any one of the Districts and comprise "projects" as defined in Chapter 190, Florida Statutes. It is intended that all of the Districts will share in the cost of the Community Infrastructure based on their relative benefit as

identified in the assessment methodology report prepared by Fishkind & Associates, Inc., Financial Advisor to the Districts, and approved by all of the Districts, as supplemented from time to time.

The components of District Infrastructure identified herein include public improvements basic to supplying urban services to Community Property within each individual District. Components of District Infrastructure would specially benefit only the Community Property located within an individual District and are therefore considered to be specific to that District. Costs associated with the construction of District Infrastructure would be assessed to only those specific properties that are specially benefited and are therefore subject to a separate allocation of benefits and methodology developed and presented in the assessment methodology report prepared by the Financial Advisor and approved by each of the Districts, as supplemented from time to time.

Those Community Improvements and District Infrastructure Improvements needed for the completion of the development of the Community Property not eligible for tax-exempt financing are expected to be constructed by the Master Developer, other owners of parcels of Community Property, or another phase of the City's SAD Project.

Pursuant to the authority delegated to it by the Interlocal Agreement, it is anticipated that the Issuer will issue Special Assessment Bonds, in one or more series, to finance costs of financing the acquisition and construction of a portion of the public Community Infrastructure improvements described herein. The Interlocal Agreement also contemplates that the Issuer, on behalf of itself and any of the other delegating Districts, may issue special assessment bonds to pay for costs of District infrastructure as described herein, subject to the reserved rights of each of the Districts to finance the acquisition and construction of its own District Infrastructure through the issuance of their own special assessment bonds.

This report will be supplemented in connection with each issue of special assessment bonds issued to finance components of Public Infrastructure.

Permitting

Development activities at the Development commenced pursuant to a preliminary development agreement (PDA) with the State of Florida Department of Community Affairs (DCA). The City approved the original Development Order (DO) for the Southern Grove DRI under Resolution 06-R90 on September 25, 2006. The City has since approved the First Amendment to the Development Order under Resolution 07-R62, on August 13, 2007, and the Second Amendment to the Development Order under Resolution 12-R34, on March 26, 2012, and again April 9, 2012.

As specific phases of the Development and Public Infrastructure continue to be site planned and engineered, as applicable, City site plan and construction plan approvals will be necessary as well as numerous other local, State and federal permits associated with this type of work. All permits required for project completion were anticipated and will be obtained through the normal course of business. Several construction related permits

associated with the overall Development and Public Infrastructure have been obtained allowing development to begin.

A listing of the permits applied for or received to date in connection with Public Infrastructure is included below.

A South Florida Water Management District Master Surface Water Management Conceptual and Phase 1 construction permit allowing construction of some of the lakes along with South Community Boulevard and Village Parkway was issued by the District on December 14, 2006 under application 060314-7. Permit # 56-02531-P)

Further modification of the South Florida Water Management District Conceptual Permit and a construction permit related to the construction of a wetland creation area was issued on August 4, 2009 under Application 080728-9. (Permit # 56-02531-P)

A South Florida Water Management District Water Use Permit allowing dewatering during construction within the overall Southern Grove project was issued by the District on February 15, 2007 under application 060505-2. (Permit # 56-02582-W)

A South Florida Water Management District Letter Modification for the inclusion of Lake # 3 into the previously issued Lake Construction permit is under review by the District under Application 070608-8.

A South Florida Water Management District Right of Way Permit for the replacement of two existing connections into the C-23 Canal is under review by the District under Application 06-1016-2.

An Army Corp of Engineers Permit was issued for Westchester 200103272 (IP-TA), by the ACOE on 4/26/2002

An Army Corp of Engineers Permit was issued for Westchester- Upland Enhancement (Phase 1), Borrow Canal, and North Icon Structure, Modification #1, 200103272 (IP-TA), issued by the Corp on 7/25/2002

An Army Corp of Engineers Permit for impacts to wetlands and waters of the state was issued for the entire Southern Grove project. SAJ-2006-2046 (IP-AAZ) issued by the Corp on 4/14/2008

Florida Department of Environmental Protection Permit for Wastewater Collection for Phase 1A, , 0042513-053-DWC, issued by the Department on 1/8/2003

Florida Department of Environmental Protection Permit for Water Distribution for Phase 1A, 0081064-129-DSC, issued by the Department on 1/6/2003

Land Use

The Development is a planned multi-use Development of Regional Impact and at build out will include residential, commercial, institutional, and recreational uses. Residential uses may include both single family and multi-family ownership and rental properties. Commercial uses will include office, retail, hotel, research, and industrial components.

Institutional uses being considered include schools, university/college, hospital, research park, and municipal buildings.

Southern Grove District No. 5 has experienced some development. New facilities for the Torrey Pines Institute for Molecular Studies and Vaccine & Gene Therapy Institute have been completed and are in operation. A Homewood Suites hotel by Hilton is complete and construction of a Martin Memorial Health Systems hospital has begun.

Exhibit C of this report shows the overall site plan, land use designations, roadway, lake, and wetland features of the site comprising the Development. The Table below shows a listing of the land uses by unit numbers and square footage approved by the City under Resolution 12-R34.

Development Plan for The Community Property

| <i>Category</i> | <i>Volume</i> | <i>Acres</i> |
|---------------------------|---------------|--------------|
| Single-family Units <55 | 1,500 | 214 |
| Single-family Units 55-65 | 1,200 | 200 |
| Single-family Units >65 | 614 | 123 |
| Multifamily Units | 1,972 | 247 |
| Apartment Units | 2,102 | 175 |
| Retail square feet | 3,675,075 | 211 |
| Office square feet | 2,430,728 | 140 |
| Research & Development | 2,498,602 | 143 |
| Warehouse/Industrial | 4,583,336 | 526 |

Summary of Community Infrastructure Components

Public Roadways

Certain public roadways within and outside the boundaries of the Districts have been identified as part of the Community Infrastructure and are shown on Exhibit E. The costs for all, or part, of the public roadways may be born solely by the Districts, cost shared with the developers of surrounding properties also benefiting from the

construction of those roadways, or be funded and constructed as another phase of the City's SAD Project. The public roadways are intended to accommodate both internal and external traffic entering, exiting, and crossing through the various Districts. As a result of their intended use, construction of those roadways will specially benefit all of the Community Property except Existing Development.

Onsite Public Roadways

New construction or additions to onsite public roadways that are included as part of Community Infrastructure are identified as follows:

Village Parkway: Add two lanes from E/W 1 to E/W 2 (Approx. 0.70 miles)

Village Parkway: Add two lanes from E/W 2 to E/W 3 (Approx. 0.84 miles)

Village Parkway: Add two lanes from E/W 3 to Paar Drive (Approx. 0.96 miles)

Village Parkway: Add two lanes from Paar Drive to Becker Road (Approx. 0.69 miles)

Becker Road: Construct initial two lane roadway from Community Boulevard to Village Parkway (Approx. 1.12 miles)

Becker Road: Add 2 lanes from Community Boulevard to Village Parkway (Approx. 1.12 miles)

Community Boulevard: Add two lanes from Tradition Parkway to E/W 1 (Approx. 0.86 miles)

Community Boulevard: Add two lanes from E/W 4 to Becker Road (Approx. 0.74 miles)

E/W 1: Add two lanes from Community Blvd. to Village Parkway (Approx. 0.35 miles)

E/W 1: Add two lanes from Village Parkway to Employment Collector Roadway (Approx. 0.30 miles) This section of roadway is also known as Discovery Way.

E/W 3: Construct initial two lane roadway from Village Parkway to I-95 (Approx. 0.62 miles)

E/W 3: Construct initial two lane roadway from Community Boulevard to Village Parkway (Approx. 0.80 miles)

E/W 3: Add two lanes from Village Parkway to I-95 (Approx. 0.62 miles)

E/W 3: Add two lanes from Community Boulevard to Village Parkway (Approx. 0.80 miles)

Employment Collector Roadway: Construct initial two lane roadway from E/W 1 to Paar Drive (Approx. 2.80 miles)

Residential Collector Roadway: Construct initial two lane roadway from E/W 2 to Becker Road (Approx. 2.40 miles)

Paar Drive: Construct initial four lane roadway from Community Boulevard to Village Parkway (Approx. 1.14 miles)

Paar Drive: Construct initial four lane roadway from Village Parkway to the western approach to the bridge over I-95 (Approx. 0.40 miles)

Offsite Public Roadways

Paar Drive: Construct initial four lane roadway and bridge over I-95 from the western bridge approach to Rosser Boulevard (Approx. 0.37 miles including bridge construction)

Paar Drive: Add two lanes from Rosser Boulevard to Savona Boulevard (offsite) (Approx. 1.00 miles)

Paar Drive: Add two lanes from Savona Boulevard to Port St Lucie Boulevard (Approx. 0.80 miles)

The majority of the Community Property within the Development is undeveloped consisting mostly of open pasture and citrus groves with some pine flatwoods and isolated wetlands. It will be necessary to clear and remove vegetation and then strip some areas of 4"-6" of soil and root material prior to commencing filling operations in the areas of roadway construction.

Silt screens and turbidity barriers will be utilized to control erosion and turbidity during the earthwork operation.

Installation of a system of catch basins, inlets, manholes and underground storm drainage piping integral to the construction of the roadways listed above is a part of the cost of construction for the roads and is included within the cost estimates for construction of the public roadways.

Certain public roadway improvements, once constructed and accepted, will be owned and maintained by the City while others will be owned by the Issuer and maintained by the Administration District.

Intersection and Signalization Improvements

Some intersection and signalization improvements were installed as a part of the City's Southwest Annexation No. 1 Project. Some additional intersection and signalization improvements, as shown in Exhibit F, will be required as a result of the

construction of the above listed roadway improvements and are included as a part of Community Infrastructure. Intersection and signalization improvements currently anticipated are located at the following intersections:

- Village Parkway at E/W 1
- Village Parkway at E/W 2
- Village Parkway at E/W 3
- Village Parkway at Parr Drive
- Village Parkway at Becker Road

- Community Boulevard at E/W 1
- Community Boulevard at E/W 2
- Community Boulevard at E/W 3
- Community Boulevard at Parr Drive
- Community Boulevard at Becker Road

- Employment Collector Roadway at E/W 3
- Employment Collector Roadway at Parr Drive

- Residential Collector Roadway at E/W 1
- Residential Collector Roadway at E/W 2
- Residential Collector Roadway at Parr Drive
- Residential Collector Roadway at Becker Road

Certain intersection and signalization improvements will be owned and maintained by the City while others will be owned by the Issuer and maintained by the Administration District.

Master and Secondary Water Management System, Control Structures, Lake Excavation and Related Earthwork

The Master Water Management System is comprised of water management lakes, interconnecting culverts, control structures, and wetland/upland conservation areas in accordance with the existing SFWMD conceptual permit. The Secondary Water Management System is comprised of inlets and culverts designed to collect and transmit drainage from community infrastructure roadways and other Community Property to the Master Water Management System.

Water management lakes in the Community Property will need to be excavated as part of Community Infrastructure to provide for water quality and flood protection of the Community Property. The total area of the expected water management lakes for the Community Property upon completion constitutes approximately 13.6% of the total Community Property. Modeling included in the current surface water management permit for the Community Property anticipates the construction of 489.15 acres of lakes as measured at control elevation.

Costs associated with excavation of the water management lakes, to the extent necessary to provide for water quality and flood protection, include excavation of material to a water depth of 12 feet, stabilizing the lake banks with sod, and stockpiling excavated material in designated areas on property within the Districts. Stockpiling of excavated material in this manner is less expensive than transporting to offsite locations.

Drainage is generally from west to east with the overall water management plan calling for the western lakes to be held at a higher elevation than the eastern lakes causing a cascading effect. The primary route for discharge of runoff is easterly to the Duda conveyance canal located at the eastern border of the District and through Control Structure D-02 to the South Florida Water Management District C-23 Canal.

There is one drainage basin within the project designated as Basin 8 lying adjacent to the C-23 Canal that discharges directly to the C-23 Canal through Control Structure D-08. In addition, the current Tradition surface water management permit (56-01569-P), issued by the South Florida Water Management District, accommodates flow through from approximately 432.72 acres of area located in Southern Grove Community Development District No. 5.

The entire water management system, including the master and secondary water management system and control structures, is included as a part of Community Infrastructure. The control structures are integral in allowing the overall water management system to provide for the differing lake elevations necessary to maintain wetland viability and control discharge volumes between the various water management Basins established within the South Florida Water Management District permit for Development Community Infrastructure.

It is anticipated that the Issuer will finance and construct the water management system. However, it is also possible that the Master Developer and individual developers of the various parcels will construct portions of the water management system as part of their respective developments and will dedicate the portions of the system constructed by them to the Issuer, which will then cause the Administration District to operate and maintain these projects upon completion. In addition, an excavated lake within the boundaries of Southern Grove Community Development District No. 5, that is part of the Community Infrastructure, will be contributed by the Developer to the Issuer. This contribution will be valued at \$330,000 which is the cost of excavating the lake.

The Policies and Procedures Manual for Southern Grove Community Development District adopted or to be adopted sets forth guidelines and conditions under which developers may construct certain elements of the qualified public improvements included in this report and sell the completed improvements to the Issuer.

Exhibit D gives a general overview of the total acreage of the water management system lakes in each Basin in the Community Property, included within the Community Infrastructure. The size of lakes, lake interconnect culverts, and

discharge control structures were taken from the existing South Florida Water Management District Conceptual and Construction Permit. Modeling for the proposed system and the application to the South Florida Water Management was prepared by Engineering Design & Construction, Inc. of Fort Pierce, Florida.

Changes in the configuration of the lakes is anticipated as a result of final site planning and modifications to the Conceptual Permit will be necessary as changes are made known. Such changes are ordinary for a development of this size and are issued through the normal course of permitting.

The master water management system and control structures will be owned by the Issuer and maintained by the Administration District, while certain components of the secondary water management system may be owned by either the City or the Issuer and maintained by the Administration District.

On-Site and Off-Site Water & Sewer Utilities

On-site utilities including the major water supply, sewage collection and transmission lines to be constructed within the rights of way of the Community Infrastructure roadways are included as part of the Community Infrastructure. Potable water and wastewater treatment will be provided by existing City facilities. The construction of pump stations and force mains are included as part of the Community Infrastructure as well.

The location and line sizes used in preparation of the cost estimate were as stated in a report prepared for the City by Reiss Environmental titled "Water Distribution and Wastewater Collection Master Plan".

All water and sewer facilities will be turned over to the City for operation and maintenance once completed, certified, and accepted by the City.

Community Recreation Complex

The Community Infrastructure includes a Community Recreation Complex consisting of athletic facilities designed to meet the needs of the Community Property. The complex will be built in phases and will ultimately utilize as much as 75 gross acres on one or more parcels of land. The complex is currently envisioned to include: (a) two lighted baseball/softball fields, (b) four lighted soccer fields, (c) six lighted tennis courts, (d) four lighted basketball courts, and a swimming and fitness center.

Community Infrastructure improvements serving the Community Recreation Complex as well as facilities included in the Complex to the extent financed by the Issuer will be owned by the Issuer and will be operated and maintained by the Administration District.

Recreation Trail System

The Community Infrastructure includes the design of active parks and construction of an extensive system of trails and improved pedestrian walkways. Some of the pedestrian walkways will be a part of the walkway system constructed with the Community Infrastructure roadways, while others will be constructed in parks, open space, and preserve areas; all will be open and accessible by the public. The location of the trail system, as currently envisioned, is shown as a red line in Exhibit C.

Trail system improvements within Community Infrastructure roadways will be owned by either the City or the Issuer and operated and maintained by the City or the Administration District. Trail system improvements within open space or preserve areas financed and owned by the Issuer will be operated and maintained by the Administration District.

Landscape & Irrigation

A major component of creating a master planned community is the creation of a consistent landscape approach and theme. As such, the Community Infrastructure includes landscaping and irrigation improvements to be installed within and along the Community Infrastructure public roadway system.

Landscape and Irrigation improvements installed as a part of Community Infrastructure will be owned by the Issuer and/or another public entity and operated and maintained by Administration District and/or other public entity who has responsibility for maintenance and operation of the public roadway within which the improvements are installed.

Irrigation transmission mains will be installed, owned, and operated by a private entity and are therefore, not a part of the Community Infrastructure improvements identified in this report.

Master Signage Program

The cost for developing and implementing a community-wide master signage program has been included as a part of Community Infrastructure. Improvements include monument and directional signage on public Community Infrastructure roadways or public right of way as well as hardscape improvements at various locations throughout the Districts located on public Community Infrastructure roadways or public right of way.

These improvements will be owned by the Issuer and maintained by the Administration District.

Environmental Mitigation

There are numerous environmentally sensitive areas throughout the Districts, some of which are required to be preserved, enhanced, and monitored for continued viability by the approving agencies. Cost associated with this work has been included as a part of this Community Infrastructure.

It is anticipated that the Issuer will receive dedication of these areas during the platting process and the Administration District will be responsible for the ongoing monitoring and maintenance of these areas.

Construction Cost Estimate

Consulting services relating to Community Infrastructure including engineering, surveying, landscape architecture, and legal services during project development, design, and construction phases have been incorporated into the construction cost and are shown as an individual line item in the cost table shown on the next page.

Cost Estimate for Community Infrastructure Improvements

The costs below will complete all Community Infrastructure improvements described in this report and include costs needed to augment improvements constructed under Phase 1 of the City's SAD Project. It is expected that construction of all remaining Community Infrastructure will be substantially complete by 2036.

| Improvement Category | Developer Contribution | District Cost | Total |
|------------------------------------------|-------------------------------|----------------------|----------------------|
| Onsite Roadways | | \$54,148,000 | \$54,148,000 |
| Offsite Roadways | | \$24,124,000 | \$24,124,000 |
| Intersections & Signalization | | \$12,700,000 | \$12,700,000 |
| Public Water & Sewer Utilities | | \$8,193,000 | \$8,193,000 |
| Roadway Landscape & Irrigation | | \$6,984,000 | \$6,984,000 |
| Roadway Lighting | | \$5,593,000 | \$5,593,000 |
| Water Management Lake Excavation | \$330,000 | \$16,142,000 | \$16,472,000 |
| Control Structures & Interconnect Pipe | | \$7,550,000 | \$7,550,000 |
| Community Recreation Complex | | \$50,000,000 | \$50,000,000 |
| Recreational Trail System | | \$1,500,000 | \$1,500,000 |
| Master Signage | | 750,000 | \$750,000 |
| Environmental Mitigation | \$2,793,910 | 5,162,000 | \$7,955,910 |
| Subtotal | \$3,123,910 | \$192,846,000 | \$195,969,910 |
| Engineering, Legal, Administration (15%) | | \$28,926,900 | \$28,926,900 |
| Contingency (10%) | | \$19,284,600 | \$19,284,600 |
| Total Cost | \$3,123,910 | \$241,057,500 | \$244,181,410 |

The costs for all, or part, of the public roadways may be borne solely by the Districts, cost shared with the developers of surrounding properties also benefiting from the construction of those roadways, or funded and constructed as another phase of the City's SAD Project.

In addition to the \$330,000 of value associated with the excavation of a lake mentioned earlier in this report, the Developer intends to contribute a total of 279.39 acres of property for water management, conservation and mitigation purposes. The total value of excavated lake and contributed land will be considered Contributed Community Infrastructure. It is intended that the total value of the Contributed Community Infrastructure be established and that credit for prepayment of Community Infrastructure Assessments be issued once an agreement between the Developer and the Issuer is in place.

Summary of District Infrastructure Components

District Infrastructure included under this category includes public improvements basic to supplying urban services to lots and properties within each individual District. Infrastructure within this category would specially benefit only the Community Property within the individual District and costs of those improvements would be shared by only those properties that were specially benefitted.

District Infrastructure may include, but not be limited to, the following public improvements:

- Public Roadways
- Drainage Facilities
- Water Distribution System
- Sanitary Sewer System
- Landscaping
- Landscape Irrigation
- Hardscape
- Lighting
- Wetland and Upland Preserves
- Parks and Recreational Amenities

The majority of the Community Property within the Districts is still owned and controlled by the Master Developer and the ultimate owners or developers of those properties are unknown. For the purposes of this report, we have included a budget cost for District Infrastructure based on \$60,000 per gross acre. This budgeted cost may, or may not, cover all costs associated with infrastructure categories identified above depending on the type of project being constructed. Buildout for District Infrastructure improvements is dependent on market conditions but is anticipated to occur within a twenty year period.

Cost Estimate for District Infrastructure Improvements

| District Infrastructure | Estimated Cost |
|-------------------------|----------------|
| District No. 1 | \$ 2,848,200 |
| District No. 2 | \$ 23,897,400 |
| District No. 3 | \$ 50,883,000 |

| | |
|----------------|---------------|
| District No. 4 | \$ 57,467,400 |
| District No. 5 | \$ 32,407,800 |
| District No. 6 | \$ 48,781,800 |

Estimated District Infrastructure Cost \$216,285,600

Conclusion

We have reviewed the projected cost figures for qualifying Community Infrastructure and District Infrastructure improvements that are part of this report and have found them to be reasonable for this type of development. The impact of market conditions, increased regulatory actions and other factors affecting the development on future costs can not be completely assessed and may impact the project over a long period of time.

Assuming Project construction will proceed in a timely manner, it is our opinion that the proposed improvements, if constructed and built in substantial accordance with current land use designations and approved plans, can be completed and meet their intended function. Where available, historical costs, information from other professional or utility consultants and contractors have been used in preparation of this report. Consultants and contractors who have contributed in providing the cost data included in this report are reputable entities within the Treasure Coast/Port St. Lucie area.

It is therefore our opinion that the future components of the Community Infrastructure and District Infrastructure can be completed at the costs as stated.

We have reviewed the "Analysis of Benefits from the Installation of Public Infrastructure" report prepared by Fishkind & Associates, Inc. dated February 21, 2013. Based on the increased real estate values and land uses stated in the report, we have concluded that the benefits accrued from the completion of Phase 1 of the City's SAD Project, Community Infrastructure, and District Infrastructure improvements will exceed one billion dollars.

We are further of the opinion that the Community Infrastructure and District Infrastructure, together with the SAD Project improvements heretofore and hereafter constructed, will specially benefit the Community Property; provided, however, that the Community Infrastructure will not specially benefit Existing Development, and provided, further, that the District Infrastructure will only specially benefit the lands within the specific District requiring such District Infrastructure.

Introduction

This report supplements that certain Second Amended and Restated Master Engineer's Report dated July 9, 2013 (the "Master Engineer's Report"). As more fully described in the Master Engineer's Report, there are now six separate community development districts (CDD No. 1 – CDD No. 6) (collectively, the "Districts") established for the mixed-use development known as "Southern Grove" (the "Development") encompassing approximately 3,606 acres, all located within the City of Port St. Lucie. As more fully described in the Master Engineer's Report, a portion of the Development, referred to as the "Existing Development" in the Master Engineer's Report, does not require and will not specially benefit from the "Community Infrastructure" (as defined in the Master Engineer's Report and described below).

The configuration of Southern Grove Community Development Districts Nos. 1 - 6 can be seen in Exhibit A of this report.

As noted in the Master Engineer's Report, certain public infrastructure improvements have been implemented by the City of Port St Lucie through the City's Southwest Annexation Special Assessment District No. 1 (the "SAD") financed by the issuance of Special Assessment Bonds, Series 2007B (the "SAD Bonds").

Information contained in the Master Engineer's Report sets forth a plan and estimated cost for "Public Infrastructure" improvements necessary to support the property through build out. This area is referred to as "Community Property". CDD Nos. 1-6 are referred to collectively as the "Community Property Districts" and each of such districts are sometimes referred to herein as a "Community Property District." The Community Property Districts are depicted on Exhibit A.

For the purposes of the Master Engineer's Report, the Public Infrastructure improvements anticipated for the Community Property Districts is divided into two categories.

The first category is "Community Infrastructure" that is made up of improvements that are needed to serve all of the Community Property other than the Existing Development. Examples of Community Infrastructure would be major roadways, drainage, water distribution, sewage collection and transmission facilities, lighting, landscape, irrigation, hardscape, buffers, and master directional signage all located within and along the perimeter of the major roadway corridors. Other components of community infrastructure could include the master water management system of lakes, inter-connecting culverts, and control structures necessary to control stormwater runoff. Public facilities, parks, recreational walking trails, environmental mitigation plantings, and preserve areas are also considered to be in this category. Each component of the Community Infrastructure benefits, or will benefit, the Community Property other than the Existing Development and is not considered specific to any one of the Community Property Districts and comprise "projects" as defined in Chapter 190, Florida Statutes.

The second category of improvement is "District Infrastructure" that is made up of improvements necessary to develop properties within any one of the Community Property Districts that would benefit only those properties within that specific Community Property District (and may include the Existing Development). An example of District Infrastructure would be the internal streets,

water, sewer, and drainage for streets within a specific Community Property District. This class of street would typically have residential lots, or individual commercial parcels on each side and direct access onto the street would be allowed.

Both Community Infrastructure and District Infrastructure (collectively "Public Infrastructure") are to be constructed for the benefit of the public. Only those improvements that are determined to be eligible for tax-exempt financing will be funded by the Community Property Districts.

Pursuant to a written interlocal agreement (the "Interlocal Agreement"), the Districts have provided for the implementation of the Community Infrastructure by delegating to one of the Districts (the "Issuer") in the manner set forth in the Interlocal Agreement the authority to finance, acquire and construct such Community Infrastructure within the boundaries of the Districts. The Interlocal Agreement also provides for another of the Districts (the "Administration District") to operate and maintain, on behalf of the Issuer for the benefit of all of the Districts, any portions of the Community Infrastructure not conveyed to another governmental entity. The Issuer may also finance, acquire and construct the infrastructure necessary to serve the property within the boundaries of a specific District (the "District Infrastructure"), subject to the reserved rights of each District to finance the acquisition and construction of its own District Infrastructure. District Infrastructure may be operated and maintained by the Administration District or the applicable District in which such District Infrastructure is located to the extent not conveyed to another governmental entity.

The Community Property will be assessed costs associated with the Public Infrastructure (excluding the Existing Development, in the case of Community Infrastructure) based on its relative benefit as identified in the master assessment methodology report prepared by Fishkind & Associates, Inc. and approved by the Community Property Districts, as supplemented from time to time.

Purpose

The purpose of this report is to modify and restate the scope and costs associated with certain Community Infrastructure Components identified in the Master Engineer's Report to reflect changes in plans and market conditions. All improvements stated in the Summary of Community Infrastructure Components in the Master Engineer's Report and not specifically modified herein shall remain unchanged.

Summary of Community Infrastructure Component Modifications

Community Recreation Complex

The large multi-purpose recreation complex anticipated to utilize as much as 75 gross acres has been scaled back to include a smaller community based park of approximately 20 gross acres similar to other park facilities located in the City of Port St Lucie. It is envisioned that the park could include elements such as, but not limited to, ball fields, tennis courts, picnic area, playground, walking trail, and open space all lighted for limited night time use.

Recreational Trail System

The Master Engineer's Report describes a recreational trail system that is planned to include active parks and an extensive system of trails and improved pedestrian walkways. Due to increased usage and popularity of these type of improvements in developments such as the Development, components of the recreational trail system have been expanded to provide additional opportunities for use throughout the community.

Outdoor Green/Amphitheater

This facility is intended to serve as a gathering place for concerts and other public events. A site for the proposed active park facility has not been determined at this time and it may be incorporated within the active parks contemplated by the recreational trail system category or as part of the community recreation complex. Accordingly, the costs associated with this facility are reflected as a separate line item.

Summary of District Infrastructure Component Modifications

The summary of District Infrastructure Components included in the Master Engineer's Report, dated July 9, 2013 remains unchanged as a result of this report

Summary of Public Infrastructure Costs

Community Infrastructure Costs

| Improvement Category | Developer Contribution | SG CDD Cost | Total |
|------------------------------------------|------------------------|----------------|----------------|
| Onsite Roadways | | \$ 54,148,000 | \$ 54,148,000 |
| Offsite Roadways | | \$ 24,124,000 | \$ 24,124,000 |
| Intersections & Signalization | | \$ 12,700,000 | \$ 12,700,000 |
| Public Water & Sewer Utilities | | \$ 8,193,000 | \$ 8,193,000 |
| Roadway Landscape & Irrigations | | \$ 6,984,000 | \$ 6,984,000 |
| Roadway Lighting | | \$ 5,593,000 | \$ 5,593,000 |
| Water Management Lake Excavation | \$ 330,000 | \$ 16,142,000 | \$ 16,472,000 |
| Control Structures & Interconnect Pipe | | \$ 7,550,000 | \$ 7,550,000 |
| Community Recreation Complex | | \$ 2,664,000 | \$ 2,664,000 |
| Community Green/Amphitheater | | \$ 4,000,000 | \$ 4,000,000 |
| Recreational Trail System | | \$ 4,656,044 | \$ 4,656,044 |
| Master Signage | | \$ 750,000 | \$ 750,000 |
| Environmental Mitigation | \$ 2,793,910 | \$ 5,162,000 | \$ 7,955,910 |
| Subtotal | \$ 3,123,910 | \$ 152,666,044 | \$ 155,789,954 |
| Engineering, Legal, Administration (15%) | | \$ 22,899,907 | \$ 22,899,907 |
| Contingency (10%) | | \$ 15,266,604 | \$ 15,266,604 |
| Total Cost | \$ 3,123,910 | \$ 190,832,555 | \$ 193,956,465 |

The total shown in the SG CDD Cost column above represents a \$50,224,945 reduction in total estimated costs from the July 9, 2013 Master Engineer's Report.

District Infrastructure Costs

| <u>District</u> | <u>Estimated Cost</u> |
|-----------------|-----------------------|
| District 1 | \$2,848,200 |
| District 2 | \$23,897,400 |
| District 3 | \$50,883,000 |
| District 4 | \$57,467,400 |
| District 5 | \$32,407,800 |
| District 6 | \$48,781,800 |

Total Estimated Cost \$216,285,600

The total District Infrastructure cost shown above is based on a total cost of \$60,000 per gross acre and remains unchanged from the July 9, 2013 Master Engineer's Report.

Conclusion

We have reviewed requested modifications as well as the projected cost figures associated with the Public Infrastructure included in this report and have found them to be reasonable for this type of development. The impact of market conditions, increased regulatory actions and other factors affecting the future costs of development cannot be completely assessed and may impact the project over a long period of time.

Assuming project construction will proceed in a timely manner, it is our opinion that the proposed improvements, if constructed and built in substantial accordance with approved plans and specifications, can be completed within the estimated costs and meet their intended function. Where available, existing construction contracts, information from other professional or utility consultants, and contractors, and historical data have been used in preparation of this report. Consultants and contractors who have contributed in providing the cost data included in this report are reputable entities within the Treasure Coast/Port St. Lucie area. It is therefore our opinion that the construction of the Public Infrastructure described herein can be completed at the costs as stated.

Introduction

This report is a Supplement to that certain Second Amended and Restated Master Engineer's Report dated July 9, 2013 (the "Master Engineer's Report"), as supplemented on July 8, 2014 (the "First Supplement") and December 9, 2014 (the "Second Supplement") and collectively with the First Supplement and the Master Engineer's Report, the "Original Engineer's Report". All capitalized terms not otherwise defined herein have the meanings ascribed thereto in the Original Engineer's Report.

As more fully described in the Master Engineer's Report, there are six separate community development districts (CDD No. 1 – CDD No. 6) (collectively, the "Districts") established for the mixed-use development known as "Southern Grove" (the "Development") encompassing approximately 3,606 acres, all located within the City of Port St. Lucie.

The configuration of Southern Grove Community Development Districts Nos. 1 - 6 can be seen in Exhibit A of this report.

As noted in the Master Engineer's Report, certain public infrastructure improvements have been implemented by the City of Port St. Lucie through the City's Southwest Annexation Special Assessment District No. 1 (the "SAD") financed by the issuance of Special Assessment Bonds, Series 2007B (the "SAD Bonds").

Information contained in the Master Engineer's Report sets forth a plan and estimated cost for "Public Infrastructure" improvements necessary to support the property through build out. This area is referred to as "Community Property." CDD Nos. 1-6 are also sometimes referred to collectively as the "Community Property Districts" and each of such districts are sometimes referred to herein as a "Community Property District." The Community Property Districts are depicted on Exhibit A.

For the purposes of the Master Engineer's Report, the Public Infrastructure (hereinafter defined) improvements anticipated for the Community Property Districts are divided into two categories.

The first category is "Community Infrastructure" that is made up of improvements that are needed to serve all of the Community Property. Examples of Community Infrastructure would be major roadways, drainage, water distribution, sewage collection and transmission facilities, lighting, landscape, irrigation, hardscape, buffers, and master directional signage all located within and along the perimeter of the major roadway corridors. Other components of community infrastructure could include the master water management system of lakes, inter-connecting culverts, and control structures necessary to control stormwater runoff. Public facilities, parks, recreational walking trails, environmental mitigation plantings, and preserve areas are also considered to be in this category. Each component of the Community Infrastructure benefits, or will benefit, the Community Property and is not considered specific to any one of the Community Property Districts and comprise "projects" as defined in Chapter 190, Florida Statutes.

The second category of improvement is "District Infrastructure" that is made up of improvements necessary to develop properties within any one of the Community Property Districts that would

benefit only those properties within that specific Community Property District. An example of District Infrastructure would be the internal streets, water, sewer, and drainage for streets within a specific Community Property District. This class of street would typically have residential lots on each side and direct access onto the street would be allowed.

Both Community Infrastructure (CI) and District Infrastructure (DI), (collectively "Public Infrastructure") are to be constructed for the benefit of the public. Only those improvements that are determined to be eligible for tax-exempt financing have been, or will be, funded by the Community Property Districts.

Pursuant to a written interlocal agreement (the "Interlocal Agreement"), the Districts have provided for the implementation of the Community Infrastructure by delegating to one of the Districts (the "Issuer"), in the manner set forth in the Interlocal Agreement, the authority to finance, acquire and construct such Community Infrastructure within the boundaries of the Districts. The Interlocal Agreement also provides for one of the Districts (the "Administration District") to operate and maintain, on behalf of the Issuer for the benefit of all of the Districts, any portions of the Community Infrastructure not conveyed to another governmental entity. The Issuer may also finance, acquire and construct the infrastructure necessary to serve the property within the boundaries of a specific District (the "District Infrastructure"), subject to the reserved rights of each District to finance the acquisition and construction of its own District Infrastructure. District Infrastructure may be operated and maintained by the Administration District or the applicable District in which such District Infrastructure is located to the extent not conveyed to another governmental entity.

The Community Property will be assessed costs associated with the Public Infrastructure based on its relative benefit as identified in the master assessment methodology report prepared by Fishkind & Associates, Inc. and approved by the Community Property Districts, as supplemented from time to time, including as supplemented by a report dated August 1, 2019 prepared by Special District Services, Inc., the current assessment methodology consultant to the Districts.

Southern Grove Community Development District No. 5 ("CDD No. 5") is currently serving as the Issuer under the Interlocal Agreement. It has previously issued its \$2,655,000 in original principal of its Bond Anticipation Note, Series 2014 (Community Infrastructure) (the "2014 CI Note") to finance a portion of the Community Infrastructure, as described in the Second Supplement (the "2014 CI Project"). CDD No. 5 has also issued its \$5,800,000 in original principal amount of its Bond Anticipation Note, Series 2014 (District Infrastructure) (the "2014 DI Note") to finance a portion of its own District Infrastructure (the "2014 DI Project").

Subsequent to the approval of the Original Engineer's Report, the Districts approved certain supplements to the Original Engineer's Report, which, by recent action of the governing boards of the Districts, have been rescinded as of the date hereof.

Subsequent to the Second Supplement, a change occurred in the ownership of a significant portion of the undeveloped land in the Districts (the "Significant Undeveloped Land"). CDD No. 5, as the current "Issuer," the owners of the Significant Undeveloped Land and the Consulting Engineer have formulated a revised Community Infrastructure program, based on the current expected development plan for the Community Property (the "Current Development Plan"), which

results in a significant reduction in the scope and cost of Community Infrastructure, as described herein.

As part of this process, the Consulting Engineer reviewed various matters relating to the 2014 CI Project and the 2014 DI Project. The 2014 CI Project is substantially complete, as more fully described herein. The 2014 DI Project is complete, as more fully described herein.

At the time the 2014 DI Note was issued, the development plan for the undeveloped land in CDD No. 5 was unknown. A significant amount of development has subsequently occurred. As part of its review as described above, the Consulting Engineer has determined that the components of the 2014 DI Project, with the exception of the signage for the Tradition Center for Innovation described in the Second Supplement (the "2014 Signage"), should be re-classified as Community Infrastructure based on the current existing development and future development plans, to the extent known, in CDD No. 5 and the fact that the completed components of the 2014 DI Project (other than the 2014 Signage) are comprised of the same categories of improvements that are classified as Community Infrastructure in the Master Engineer's Report.

Accordingly, the Districts are expected to undertake the proceedings required by applicable law to re-classify the components of the 2014 DI Project, other than the 2014 Signage, as Community Infrastructure and to levy the Community Infrastructure Assessments on the Existing Development in CDD No. 5 (as defined in the Original Engineer's Report), which was not previously subject to non-ad valorem assessments relating to Community Infrastructure. The non-ad valorem assessments relating to the 2014 Signage will be satisfied by application of a portion of the Credit Amount (hereinafter described) to all assessable Community Property.

The Districts have informed the Consulting Engineer that in order to preserve the trust estate pledged to the 2014 CI Note (which consists primarily of non-ad valorem special assessments levied on all assessable Community Property, other than the Existing Development) and the trust estate pledged to the 2014 DI Note (which consists primarily of District Infrastructure Assessments levied on assessable Community Property in CDD No. 5 including the Existing Development), the re-classification of components of the 2014 DI Project and levy of non-ad valorem assessments on the Existing Development in connection with Community Infrastructure will not be effective until the 2014 CI Note and the 2014 DI Note are refunded and the first series of long-term Bonds are issued by CDD No. 5.

Purpose

The purpose of this Supplement is to:

1. Modify and restate the scope and costs associated with the Community Infrastructure components identified in the Original Engineer's Report to reflect changes in ownership of the Significant Undeveloped Lands, the Current Development Plan and market conditions, and the re-classification of portions of the 2014 DI Project as Community Infrastructure. Notwithstanding such modifications and restatements, the remaining categories of Community Infrastructure and District Infrastructure improvements are the same as those addressed in the Master Engineer's Report.

2. Update the status of construction of Community Infrastructure and District Infrastructure.

Summary of Community Infrastructure Component Modifications and Expected Costs

The following reflects modifications to Community Infrastructure from that set forth in the Original Engineer's Report, based on the Current Development Plan for the Community Property:

Onsite Public Roadways

The Residential Collector Roadway extending from E/W 2 southward to Becker Road described in the Original Engineer's Report will now be constructed as part of a roadway system contained within gated private communities and are therefore removed from the scope of Improvements. The expected cost for construction of Onsite Public Roadway as shown in the Master Engineer's Report is reduced as a result of this change.

Offsite Public Roadways

One of the owners of the Significant Undeveloped Land (the "Significant Residential Landowner") currently believes that the demand for non-residential uses that were initially envisioned for the Development may not be as high as anticipated by the prior significant owner of undeveloped Community Property, and that the demand for residential uses in the Development is stronger than had been anticipated by such prior owner. As a result, the Significant Residential Landowner is in the process of amending the land use plan for the portion of the Significant Undeveloped Land it owns to meet the anticipated increase in residential demand. The change in land use and resulting project buildout schedule for the land owned by the Significant Residential Landowner, along with the fact that other DRIs in the area are carrying some of the same offsite roadway improvement requirements as applicable to the Development, may or may not require that two segments of Paar Drive included in the Offsite Roadway costs in the Master Engineer's Report, but located outside the boundaries of the Districts, be constructed prior to Development buildout.

The two segments of Paar Drive that lie outside the Districts' boundaries and their general improvement descriptions included in the Master Engineer's Report are as follows:

Paar Drive: Add two lanes from Rosser Boulevard to Savona Boulevard
(Approx. 1.00 mile)

Paar Drive: Add two lanes from Savona Boulevard to Port St Lucie Boulevard
(Approx. 0.80 miles)

This report shifts the majority of the cost for construction of the two Offsite Paar Drive segments listed above from the Districts, to the Significant Residential Landowner, which is obligated to complete this improvement pursuant to an agreement with CDD No. 5. The total cost of the improvements remains the same, however the costs have been re-

apportioned from the Master Engineer's Report, as shown in the Summary of Public Infrastructure Costs presented later in this report.

Intersection & Signalization

Four intersections previously slated to be signalized as a part of the Residential Collector Roadway corridor will no longer be included in Community Infrastructure and therefore the expected cost for Intersection and Signalization Improvements is reduced from that set forth in the Master Engineer's Report. This cost reduction takes into account costs incurred on similar intersections within the Districts.

Public Water & Sewer Improvements

Based on costs incurred during construction of Public Water and Sewer Improvements to-date, a reduction in the expected cost for construction of future Public Water and Sewer Improvements as set forth in the Master Engineer's Report is being made.

Roadway Landscape & Irrigation Improvements

Roadway Landscape and Irrigation costs associated with the Residential Collector Roadway are removed from the costs reflected in the Master Engineer's Report. As a result of this roadway elimination, the expected cost is reduced from that set forth in the Master Engineer's Report.

Roadway Lighting

Roadway Lighting costs associated with the Residential Collector Roadway as shown in the Master Engineer's Report are removed and, as a result of this roadway elimination, the expected cost is reduced from that set forth in the Master Engineer's Report.

Community Recreation Complex

The Significant Residential Landowner has indicated that it is not interested in this type of complex and would rather provide individual recreational opportunities within the boundaries of its individual residential projects.

Costs related to the community recreational complex are being removed entirely from the costs shown in the Master Engineer's Report and are not shown in the Summary of Public Infrastructure Costs presented in this report.

Outdoor Green/Amphitheater

Similar to the community recreation complex listed in the previous paragraph, the Significant Residential Landowner has indicated that it is not interested in this type of improvement and would rather provide individual recreational facilities within the boundaries of its individual residential projects.

Costs related to the community green/amphitheater are being removed entirely from the costs shown in the Master Engineer's Report and are not shown in the Summary of Public Infrastructure Costs presented in this this report.

Recreational Trail System

The Master Engineer's Report described a recreational trail system planned to include active parks and an extensive system of trails and improved pedestrian walkways. Due to increased usage and popularity of these type of improvements in developments similar to the Development and the elimination of the Community Recreation Complex and Outdoor Green/Amphitheater facilities, it is proposed to expand components of the recreational trail system to provide additional opportunities for use throughout the community. The expected cost shown in the Master Engineer's Report is increased accordingly.

Reclassification of 2014 DI Project

As described above, it is appropriate to re-classify the components of the 2014 DI Project, with the exception of the 2014 Signage, as Community Infrastructure. These re-classified components of the 2014 DI Project are complete and have a cost of \$5,799,990.

In summary, modifications to the Original Engineer's Report have been made to eliminate some Community Infrastructure improvements in their entirety, modify the scope of others, reclassify certain components of the 2014 DI Project and adjust expected construction costs. The current estimated cost of the Community Infrastructure Improvements, including completed components of the 2014 DI Project, is \$138,289,138.

Summary of District Infrastructure Component Modifications

The summary of District Infrastructure Components and projected costs included in the Original Engineer's Report remains unchanged as a result of this report, other than as described above with respect to the re-classification of a portion of the 2014 DI Project as Community Infrastructure. The total District Infrastructure cost shown in the Original Engineer's Report is based on a total cost of \$80,000 per gross acre, which remains unchanged. Notwithstanding the foregoing the Original Engineer's Report is deemed modified as necessary to reflect the re-classification of the components of the 2014 DI Project, other than the 2014 Signage, as Community Infrastructure and to reflect that the Existing Development will not require any District Infrastructure in the future. Accordingly, District Infrastructure in CDD No. 5 will benefit only the assessable lands in CDD No. 5 other than the Existing Development.

Summary of Public Infrastructure Costs

Community Infrastructure

| Improvement Category | Developer Contribution | SG CDD Cost | Total |
|--------------------------------------------------|------------------------|-----------------------|-----------------------|
| Roadways and Related Items | | | |
| Onsite Roadways | | \$ 43,466,720 | \$ 43,466,720 |
| Onsite Roadway Lighting | | \$ 4,009,000 | \$ 4,009,000 |
| Onsite Roadway Landscape & Irrigation | | \$ 5,338,238 | \$ 5,339,238 |
| Onsite Intersections & Signalization | | \$ 9,900,000 | \$ 9,900,000 |
| Offsite Roadways (incl. Landscape & Lighting) | \$ 18,648,640 | \$ 5,000,000 | \$ 23,648,640 |
| Subtotal | | \$ 67,714,958 | \$ 86,363,598 |
| Engineering, Legal, Administration (15%) | \$ 2,797,296 | \$ 10,157,244 | \$ 12,954,540 |
| Contingency (10%) | \$ 1,864,864 | \$ 6,771,496 | \$ 8,636,360 |
| Estimate Subtotal | | \$ 84,643,698 | \$ 107,954,498 |
| Completed Roadways Reclassified DI to CI | | \$ 3,936,240 | \$ 3,936,240 |
| Roadways and Related Items Total | \$ 23,310,800 | \$ 88,579,938 | \$ 111,890,738 |
| Stormwater/Environmental Mitigation | | | |
| Water Management Lake Excavation * | \$ 330,000 | \$ 16,142,000 | \$ 16,472,000 |
| Control Structures & Interconnect Pipe | | \$ 7,550,000 | \$ 7,550,000 |
| Environmental Mitigation * | \$ 2,774,920 | \$ 5,162,000 | \$ 7,936,920 |
| Subtotal | \$ 3,104,920 | \$ 28,854,000 | \$ 31,958,920 |
| Engineering, Legal, Administration (15%) | | \$ 4,328,100 | \$ 4,328,100 |
| Contingency (10%) | | \$ 2,885,400 | \$ 2,885,400 |
| Stormwater/Environmental Mitigation Total | \$ 3,104,920 | \$ 36,067,500 | \$ 39,172,420 |
| Utilities | | | |
| Public Water & Sewer Utilities | | \$ 6,672,360 | \$ 6,672,360 |
| Subtotal | \$ - | \$ 6,672,360 | \$ 6,672,360 |
| Engineering, Legal, Administration (15%) | | \$ 1,000,854 | \$ 1,000,854 |
| Contingency (10%) | | \$ 667,236 | \$ 667,236 |
| Utilities Total | | \$ 8,340,450 | \$ 8,340,450 |
| Recreation Trails/Master Signage | | | |
| Recreational Trail System | | \$ 2,000,000 | \$ 2,000,000 |
| Master Signage | | \$ 750,000 | \$ 750,000 |
| Subtotal | | \$ 2,750,000 | \$ 2,750,000 |
| Engineering, Legal, Administration (15%) | | \$ 412,500 | \$ 412,500 |
| Contingency (10%) | | \$ 275,000 | \$ 275,000 |
| Estimate Subtotal | | \$ 3,437,500 | \$ 3,437,500 |
| Completed Lake Trail Reclassified DI to CI | | \$ 1,863,750 | \$ 1,863,750 |
| Recreation Trails/Master Signage Total | \$ - | \$ 5,301,250 | \$ 5,301,250 |
| Total Cost | \$ 26,416,720 | \$ 138,288,138 | \$ 164,704,858 |

*Contributed by a former significant landowner of Community Property.

District Infrastructure Costs

| <u>District</u> | <u>Estimated Cost</u> |
|-----------------------------|-----------------------|
| District 1 | \$2,848,200 |
| District 2 | \$23,897,400 |
| District 3 | \$50,883,000 |
| District 4 | \$57,467,400 |
| District 5 | \$32,407,800* |
| District 6 | \$48,781,800 |
| Total Estimated Cost | \$216,285,600 |

Note: * Excludes costs associated with the 2014 DI Project, which are being reclassified as Community Infrastructure (other than the 2014 signage), as described herein.

The total District Infrastructure cost shown above is based on a total cost of \$60,000 per gross acre and remains unchanged from the Master Engineer's Report, except to the extent that this Supplement determines that the Existing Development does not require any additional District Infrastructure.

Update on Status of Permitting of Public Infrastructure

The following updates the section of the Master Engineer's Report entitled "Permitting."

Additional permits received for Public Infrastructure improvements since last addressed in the Master Engineer's Report are as follows:

Community Infrastructure

- E/W 3 (Open View Road) – Permitted as a part of the Del Webb Community
SFWMD ERP Permit under Application 181109-6
City of Port St Lucie Approval under Project Number P16-120
Southern Grove CDD Work Authorization 4-3-0117
- TCI Lake Amenity
Southern Grove CDD Work Authorization 5-11-0214
- Discovery Way Extension - Secondary access route to Martin Memorial Hospital
SFWMD ERP Permit under Application 130215-4
City of Port St Lucie Approval under Project Number P13-024
Southern Grove CDD Work Authorization 5-9-0513
- Village Points
SFWMD ERP Permit under Application 140829-16

City of Port St Lucie Approval under Project Number P14-089
Southern Grove CDD Work Authorization 5-12-0614

Update of Land Uses

The table shown below summarizes the current land use plan and compares it to the prior plan for Southern Grove as of the date of the Second Supplement. The updated plan accomplishes the following: (a) increases residential uses; (b) reduces the total square footage of office, research and development uses; and (c) changes the character of the retail uses to suit the needs for an increased number of residences and eliminates the plan for a regional mall.

| Category | 2019 Volume | 2014 Volume | Change |
|--------------------------|-------------|-------------|---------|
| Single-family 55 or Less | 2,154 | 1,600 | 654 |
| Single-family 56-66 | 683 | 1,200 | -537 |
| Single-family 67 or more | 497 | 614 | -117 |
| Multifamily units | 1,594 | 1,972 | -378 |
| Apartment units | 2,480 | 1,502 | 978 |
| Retail square feet | 3,675,075 | 3,650,075 | 25,000 |
| Office square feet | 2,430,728 | 2,180,728 | 250,000 |
| Research & Development | 2,498,602 | 2,333,602 | 165,000 |
| Warehouse/Industrial | 4,583,336 | 4,268,336 | 315,000 |
| Hotel rooms | 791 | 480 | 311 |
| Hospital beds | 300 | 300 | 0 |

Status of 2014 CI Project

The information shown below summarizes the status of the 2014 CI Project.

1. Series 2014 CI Project improvements include improvement of the drainage canal located directly west of Interstate 95 along the Southern Grove perimeter from B Lake, northward approximately 2400 feet, to Tradition Parkway. Improvements include excavation and shaping slopes to match the overall South Florida Water Management District (SFWMD) master stormwater permit and Army Corps of Engineers (ACOE) permitted littoral shelf requirements. This portion of the 2014 CI Project is complete.
2. Series 2014 CI Project improvements include the excavation of one water management lake with a surface area of 3.52 acres, one of the master control structures designated as D-MXD2, and a segment of lake interconnect pipe, all of which are located within the Village Pointe project and form a part of the overall surface water management system referenced above. This portion of the 2014 CI Project is complete.
3. Series 2014 CI Project improvements also include construction of a wetland mitigation area to be owned and operated by and on behalf of the Districts that are required to offset development impact in Phases 1A & 1B of the Southern Grove ACOE permit.

Improvements include approximately 15.4 acres of wetland creation, 24.4 acres of wetland enhancement, and 20.7 acres of upland creation. This project is approximately 65 % complete as of July 9, 2019. The cost of the balance of this component is expected to be approximately \$450,000.

4. Series 2014 CI Project Improvements include clearing and installing fencing along the Southern Grove perimeter adjacent to the west right of way of Interstate 95 from Discovery Way, northward approximately 2400 feet, to Tradition Parkway. The cost of this component of the plan is expected to be approximately \$210,000.

The South Icon Tower included in the 2014 CI Project is not going to be funded with proceeds of the 2014 CI Note. This component of the 2014 CI Project is not needed for the balance of the 2014 CI Project to serve its intended function. This component may be funded by a subsequent series of Bonds issued by one of the Districts.

Status of 2014 DI Project

The 2014 DI Project improvements (all of which, with the exception of the 2014 Signage described in item number 1 below, are being re-classified as Community Infrastructure), are complete and consist of the following:

1. Construction of project identification and directional signage for the Tradition Center for Innovation ("TCI") located in an easement owned by CDD No. 5.
2. Construction within the lake banks around B-Lake in TCI enhancing the lake bank area into a public amenity that will be owned by CDD No. 5 with paved pedestrian pathway, lighting, landscape, hardscape, and irrigation improvements.
3. Construction of approximately 4,000 feet of the public road known as Discovery Way from its current terminus eastward to the property boundary and proceeding northward to provide additional access to Martin Memorial Hospital. Improvements include public two lane roadway, drainage in public roads, signage in public right of way, and striping improvements on public roadway owned by CDD No. 5.
4. Public improvements owned by CDD No. 5 which support the development of six outparcels located in the southwest quadrant of the intersection of Tradition and Village Parkways in Village Pointe, as well as one future development lot designated as Lot 1. Specific improvements include embankment for public roads, construction of approximately 2635 feet of the public roads comprised of a 275 foot extension of Innovation Way, 355 feet of Village Pointe, 980 feet of Village Commons, and 1025 feet of Village Court, utility and drainage improvements in public roads, as well as a full median opening on public Tradition Parkway to provide access to the Village Pointe project.

General Matters Relating to 2014 CI Project, 2014 DI Project and SAD Project

As a result of the implementation of the 2014 CI Project, the 2014 DI Project and the SAD Project, the lands in the Districts that are subject to non-ad valorem special assessments in connection with the 2014 CI Note and 2014 DI Note (and will be subject to non-ad valorem special assessments in connection with future Bonds, as applicable) have received, and upon completion of the Community Infrastructure improvements included in the 2014 CI Project, will receive, the Public Infrastructure and other public improvements needed to serve such lands, without regard to whether additional Community Infrastructure improvements or additional District Infrastructure improvements are hereafter implemented, although such lands will benefit from any additional Community Infrastructure and, in the case of the lands in CDD No. 5 other than the Existing Development, any additional District Infrastructure serving such lands. Any Public Infrastructure not included in the 2014 CI Project, 2014 DI Project or the SAD Project may be provided by the District or any of the other Districts then serving as the Issuer under the Interlocal Agreement and/or owners of land in the Districts and any non-public infrastructure needed to serve such lands has been, and will continue to be provided (in the case of lands not yet developed with end uses), by the owners of such lands.

Conclusion

We have reviewed the listed modifications as well as the projected cost figures associated with the Public Infrastructure included in this Supplement and have found them to be reasonable for this type of development. The impact of market conditions, increased regulatory actions and other factors affecting the future costs of development cannot be completely assessed and may impact the project over a long period of time.

Assuming project construction will proceed in a timely manner, it is our opinion that the proposed Improvements, if constructed and built in substantial accordance with approved plans and specifications, can be completed within the estimated costs and meet their intended function. Where available, existing construction contracts, information from other professional or utility consultants, and contractors, and historical data have been used in preparation of this report. Consultants and contractors who have contributed in providing the cost data included in this report are reputable entities within the Treasure Coast/Port St. Lucie area.

It is therefore our opinion that the construction of the Public Infrastructure described herein can be completed at the cost as stated.

1.0 Introduction

1.1 Purpose

This report updates and supersedes our prior report of February 21, 2013, as updated on April 18, 2013 and May 14, 2013. This update corrects some minor typographical errors, provides a revised preliminary assessment roll and reflects amendments to the Interlocal Agreement (hereinafter defined). Otherwise, this report contains the same information as before. The February 21, 2013 report amends, restates and supersedes our prior report dated October 9, 2012. Since then certain facts have come to our attention supporting the need for this new report. In particular, as discussed more fully below, the existing platted development ("Existing Development") in District No. 5 (as defined below) does not require and will not specially benefit from the Community Infrastructure (as defined below). The installation of Community Infrastructure is not required in connection with the construction of the improvements planned for the Existing Development pursuant to applicable governmental development orders, approvals and permits. Community Infrastructure is required for development of the balance of the Community Property (as defined below) to proceed. The Existing Development will specially benefit from the related "District Infrastructure" (as defined below). Therefore, the Existing Development will only be assessed for District Infrastructure while the balance of the Community Property will be assessed for both Community Infrastructure and for District Infrastructure.

Southern Grove is a master-planned, mixed-use, community (the "Development") comprising +/- 3,606 acres in the City of Port St. Lucie ("City"), as described more fully below. The land within the Development ("Community Property") is located within the boundaries of Southern Grove Community Development District No. 1, Southern Grove Community Development District No. 2, Southern Grove Community Development District No. 3, Southern Grove Community Development District No. 4, Southern Grove Community Development District No. 5 and Southern Grove Community Development District No. 6 (each, a "District" and collectively the "Districts").

This report provides a methodology for allocating non-ad valorem special assessments securing the debt the Districts anticipate incurring to provide public infrastructure improvements to the Community Property. For purposes of this report the term "Public Infrastructure" includes two categories of improvements: (a) "Community Infrastructure" consisting of public infrastructure improvements that specially benefits all of the Community Property except Existing Development and (b) "District Infrastructure" consisting of Public Infrastructure that specially benefits Community Property located only within a specific District. The improvements comprising Public Infrastructure are reflected in the Second Amended and Restated Master Engineer's Report for Public Infrastructure Improvements prepared by ARCADIS US, Inc., consulting engineers to the Districts (the "Master Engineer's Report").

The Districts have entered into a Second Amended and Restated District Development Agreement (the "Interlocal Agreement") pursuant to which the Districts have delegated to one of the Districts in the manner set forth in the Interlocal Agreement (the "Issuer") the right to implement the financing, acquisition and construction of Community Infrastructure on behalf of all the Districts. In addition, pursuant to the Interlocal Agreement, each District has provided for the delegation to the Issuer of the authority to implement the financing, acquisition, and construction of District Infrastructure necessary to serve that delegating District, subject to the reserved rights of each District to finance, acquire, and construct its own District Infrastructure. The Interlocal Agreement also provides for one of the Districts (the "Administration District") to operate and maintain, on behalf of the Issuer, for the benefit of the Districts, any portions of the Community Infrastructure not dedicated to other governmental entities and for the Administration District to operate and maintain, on behalf of a delegating District, all or a portion of the delegating District's District Infrastructure.

It is the Public Infrastructure improvements that will allow the development of Community Property in the Districts. By making development of Community Property within the Districts possible, the Districts create benefits to these properties. The methodology described herein allocates the benefits the Community Property receives from the infrastructure program anticipated to be undertaken by the Districts. In this case, the properties receiving special benefit from the Community Infrastructure include 100% of the developable Community Property that lies within the Districts excluding Existing Development. Because the District Infrastructure required for each District allows the development of the land within the specific District requiring such District Infrastructure, the provision of District Infrastructure creates special benefits to 100% of the developable Community Property that lies within that District including Existing Development.

The City has previously established the Southwest Annexation Special Assessment District No.1 (the "SAD") as a special assessment district under applicable Florida law. The SAD encompasses all of the Community Property. The City issued its Special Assessment Bonds, Series 2007B (the "SAD Bonds") secured primarily by revenues derived from the collection of non-ad valorem special assessments levied by the City on the Community Property (the "SAD Assessments"). The SAD Bonds financed the construction of certain public infrastructure improvements needed to serve the Development (the "SAD Project"). Phase 1 of the SAD Project is complete and some of the Public Infrastructure improvements identified in the Master Engineer's Report will complete or augment those improvements. In addition, the Developer (Tradition Land Company, LLC and its predecessors) contributed capital improvements for the SAD reducing the principal amount of the SAD Bonds that would have otherwise been issued to finance public infrastructure benefiting Community Property. The Districts' Public Infrastructure program has no affect on the SAD.

This report provides a methodology for allocating to the Community Property other than the Existing Development the non-ad valorem special assessments (the "Community Infrastructure Assessments") which will secure debt to be issued by the Issuer on behalf of the Districts to fund all or a portion of the cost of financing the acquisition and construction of the Community Infrastructure (the "Community Infrastructure Indebtedness").

This report also provides a methodology for allocating to the Community Property in each District the non-ad valorem special assessments (the "District Infrastructure Assessments") which will secure debt to be issued by the Issuer (or a specific District) to finance the acquisition and construction of District Infrastructure specially benefitting properties within a specific District (the "District Infrastructure Indebtedness"). This report is designed to conform to the requirements of Chapters 190 and 170, F.S. with respect to special assessments and is consistent with our understanding of the case law on this subject.

The development orders governing the installation of Public Infrastructure and location of development are very flexible for the Development. Therefore, it is not possible to know the precise locations where the real estate products planned for the Development as shown in Table 1 of this Report will be located (the "Planned Uses"), nor is the location of the Planned Uses within each District known at this time with precision, except for the Existing Development as discussed below. As a practical matter, all of the Planned Uses outlined in Table 1 cannot be accommodated within the boundaries of any one of the Districts.

The Districts will collectively adopt a capital improvement program for Public Infrastructure (the "CIP"). With respect to Community Infrastructure included in the CIP, each District will take all actions required by applicable law to provide for the levy (in accordance with this Report) of a maximum aggregate amount of Community Infrastructure Assessments on Community Property specially benefited by the Community Infrastructure (which excludes the Existing Development) to pay (all or any portion) of the Community Infrastructure Indebtedness, as shown in Table 5 (the "Maximum Infrastructure Allocation"). Each of the Districts will recognize that the ultimate Planned Uses to be developed in each District are not now known, other than with respect to the Existing Development. Accordingly, as development of the Community Property occurs, the Community Infrastructure Assessments will be further allocated, in accordance with this Report, including, particularly, Table 13, to the Planned Uses actually developed within the Community Property (other than Planned Uses relating to the Existing Development). The only thing certain at this time is that the Maximum Infrastructure Allocation for all Districts, in the aggregate, cannot be exceeded and that the allocation of Community Infrastructure Assessments to Planned Uses actually developed within the Community Property (excluding Existing Development) and the Planned Uses relating to the Existing Development will occur in accordance with this Report.

Although the Districts will take the actions necessary to levy the Community Infrastructure Assessments, the Interlocal Agreement delegates to the Issuer the authority to direct the Administration District to implement such Community Infrastructure Assessments. This includes, without limitation, the power of the Issuer, at the time it issues Community Infrastructure Indebtedness to finance a portion of Community Infrastructure, to determine the portion of the Maximum Community Infrastructure Allocation to be collected by the Administration District for that specific Community Infrastructure project, the annual installments, if any, in which such sums may be collected, the prepayment provision, discounts, collection fees, and interest rates, and other matters necessary or useful in connection with the Community Infrastructure Assessments, subject to the Community Infrastructure Assessment Proceedings, to the facilitate its issuance of Community Infrastructure Indebtedness. Following issuance of any Community Infrastructure Indebtedness, the Administration District, pursuant to the authority delegated to it by the Interlocal Agreement, will be responsible for implementing the collection and enforcement of Community Infrastructure Assessments, in the manner directed by the Issuer, including determining the allocation of the portion of the Maximum Community Infrastructure Allocation collected from Planned Uses actually developed in the Districts (excluding Planned Uses relating to the Existing Development), subdivision adjustments and other matters necessary or useful to the facilitate its administration of the Community Infrastructure Assessments.

District Infrastructure included in the CIP benefits only properties within a particular District. This infrastructure consists largely of what are usefully characterized as public subdivision improvements which include roadways, stormwater controls, utilities, landscaping and localized amenities.

The Master Engineer's Report has estimated costs for the District Infrastructure on a per acre basis at \$60,000 per gross acre based on recent bids for these types of improvements. Based on that estimate, each District will also take all actions required by applicable law to provide for the levy (in accordance with this Report) of District Infrastructure Assessments on Community Property within its boundaries specially benefited by the District Infrastructure required for that District to pay (all or any portion) of the District Infrastructure Indebtedness relating to that District. Such District Infrastructure Assessments shall be levied by each District based upon the District Infrastructure Cost allocable to each District as shown in Table 6 in this Report, as may be supplemented in the future.

Each of the Districts will recognize that the ultimate Planned Uses to be actually developed in each District are not now known at this time other than the Planned Uses relating to the Existing Development. In addition, the Existing Development still requires and benefits from District Infrastructure. Accordingly, as the Community Property is developed with Planned Uses, the District Infrastructure Assessments will be further allocated, in accordance with this Report to the Planned Uses actually developed on the Community Property in its boundaries (including Planned Uses relating to the Existing Development).

The only thing certain at this time is that the maximum District Infrastructure Assessments levied in each District cannot be exceeded and that the allocation of District Infrastructure Assessments to Planned Uses actually developed within the Community Property or relating to the Existing Development will occur in accordance with this Report.

Subject to the reserved rights of each District to finance, acquire, construct operate and maintain its own District Infrastructure, and although each District will determine and authorize District Infrastructure Assessments, the Interlocal Agreement delegates to the Issuer the authority to implement District Infrastructure Assessments for any of the Districts, upon request of a delegating District, in connection with the Issuer's issuance of District Infrastructure Indebtedness. This authority includes, without limitation, the power of the Issuer to determine, at the time it issues District Infrastructure Indebtedness to finance a portion of District Infrastructure, the annual installments, if any, in which District Infrastructure Assessments may be collected, the prepayment provision, discounts, collection fees, and interest rates, and other matters necessary or useful in connection with the District Infrastructure Assessments, subject to the assessment proceedings adopted by the delegating District.

Following issuance of any District Infrastructure Indebtedness, any District may request the Administration District, pursuant to the authority delegated to it by the Interlocal Agreement, to implement the collection and enforcement of District Infrastructure Assessments.

1.2 Background

The City Council of the City created the Districts by ordinance (Southern Grove Community District No. 5 being the surviving community development district resulting from merger with a community development district initially created by St. Lucie County, Florida). The Districts are contiguous to one another and collectively encompass all +/- 3,606 acres in the Development.

The Districts were established to provide public infrastructure, including, but not necessarily limited to, roadways (within and without the District), water and sewer facilities, a storm water management system, streetscape, landscape, and parks and recreation facilities. The Community Property is planned for the following uses.

Table 1. Development Plan for the Community Property

| <i>Category</i> | <i>Volume*</i> | <i>Acres</i> |

Source: Tradition Land Company, LLC (Note volumes pertain to a variety of development measures)

At the time of this report the land comprising the Existing Development has been platted and sold to third parties along with some of the development rights, as summarized in Table 1. Table 2 summarizes these sales and the entitlements conveyed with these sales.

Table 2. Existing Development

| <i>Existing Development</i> | <i>Volume</i> | <i>Acreage</i> |

| | | ===== |
| Total | | 124.8 |

The Existing Development receives no special benefit from the District's Community Infrastructure. These properties have been and can continue to be developed without the installation of the Community Infrastructure. Therefore, the Existing Development will not be allocated any of the cost associated with the Community Infrastructure. However, the Existing Development does require District Infrastructure to support its development and the construction of the real estate products that are entitled.

Table 3 presents the future planned development for the Community Property, excluding the Existing Development. This land development plan is the simple difference between the development plan for the Community Property shown in Table 1 and the Existing Development displayed in Table 2. The future planned development benefits from Community Infrastructure and from District Infrastructure and will be allocated costs for each.

1.3 Requirements of a Valid Assessment Methodology

Valid special assessments under Florida law require two things. First, the properties assessed must receive a special benefit from the improvements paid for via the assessments. Second, the assessments must be fairly and reasonably allocated to the properties being assessed.

If these two characteristics of valid special assessments are adhered to, Florida law provides wide latitude to legislative bodies, such as the respective Board of Supervisors of the Districts, in approving special assessments. Indeed, Florida courts have found that mathematical perfection is probably impossible, but if reasonable people disagree the assessment will be upheld. Only if the Boards were to act in an arbitrary, capricious or grossly unfair fashion would their assessment methods be overturned.

1.4 Special Benefits and General Benefits

Public Infrastructure improvements create both: (1) special benefits to Community Property (provided with respect to Community Infrastructure only general benefit is conferred upon the Existing Development and with respect to District Infrastructure, such benefit is conferred only on the Community Property in the related District) and (2) general benefits to properties outside the Community Property (provided with respect to District Infrastructure, such general benefits are conferred to properties outside the boundaries of the related District). However, as discussed below, these general benefits are incidental in nature and are readily distinguishable from the special benefits which accrue to Community Property in the manner described above. The CIP described in the Master Engineer's Report (discussed below) enables Community Property to be developed (excluding the Existing Development in the case of Community Infrastructure). Without the CIP there would be insufficient infrastructure to support development of the Community Property (excluding the Existing Development in the case of Community Infrastructure).

There is no doubt that the general public, and property owners outside the Community Property, will benefit from the provision of the CIP (and the Existing Development will benefit in the case of Community Infrastructure). However, these benefits are incidental to the CIP, which is designed solely to meet the needs of Community Property (excluding the Existing Development in the case of Community Infrastructure). Lands outside the Community Property (and the Existing Development in the case of Community Infrastructure). do not depend upon the CIP to obtain, or to maintain, their development entitlements. This fact alone clearly distinguishes the special benefits which developable property in the Community Property (excluding the Existing Development in the case of Community Infrastructure) receives compared to those lying outside of the boundaries of the Community Property and the Existing Development in the case of Community Infrastructure.

Finally, the Financial Advisor has estimated both the cost for the CIP and the dollar value of the benefits created by the CIP. As noted below in Table 4, the total estimated cost of the CIP is \$449,915,700. The Financial Advisor has analyzed the dollar magnitude of the special benefits created by the CIP, measured in terms of the increase in market value resulting from the installation of the CIP. The Financial Advisor has determined that the market value of the Community Property will increase by more than \$1 billion with the full installation of the CIP which exceeds the cost of the CIP (excluding the Existing Development in connection with Community Infrastructure).

This is true in the aggregate, and it is also true for each type of real estate products planned or existing in the Development. The incremental value created for each category of Planned Uses for the Development supported by the CIP and paid for by the Community and the District Infrastructure Assessments is far in excess of its pro rata share of the Community Infrastructure Assessments and the District Infrastructure Assessments.¹

2.0 Assessment Methodology

2.1 Overview

The assessment methodology for allocating the costs of the CIP is essentially a process by which the Districts will allocate the costs associated with the CIP to Community Property benefiting from the CIP on a systems basis as described more fully below. The allocation is based upon the special benefits that each property receives. At the outset, the CIP (as defined in the Master Engineer's Report) is based on the Planned Uses for the Community Property (as shown in Table 1). However, until Final Plats are filed the precise land uses are unknown other than with respect to the Existing Development. Here a Final Plat refers to the ultimate platting of the Planned Uses consistent with: (a) approved site plans for those Planned Uses and (b) any document the Developer officially records showing any transfer of entitlements to the Final Plat. Therefore, the Districts initially will impose Community Infrastructure Assessments on a per gross acre basis on the Community Property (excluding Existing Development) in all the Districts in an amount equal to the Maximum Community Infrastructure Allocation and each District will impose District Infrastructure Assessments on the Community Property in its boundaries in the maximum amounts shown in Table 6. Subsequently, when Final Plats are processed and the exact land uses are known, the Administration District will assign Community Infrastructure Assessments and District Infrastructure Assessments (subject to the reserved rights of each District with respect to District Infrastructure Assessments) to the Final Platted properties in each District (as provided for in the Interlocal Agreement) using the methodology described below.

The numerical analysis provided below is illustrative of the assessment methodology. Since actual costs may vary from the estimates and Planned Uses will likely change over time, the actual figures may change as additional information becomes available. However, the information provided here is the best available at this time.

¹ Fishkind & Associates, Inc. (October 5, 2012), "Analysis of Benefits from the Installation of Public Infrastructure Southern Grove Community Development Districts No. 1-6"

Finally, the assessment methodology contains a critical feature, the True Up Tests ("Tests"). The Tests prevent the debt per acre of unplatted property (that Community Property which has not received its Final Plat) in the Community Property from increasing above its Ceiling Levels. This requirement will be administered by the Administration District on behalf of the Districts.

There are two Tests: (1) for Community Infrastructure Indebtedness and (2) for District Infrastructure Indebtedness. The Tests work in essentially the same manner except that the Test for Community Infrastructure Indebtedness operates at the Community Property level among all Districts while the Test for District Infrastructure Indebtedness is conducted at a District-specific level for Community Property in that District. The Tests are conducted at four intervals based upon the percentage of total acres that are developed within the Community Property in all Districts or within a specific District. The intervals are at 25%, 50%, 75% and 100% of the gross acres within either the Community Property in all Districts or within Community Property in a specific District.

Consider first the Test for the Community Infrastructure Indebtedness. First a Ceiling Amount of debt per acre is established for the aggregate number of acres in all of the Districts (excluding the acres comprising the Existing Development) when the Issuer issues the first series of Community Infrastructure Indebtedness to fund the initial phase of the CIP relating to Community Infrastructure. The Ceiling Amount is equal to the dollar amount of debt divided by the gross acres in all Districts that have not received their Final Plats.

Assume for this example that the Ceiling Amount is initially \$100 per acre. Second, at each of the intervals outlined above the debt per acre of all land without a Final Plat in the Districts must be below \$100 per acre, the Ceiling Amount. If not the Developer, or the responsible landowner seeking the plat, must make a debt reduction payment to bring the amount of debt per undeveloped acre in the Districts below the Ceiling Amount.

Third, from time-to-time the Issuer will issue additional Community Infrastructure Indebtedness to fund additional phases of the CIP relating to Community Infrastructure. Each time the Issuer issues Community Infrastructure Indebtedness, the Ceiling Amount is adjusted to reflect the total amount of debt outstanding for all Community Infrastructure Indebtedness and the total amount of acres that not received Final Plats in all of the Districts, in the aggregate, excluding the Existing Development. Notwithstanding the foregoing, the Community Infrastructure Assessments will not exceed the Maximum Community Infrastructure Allocation and the allocation of Community Infrastructure Assessments to Planned Uses actually developed in the Districts will be consistent with Table 13.

Now consider the Test for the District Infrastructure Indebtedness. The Test works just like the one for Community Infrastructure except that it is District specific. When District Infrastructure Indebtedness is issued, a District Ceiling Amount is established by dividing the number of acres without a Final Plat in the District into the debt issued. When platting in the District reaches 25% of the gross acres in the District, the District True Up Test is conducted to assure that the debt on the land without a Final Plat in the District does not exceed its then applicable District Ceiling Amount. If the test is violated, the Developer, or the responsible landowner seeking the plat, must make a debt reduction payment to bring the debt per acre without a Final Plat below the then applicable District Ceiling Amount. As additional District Infrastructure Indebtedness is issued from time to time, the applicable District Ceiling Amount would be adjusted to an amount equal to the new total debt allocated to properties without a Final Plat divided by the remaining acres without Final Plats in the District. Notwithstanding the foregoing, the District Infrastructure Assessments in a specific District will not exceed the maximum District Infrastructure Assessments for that District shown in Table 6 plus the allocation of District Infrastructure Assessments to Planned Uses actually developed in a District will be consistent with Table 13.

2.2 The Master Engineer's Report for Community Infrastructure and the CIP

The District Engineer has estimated that the cost of the CIP needed to support the land use plan outlined in Table 1 is approximately \$460,000,000 as shown in Table 4.

Table 4. Estimated Costs for the Southern Grove CIP Consisting of Community and District Infrastructure (\$2013)(??)

| <i>Community Infrastructure</i> | <i>Developer Contribution</i> | <i>District Cost</i> | <i>Total</i> |
|--------------------------------------|-------------------------------|----------------------|----------------------|
| Roadways | | \$90,972,000 | \$90,972,000 |
| Storm Water Management | \$3,123,910 | \$28,854,000 | \$31,977,910 |
| Utilities | | \$8,193,000 | \$8,193,000 |
| Parks, Landscape, Amenities, etc. | | \$64,827,000 | \$64,827,000 |

2.3 Financing Plan for the CIP

The Financial Advisor has designed a financing program to provide the construction funds needed for each District's portion of the CIP. Table 5 provides a summary of the financing program needed to fund each District's share of the Community Infrastructure contained in the CIP, and Table 6 displays the financing plan for the District Infrastructure portion of the CIP.

In estimating the Community Infrastructure Indebtedness and the District Infrastructure Indebtedness needed to fund the CIP, the Financial Advisor gross funded the construction fund. Since all the construction funds are not expended immediately, interest is earned on the unexpended balance. These interest earnings are flowed to the capitalized interest fund. The bond sizing includes capitalized interest for 24 months. The debt service reserve account is set initially at the lesser of maximum annual debt service, 10% of the proceeds of the bonds, or 125% of average annual debt service.

The Financial Advisor estimated the underwriter's discount at 1.25%. This allowance pays the underwriter for taking the risks involved in purchasing the District's Community Infrastructure Indebtedness and/or District Infrastructure Indebtedness. The cost of issuance pays for the trustee, financial advisor, and other costs associated with issuing the Community Infrastructure Indebtedness and/or District Infrastructure Indebtedness.

Table 5 shows the financing program totals. However, the debt is expected to be issued in series over a number of years. At this time there is no detailed phasing plan available, instead the debt will be issued based on market conditions and the associated need for infrastructure to support development.

Table 5. Community Infrastructure Bond Financing Program

| <i>Category</i> | <i>Amount</i> |

2.4 Allocation to Benefiting Properties – The Master Methodology for Community Infrastructure

The CIP comprises both Community Infrastructure and District Infrastructure. This section of the report provides a methodology to allocate the costs of the Community Indebtedness based on the benefits of that the Community Infrastructure provides to the Community Property excluding the Existing Development. The methodology for allocating the costs associated with the District Indebtedness incurred to fund the District Infrastructure benefiting District Property is provided in a separate section of the report below.

The discussion offered below illustrates the process by which this report will allocate Community Infrastructure Assessments the revenues of which will secure Community Infrastructure Indebtedness issued to support the Community Infrastructure portion of the CIP. As described above, until such time as Final Plats are recorded, the specific land uses in the Districts are indeterminable, other than with respect to the Existing Development. Therefore, at the outset, the Community Infrastructure Assessments will be allocated on a gross acreage basis across all benefited acres in the Districts (excluding the acres comprising the Existing Development). As Final Platting occurs, the Administration District, on behalf of the Districts, will more finely articulate the allocation of Community Infrastructure Indebtedness to benefiting properties based on Planned Uses actually developed. This will not allow the Community Infrastructure Assessments allocated to the Districts in the aggregate to exceed the Maximum Community Infrastructure Allocation.

As noted above, as long as two basic principles are adhered to, Florida law allows the Boards of the Districts great latitude in determining the appropriate methodology to allocate the costs of the CIP to benefiting properties in the Districts. The two principals are: (1) the properties being assessed must receive a special benefit from the CIP and (2) the assessments allocated to each property must be fairly and reasonably apportioned among the benefiting properties. In allocating special assessment costs to benefiting property Florida governments have used a variety of methods including, but not limited to, front footage, area, trip rates, equivalent residential units, dwelling units, acreage, and value.

The Districts are similar in many ways to other Florida community development districts in that the Community Infrastructure component of the CIP anticipates constructing both public infrastructure and public amenities. Table 4 provided the estimated costs for the CIP shown in the Master Engineer's Report. Based upon the cost estimates in the Master Engineer's Report, and its analysis of the physical properties of the CIP, the Financial Advisor categorized the benefits flowing from the Community component of CIP in Table 7. There are four categories of Community Infrastructure benefiting all Community Property in the Districts other than the Existing Development, which does not received special benefit from the Community Infrastructure: (a) roadways and related items, (b) stormwater management and drainage facilities, (c) utilities, and (d) all other. For purposes of the following discussion of Community Infrastructure references to "Community Property" excludes the Existing Development.

TABLE 7. CATEGORIES OF BENEFITS FROM THE COMMUNITY COMPONENT OF THE CIP

| INFRASTRUCTURE | ALLOCATION METHOD |
|----------------------------|--------------------------|
| Roadways and related items | Trip generation |
| Stormwater management | Weighted acres |
| Utilities | Equivalent unit |
| All other infrastructure | Equivalent unit |

First, roadways and related items, such as signalization, are designed to accommodate the estimated traffic generated by the land use program for the Development. Therefore, it is reasonable to allocate the costs for this class of infrastructure on the basis of trips generated by each land use. The Development Order governing the entitlements and real estate development in the Development was recently amended with the new land use plan presented in Table 1. As part of the permitting a detailed traffic analysis was included in the documentation. The trip rates used in the allocation of costs associated with the roadway portion of the CIP were taken from the traffic study. However, rental apartments were not specifically analyzed as part of the traffic study.

The rental apartments are designed to provide for housing needs of those working in the Development. Therefore, the Financial Advisor has determined that the internal capture rate of trips for the apartments will be higher than the average for the broader multifamily category and should be reduced. As a result, the trip rate for the remaining multifamily products, which are expected to be for-sale townhomes and condominiums, must be increased. The Financial Advisor has determined the trip rates for the for-sale multifamily product category using rates published by Institute of Traffic Engineers (“ITE”)².

Second, the CIP includes the stormwater management system for the Community Property. The benefits from this system relate to its capacity to protect the properties from flooding. The more stormwater run off a land use generates the more benefit it receives from the stormwater management system. Every land use type has a particular run off coefficient measuring its average run off volume. In addition, each land use category has a specific acreage. The product of the runoff coefficient and the acreage results in the weighted acreage amount used for allocation purposes.

Third, the CIP includes utilities consisting of water transmission lines and wastewater collection lines both on and off-site. The utility system lines are sized to accommodate all of the demands on the system based on estimated usage. The Equivalent Residential Unit (ERU) method was used to measure the benefits from the utility system lines. A single-family unit in the category of 55-to-65 foot wide lot was used as the standard of measurement. Larger homes are constructed on larger lots and typically require more utility capacity, while smaller homes require less capacity. The multifamily product is expected to be largely townhomes sized for utility capacity like a standard size home on a 55-65 foot wide lot. The apartments are smaller and thereby require roughly half of the resources of a single-family unit. Retail users were allocated 1 ERU per 2,000 square feet reflecting the intensity of use for retail land uses. Offices were allocated 1 ERU per 3,000 square feet making this category roughly equal to the average square feet in a single-family home. Each hotel room was allocated ½ ERU per room on the basis of the intensity of use for a hotel. Finally, each hospital bed was assigned 10 ERU based in the intensity of use for these facilities.

Finally, all other infrastructure consists of landscaping and other costs. The benefits from these facilities are most equitably allocated on the basis of ERUs. The ERUs are determined by lot widths for the residential products and ERU sizing for the non residential products in a manner similar to the utility ERU assignments.

² Institute of Traffic Engineers (2012) Trip Generation 8th Edition, Washington, D.C.

Table 8 provides a complete outline of the estimated costs for all of the Community Infrastructure improvements comprising the CIP. Soft costs for design, contingency, and financing are included. These costs are categorized based on the types of improvements and their benefits as discussed above. It is these costs that are allocated to the benefiting properties in the Districts.

2.5 Debt Allocation for Community Infrastructure

The costs shown in Table 8 for the Community Infrastructure improvements reflect the total construction costs for all phases of the CIP. Although this infrastructure will be constructed over time in phases, it is actually designed for and will operate as a consistent system serving all of the Community Property in the Districts. For example, the roadway system will be constructed in phases. However, the entire system will specially benefit all the developable property in the Districts excluding Existing Development. Improvements built in Phase 1 will benefit properties developed in Phase 1 and in future phases. Likewise, properties developed in Phase 1 will benefit from roadway improvements constructed in Phase 2. This pattern is also true for all of the other major infrastructure systems comprising the master portion of the CIP.

As a result, the most equitable way in which to allocate the benefits of these systems of master infrastructure improvements is on a systems basis. In other words the benefits from the system are examined on a total systems basis and the properties that receive these benefits are also viewed on a total basis. Thus, if the cost of an infrastructure system totals \$10 and is funded in two series of bonds and if these costs were allocable equally to 10 acres of property, the allocation would be \$1 per acre.

The reality is that the costs are not proportionately distributed across all phase of the construction program. Furthermore, the benefiting properties will not all be developed in an equal proportionate fashion. The costs are unevenly distributed over time and the development program is not evenly distributed. Thus, if the costs of the CIP were allocated strictly on a phase-by-phase basis only to those properties developed during that phase, the cost per acre or per equivalent unit would vary significantly across the three phases. This would be patently inequitable.

Therefore, the most equitable methodology is to utilize the systems approach. As discussed below, the benefits flowing from CIP are viewed on a systems basis and are allocated systematically to all benefiting properties regardless of their phasing. In this way, similar properties receiving similar benefits will be allocated the same amount of debt.

The exact nature and precise location of the development that actually occurs is unknown at this time, and it is only determined at the time of a Final Plat when the land uses are known with precision. As a practical matter, the assessments are applied on a first Final Platted first allocated basis. The numerical examples provided below illustrate how this methodology is designed to work.

Table 8. Cost on a Fully Financed Basis for Community Infrastructure Categorized by Type of Improvement

| Functional Allocations | Cost | As Financed |
|---------------------------|----------------------|----------------------|
| Roadway and related items | \$90,972,000 | \$119,254,336 |
| Stormwater management | \$28,854,000 | \$37,824,436 |
| Utilities | \$8,193,000 | \$10,740,126 |
| Landscape and Other | \$113,038,500 | \$148,181,102 |
| | ===== | ===== |
| Total | \$241,057,500 | \$316,000,000 |

Table 9 outlines the allocation of the costs to Community Property for roadways and related services included in Community Infrastructure. As noted above in Table 8, the cost for the roadways and related facilities totals \$119,254,336. These costs are allocated based upon the estimated volume of trips (as described above) that each land use generates on the Community roadway system.

TABLE 9. COST ALLOCATION TO BENEFITING PROPERTIES FOR ROADWAYS AND RELATED IMPROVEMENTS

| Land Use | Volume | Trip rate | Trips | % Trips | Allocation |
|------------------------------|-----------|-----------|----------------|----------------|----------------------|
| Single-family <55 | 1,500 | 7.86 | 11,787 | 6.74% | \$8,041,519 |
| Single-family 55-65 | 1,200 | 7.86 | 9,430 | 5.39% | \$6,433,215 |
| Single-family >65 | 614 | 7.86 | 4,825 | 2.76% | \$3,291,662 |
| Multifamily units | 1,972 | 5.90 | 11,635 | 6.66% | \$7,937,723 |
| Apartment Units unplatted | 1,502 | 2.95 | 4,431 | 2.53% | \$3,022,936 |
| Retail unplatted square feet | 3,660,075 | 0.019 | 70,402 | 40.28% | \$48,030,891 |
| Office square feet | 2,180,728 | 0.01 | 13,966 | 7.99% | \$9,527,830 |
| Research unplatted sqft | 2,333,602 | 0.01 | 13,186 | 7.54% | \$8,996,280 |
| Warehouse unplatted sqft | 4,433,336 | 0.007 | 30,856 | 17.65% | \$21,051,201 |
| Hotel rooms unplatted | 480 | 8.92 | 4,282 | 2.45% | \$2,921,078 |
| | | | ===== | ===== | ===== |
| Total | | | 174,798 | 100.00% | \$119,254,336 |

Table 10 displays the allocation of costs for the Community stormwater management facilities. These are allocated to benefiting properties based upon their size and their run off coefficients.

TABLE 10. COST TO ALL BENEFITING PROPERTIES FOR STORMWATER MANAGEMENT FACILITIES

| <i>Land Use</i> | <i>Units</i> | <i>Acres</i> | <i>Runoff rate</i> | <i>Weighted Units</i> | <i>% Weighted Units</i> | <i>Allocation</i> |
|------------------------------|--------------|--------------|--------------------|-----------------------|-------------------------|-------------------|
| Single-family <55 | 1,500 | 214 | 0.5 | 107 | 8.74% | \$3,304,414 |
| Single-family 55-65 | 1,200 | 200 | 0.5 | 100 | 8.15% | \$3,084,120 |
| Single-family >65 | 614 | 123 | 0.5 | 61 | 5.01% | \$1,893,650 |
| Multifamily units | 1,972 | 247 | 0.7 | 173 | 14.07% | \$5,321,649 |
| Apartment Units unplatted | 1,502 | 135 | 0.7 | 95 | 7.71% | \$2,918,091 |
| Retail unplatted square feet | 3,660,075 | 209 | 0.7 | 147 | 11.96% | \$4,522,548 |
| Office square feet | 2,180,728 | 129 | 0.7 | 91 | 7.39% | \$2,794,912 |
| Research unplatted sqft | 2,333,602 | 129 | 0.7 | 91 | 7.39% | \$2,793,596 |
| Warehouse unplatted sqft | 4,433,336 | 500 | 0.7 | 350 | 28.56% | \$10,801,993 |
| Hotel rooms unplatted | 480 | 18 | 0.7 | 13 | 1.03% | \$389,463 |
| | | | | ===== | ===== | ===== |
| Total | | | | 1,226 | 100.00% | \$37,824,436 |

Table 11 displays the allocation for the utility portion of the CIP. As noted above, the benefits from these facilities are measured on the basis of ERUs

TABLE 11. COST ALLOCATION TO BENEFITING PROPERTIES FOR UTILITIES

| <i>Land Use</i> | <i>Units</i> | <i>ERU/unit</i> | <i>ERUs</i> | <i>% ERUs</i> | <i>Allocation</i> |
|------------------------------|--------------|-----------------|-------------|---------------|-------------------|
| Single-family <55 | 1,500 | 0.75 | 1,125 | 11.44% | \$1,228,736 |
| Single-family 55-65 | 1,200 | 1.00 | 1,200 | 12.20% | \$1,310,652 |
| Single-family >65 | 614 | 1.25 | 768 | 7.81% | \$838,271 |
| Multifamily units | 1,972 | 1.00 | 1,972 | 20.05% | \$2,153,838 |
| Apartment Units unplatted | 1,502 | 0.50 | 751 | 7.64% | \$820,250 |
| Retail unplatted square feet | 3,660,075 | 2,000 | 1,830 | 18.61% | \$1,998,785 |
| Office square feet | 2,180,728 | 3,000 | 727 | 7.39% | \$793,938 |
| Research unplatted sqft | 2,333,602 | 3,001 | 778 | 7.91% | \$849,311 |
| Warehouse unplatted sqft | 4,433,336 | 10,000 | 443 | 4.51% | \$484,213 |
| Hotel rooms unplatted | 480 | 0.50 | 240 | 2.44% | \$262,130 |
| | | | ===== | ===== | ===== |
| Total | | | 9,833 | 100.00% | \$10,740,126 |

Finally, the other infrastructure costs are allocated on the basis of ERUs in Table 12. The ERU classification differs from that used for utilities, because the types and characteristics of this other infrastructure is different. This category's costs are dominated by landscaping and the recreational complex which provides relatively less benefit to commercial properties and to the hospital compared to the residential properties.

**TABLE 12. COST ALLOCATION TO BENEFITING PROPERTIES
FOR OTHER FACILITIES**

| <i>Land Use</i> | <i>Units</i> | <i>ERU/unit</i> | <i>ERUs</i> | <i>% ERUs</i> | <i>Allocation</i> |
|----------------------------|--------------|-----------------|-------------|---------------|-------------------|
| Single-family <55 | 1,500 | 0.75 | 1,125 | 13.03% | \$19,313,267 |
| Single-family 55-65 | 1,200 | 1.50 | 1,800 | 20.85% | \$30,901,227 |
| Single-family >65 | 614 | 2.00 | 1,228 | 14.23% | \$21,081,504 |
| Multifamily units | 1,972 | 0.60 | 1,183 | 13.71% | \$20,312,407 |
| Apartment Units total | 1,502 | 0.25 | 376 | 4.35% | \$6,446,339 |
| Retail square feet total | 3,660,075 | 5,000.00 | 732 | 8.48% | \$12,566,757 |
| Office square feet | 2,180,728 | 3,000.00 | 727 | 8.42% | \$12,479,106 |
| Research square feet total | 2,333,602 | 3,001.00 | 778 | 9.01% | \$13,349,470 |
| Warehouse sqft total | 4,433,336 | 10,000.00 | 443 | 5.14% | \$7,610,862 |
| Hotel rooms total | 480 | 0.50 | 240 | 2.78% | \$4,120,164 |
| | | | ===== | ===== | ===== |
| Total | | | 8,632 | 100.00% | \$148,181,102 |

Table 13 brings these cost allocations together. Summing the allocations for each component of the CIP provides the total costs. These are also broken down by cost per unit. As each plat is presented to the Administration District, the figures in Table 13 are used to assign a portion of the costs for the Community Infrastructure improvements contained in the CIP to that plat and to its actual land uses.

**TABLE 13. TOTAL COST ALLOCATION TO BENEFITING
PROPERTIES FOR ALL COMMUNITY INFRASTRUCTURE FACILITIES**

| <i>Land Use</i> | <i>Volume</i> | <i>Total Allocation</i> | <i>Per Unit</i> |
|----------------------------|---------------|-----------------------------|-----------------|
| Single-family <55 | 1,500 | \$31,887,937 | \$21,259 |
| Single-family 55-65 | 1,200 | \$41,729,215 | \$34,774 |
| Single-family >65 | 614 | \$27,105,087 | \$44,145 |
| Multifamily units | 1,972 | \$35,725,617 | \$18,116 |
| Apartment Units total | 1,502 | \$13,207,617 | \$8,793 |
| Retail square feet total | 3,660,075 | \$67,118,981 | \$18 |
| Office square feet | 2,180,728 | \$25,595,786 | \$12 |
| Research square feet total | 2,333,602 | \$25,988,658 | \$11 |
| Warehouse sqft total | 4,433,336 | \$39,948,270 | \$9 |
| Hotel rooms total | 480 | \$7,692,834 | \$16,027 |
| | | ===== | |
| Total | | \$316,000,000 | |

The Maximum Community Infrastructure Allocation for the Districts is shown in Table 13. This is based on the as-financed cost of the Districts' portion of the Community Infrastructure components of the CIP shown in Table 4 needed to support the Planned Uses of the Community Property as summarized in Table 3. Table 13 further presents the allocation of the Maximum Community Infrastructure Allocation to the Planned Uses in the Development, based on Table 3.

As noted above, the only thing certain at this time is that the Maximum Infrastructure Allocation for all Districts, in the aggregate, cannot be exceeded and that the allocation of Community Infrastructure Assessments to Planned Uses actually developed within the Community Property will occur in accordance with this Report. Until Final Platting and development activities progress, it is not possible at this time to provide a more precise estimate of the Maximum Community Infrastructure Allocation per individual District.

3.0 Assessment Methodology for District Infrastructure

3.1 Overview/District Infrastructure

In addition to the Community Infrastructure component of the CIP as described above, any of the Districts may wish to undertake District Infrastructure improvements that specially benefit only land within their boundaries. In such a case, the Issuer, for itself, or on behalf of each other District electing to undertake a District Infrastructure project (subject to each of such District's reserved rights to finance the acquisition and construction of its own District Infrastructure), would issue District Infrastructure Indebtedness to finance such District Infrastructure and the applicable District will levy District Infrastructure Assessments on benefiting property within its boundaries for the repayment of such District Infrastructure Indebtedness. This report shall also serve as the methodology for allocating District Infrastructure Assessments in the event a District issues District Infrastructure Indebtedness directly to finance its own District Infrastructure.

District Infrastructure benefits only properties within a particular District. This infrastructure consists largely of what are usefully characterized as public subdivision improvements which include roadways, stormwater controls, utilities, landscaping and localized amenities. The Master Engineer's Report has estimated these costs on a per acre basis at \$60,000 per gross acre based on recent bids for these types of improvements. The total estimated cost for the District Infrastructure is \$286,865,000 as shown above in Table 6.

The specific character of these District Improvements will vary somewhat on a project-by-project basis. Therefore, the precise allocation of costs associated with these District Improvements will also vary somewhat as will the scope of properties within a District that receives the special benefits from these District Improvements.

Nevertheless, it is the intent of this Report that the basic allocation procedures used for the Community Infrastructure will also be used to allocate costs associated with the District Infrastructure. Thus, the benefits of District roadway improves are to be allocated based on trip volumes from benefiting properties. Stormwater benefits are to be allocated based on weighted acreage associated with run off. Utilities and all other District Infrastructure will be allocated using the ERU method.

As each particular component of District Infrastructure is financed, a supplemental assessment report will be approved by the District involved reflecting the specific nature of those improvements.

As noted above, using the Master Engineer's Report estimate of District Infrastructure Costs on a per acre basis of \$60,000 per gross acre, each District will levy District Infrastructure Assessments on Community Property in its boundaries in the maximum amounts shown in Table 6 in this Report, as may be supplemented in the future, and as shall be allocated to Planned Uses actually developed in each District in accordance with the allocation methodology set forth in this Report, including, particularly, Table 13. The only thing certain at this time is that the maximum District Infrastructure Assessments levied in each District cannot be exceeded and that the allocation of District Infrastructure Assessments to Planned Uses actually developed within the Community Property in each District will occur in accordance with this Report.

4.0 True Up Mechanism

The financing plan to support the Community Infrastructure and the District Infrastructure are each subject to separate Tests as outlined above. The Tests prevent the debt per acre of land without a Final Plat in the Community Property (excluding the Existing Development) from increasing above its Ceiling Levels. This requirement will be administered by the Administration District on behalf of the Districts (or by a specific District if it issues District Infrastructure Indebtedness directly, rather than through the Issuer) .

There are two Tests: (1) for Community Infrastructure Indebtedness and (2) for District Infrastructure Indebtedness. The Tests work in essentially the same manner except that the Test for Community Infrastructure Indebtedness operates at the Community Property level while the Test for District Infrastructure Indebtedness is conducted at the level of the Community Property within a specific District. The Tests are conducted at four intervals based upon the percentage of total acres that have Final Plats within the Community Property in all Districts or with respect to the Community Property within a specific District. The intervals are at 25%, 50%, 75% and 100% of the gross acres within either the Community Property in all Districts or with respect to the Community Property within a specific District.

Consider the Test for the Community Infrastructure Indebtedness. First a Ceiling Amount of debt per acre is established for all of the Districts when the Issuer issues the first series of Community Infrastructure Indebtedness to fund the initial phase of the CIP relating to Community Infrastructure. The Ceiling Amount is equal to the dollar amount of debt divided by the gross acres in all Districts that have not received a Final Plat.

Second, at each of the intervals outlined above the debt per acre on the property without a Final Plat in all of the Districts must be below the Ceiling Amount. If not the Developer or the responsible landowner seeking the plat, must make a debt reduction payment to bring the amount of debt per acre without Final Plats in all of the Districts below the Ceiling Amount. The obligation to make a debt reduction payment is strictly on the entity seeking to have the plat approved. Third, from time-to-time the Issuer may issue additional Community Infrastructure Indebtedness to fund additional phases of the CIP relating to Community Infrastructure. Each time the Issuer issues Community Infrastructure Indebtedness, the Ceiling Amount is adjusted to reflect the total amount of debt outstanding for all Community Infrastructure Indebtedness and the total amount of acres that remain without Final Plats in all of the Districts. Notwithstanding the foregoing, the Community Infrastructure Assessments will not exceed the Maximum Community Infrastructure Allocation.

Now consider the Test for the District Infrastructure Indebtedness. The Test works just like the one for Community Infrastructure except that it is District specific. When District Infrastructure Indebtedness is issued, a District Ceiling Amount is established by dividing the number of acres in the District into the debt issued. When Final Platting in the District reaches 25% of the gross acres in the District, the District True Up Test is conducted to assure that the debt on the acres in the District without Final Plats do not exceed its then applicable District Ceiling Amount. If the test is violated, the Developer, or the then responsible landowner seeking the plat, must make a debt reduction payment to bring the debt per acre without a Final Plat below the then applicable District Ceiling Amount.

As additional District Infrastructure Indebtedness is issued from time to time, the applicable District Ceiling Amount would be adjusted to an amount equal to the new total debt allocated to properties without Final Plats divided by the remaining acres in the District without Final Plats.

5.0 Prepayment of Community Infrastructure Assessments

The Developer will contribute to the Issuer certain Community Infrastructure (the “Contributed Community Infrastructure”) consisting of an excavated lake in Southern Grove Community Development District No. 5, having a cost of \$330,000 and 279.39 acres of property for use for water management, conservation, and mitigation necessary for the Districts to install their stormwater management system. Although this land has a fair market value in excess of \$15,000 per acre according to the St. Lucie County Property Appraiser, the Developer has agreed to accept a value per acre of \$10,000, or less following a formal appraisal of the property by the Issuer, for the purposes of this contribution. The estimated total value of the contribution of the land is \$2,793,910 at \$10,000 per acre subject to downward adjustment upon final appraisal of the land included in the Contributed Community Infrastructure.

The Developer and the Issuer, on behalf of all the Districts, will enter into an agreement to provide, among other matters, that the Contributed Community Infrastructure will be deemed to be a prepayment of Community Infrastructure Assessments levied on specified Community Property within the boundaries of Southern Grove Community Development District No. 5 other than the Existing Development (the “Prepayment Properties”) in an amount equal to the value of the Contributed Community Infrastructure. Such prepayment will be deemed to occur at the time the Issuer receives delivery of the related Contributed Community Infrastructure.

Table 14. Community Infrastructure Contributions by the Developer

| <i>Developer Contributions</i> | <i>Cost</i> |
|--------------------------------|-------------|
| Lake Excavation | \$330,000 |
| Conservation/Mitigation Land | \$2,793,910 |
| | ===== |
| Total | \$3,123,910 |

6.0 Tax Roll

Based on the analysis presented above, Table 15 provides the preliminary tax roll for the District's assessment liens. Table 16 presents the estimated annual debt service payments associated with the liens including administrative fees. The administrative fees include an allowance of 4% reflecting the ability of landowners to receive a 4% discount for the early payment of property taxes including the assessments as well as the charges by the St. Lucie County Property Tax Appraiser and the Property Tax Collectors Offices for their services in assessing the properties and collecting the assessments.

7.0 Validation Recommendation

The Financial Advisor recommends that the Districts validate bonds in an amount sufficient to fund the CIP. Table 17 summarizes the total amounts based on the analysis provided above. In light of the uncertainties and the lengthy time horizon involved, the Financial Advisor recommends validating \$610,000,000 in bonds.

TABLE 17. RECOMMENDED AMOUNT FOR VALIDATION

| <i>Category</i> | <i>Amount</i> |
|--------------------------|---------------|
| Community Infrastructure | \$316,000,000 |
| District Infrastructure | \$286,865,000 |
| Contingency | \$7,135,000 |
| | ===== |
| Total | \$610,000,000 |

SUPPLEMENTAL ASSESSMENT METHODOLOGY REPORT FOR PUBLIC INFRASTRUCTURE

SOUTHERN GROVE COMMUNITY DEVELOPMENT DISTRICTS NOS. 1-6

July 8, 2014

Prepared for

**Board of Supervisors
Southern Grove Community Development Districts Nos. 1-6**

Prepared by

**Fishkind & Associates, Inc.

**SUPPLEMENTAL ASSESSMENT METHODOLOGY REPORT
FOR PUBLIC INFRASTRUCTURE
SOUTHERN GROVE COMMUNITY DEVELOPMENT DISTRICTS NOS. 1-6**

July 8, 2014

1.0 Introduction

1.1 Purpose

This report supplements the “Amended and Restated Master Assessment Methodology Report for Public Infrastructure” dated July 9, 2013 (“Prior Report”). Since the Prior Report was issued, market conditions have changed. Large and expensive public amenities, such as the community recreation complex have fallen out of favor and trial systems and amphitheaters have become more popular. As a result, the Developer of Southern Grove (Tradition Land Company, LLC or “TLC”) has requested that the Districts adjust the Capital Improvement Plan (“CIP”) and assessments accordingly. The purpose of this supplemental report is to reflect changes in the scope and cost of certain categories of Community Infrastructure included in the CIP, as reflected in Table 4. The provisions of this supplemental report supersede any inconsistent provisions of the Prior Report. Except as superseded hereby, the Prior Report remains in effect.

1.2 Background

There are six community development districts (“CDDs”) in the Southern Grove portion of the Tradition development project. These six CDDs have entered into a Second Amended and Restated District Development Agreement (the “Interlocal Agreement”) pursuant to which the Districts have delegated to the “Issuer”, initially Southern Grove Community Development District No. 5, the right to implement the financing, acquisition and construction of Community Infrastructure on behalf of all the Districts. In addition, pursuant to the Interlocal Agreement, each District has provided for the delegation to the Issuer of the authority to implement the financing, acquisition, and construction of District Infrastructure necessary to serve that delegating District, subject to the reserved rights of each District to finance, acquire, and construct its own District Infrastructure.

The Interlocal Agreement also provides for one of the Districts (the "Administration District") to operate and maintain, on behalf of the Issuer, for the benefit of the Districts, any portions of the Community Infrastructure not dedicated to other governmental entities and for the Administration District to operate and maintain, on behalf of a delegating District, all or a portion of the delegating District's District Infrastructure. Southern Grove Community Development District No. 1 was initially designated as the Administration District.

2.0 Assessment Methodology

2.1 Overview

The assessment methodology for allocating the costs of the CIP is essentially a process by which the Districts will allocate the costs associated with the CIP to Community Property benefiting from the CIP on a systems basis as described more fully below. The allocation is based upon the special benefits that each property receives. At the outset, the CIP (as defined in the Master Engineer's Report) is based on the Planned Uses for the Community Property (as shown in Table 1). However, until Final Plats are filed the precise land uses are unknown other than with respect to the Existing Development. Here a Final Plat refers to the ultimate platting of the Planned Uses consistent with: (a) approved site plans for those Planned Uses and (b) any document the Developer officially records showing any transfer of entitlements to the Final Plat. Therefore, the Districts initially will impose Community Infrastructure Assessments on a per gross acre basis on the Community Property (excluding Existing Development) in all the Districts in an amount equal to the Maximum Community Infrastructure Allocation and each District will impose District Infrastructure Assessments on the Community Property in its boundaries in the maximum amounts shown in Table 6. Subsequently, when Final Plats are processed and the exact land uses are known, the Administration District will assign Community Infrastructure Assessments and District Infrastructure Assessments to the Final Platted properties in each District (as provided for in the Interlocal Agreement) using the methodology described below.

The numerical analysis provided below is illustrative of the assessment methodology. Since actual costs may vary from the estimates and Planned Uses will likely change over time, the actual figures may change as additional information becomes available. However, the information provided here is the best available at this time.

Finally, the assessment methodology contains a critical feature, the True Up Tests ("Tests"). The Tests prevent the debt per acre of unplatted property (that Community Property which has not received its Final Plat) in the Community Property from increasing above its Ceiling Levels. This requirement will be administered by the Administration District on behalf of the Districts.

There are two Tests: (1) for Community Infrastructure Indebtedness and (2) for District Infrastructure Indebtedness. The Tests work in essentially the same manner except that the Test for Community Infrastructure Indebtedness operates at the Community Property level among all Districts while the Test for District Infrastructure Indebtedness is conducted at a District-specific level for Community Property in that District.

The Tests are conducted at four intervals based upon the percentage of total acres that are developed within the Community Property in all Districts or within a specific District. The intervals are at 25%, 50%, 75% and 100% of the gross acres within either the Community Property in all Districts or within Community Property in a specific District.

Consider first the Test for the Community Infrastructure Indebtedness. First a Ceiling Amount of debt per acre is established for the aggregate number of acres in all of the Districts (excluding the acres comprising the Existing Development) when the Issuer issues the first series of Community Infrastructure Indebtedness to fund the initial phase of the CIP relating to Community Infrastructure. The Ceiling Amount is equal to the dollar amount of debt divided by the gross acres in all Districts that have not received their Final Plats.

Assume for this example that the Ceiling Amount is initially \$100 per acre. Second, at each of the intervals outlined above the debt per acre of all land without a Final Plat in the Districts must be below \$100 per acre, the Ceiling Amount. If not the Developer, or the responsible landowner seeking the plat, must make a debt reduction payment to bring the amount of debt per undeveloped acre in the Districts below the Ceiling Amount.

Third, from time-to-time the Issuer will issue additional Community Infrastructure Indebtedness to fund additional phases of the CIP relating to Community Infrastructure. Each time the Issuer issues Community Infrastructure Indebtedness, the Ceiling Amount is adjusted to reflect the total amount of debt outstanding for all Community Infrastructure Indebtedness and the total amount of acres that not received Final Plats in all of the Districts, in the aggregate, excluding the Existing Development. Notwithstanding the foregoing, the Community Infrastructure Assessments will not exceed the Maximum Community Infrastructure Allocation and the allocation of Community Infrastructure Assessments to Planned Uses actually developed in the Districts will be consistent with Table 13.

Now consider the Test for the District Infrastructure Indebtedness. The Test works just like the one for Community Infrastructure except that it is District specific. When District Infrastructure Indebtedness is issued, a District Ceiling Amount is established by dividing the number of acres without a Final Plat in the District into the debt issued. When platting in the District reaches 25% of the gross acres in the District, the District True Up Test is conducted to assure that the debt on the land without a Final Plat in the District does not exceed its then applicable District Ceiling Amount. If the test is violated, the Developer, or the responsible landowner seeking the plat, must make a debt reduction payment to bring the debt per acre without a Final Plat below the then applicable District Ceiling Amount.

As additional District Infrastructure Indebtedness is issued from time to time, the applicable District Ceiling Amount would be adjusted to an amount equal to the new total debt allocated to properties without a Final Plat divided by the remaining acres without Final Plats in the District. Notwithstanding the foregoing, the District Infrastructure Assessments in a specific District will not exceed the maximum District Infrastructure Assessments for that District shown in Table 6 plus the allocation of District Infrastructure Assessments to Planned Uses actually developed in a District will be consistent with Table 13.

2.2 The Master Engineer's Report for Community Infrastructure and the CIP

The District Engineer has estimated that the cost of the CIP needed to support the land use plan outlined in Table 1 is approximately \$410,000,000 as shown in Table 4.

Table 4. Estimated Costs for the Southern Grove CIP Consisting of Community and District Infrastructure (\$2014)

| <i>Infrastructure</i> | <i>Developer Contribution</i> | <i>District Cost</i> | <i>Total</i> |
|-----------------------------------|-------------------------------|----------------------|---------------|
| Community Infrastructure | | | |
| Roadways | \$0 | \$129,436,250 | \$129,436,250 |
| Storm Water Management | \$3,123,910 | \$36,067,500 | \$39,191,410 |
| Utilities | \$0 | \$10,241,250 | \$10,241,250 |
| Parks, Landscape, Amenities, etc. | \$0 | \$15,087,555 | \$15,087,555 |

Note: The costs for engineering, legal, administrative, and a contingency allowance amounting to a total of 25% was applied to each cost category of Community Infrastructure. These costs are not included in District Infrastructure

2.3 Financing Plan for the CIP

The Financial Advisor has designed a financing program to provide the construction funds needed for each District's portion of the CIP. Table 5 provides a summary of the financing program needed to fund each District's share of the Community Infrastructure contained in the CIP, and Table 6 displays the financing plan for the District Infrastructure portion of the CIP.

In estimating the Community Infrastructure Indebtedness and the District Infrastructure Indebtedness needed to fund the CIP, the Financial Advisor gross funded the construction fund. Since all the construction funds are not expended immediately, interest is earned on the unexpended balance. These interest earnings are flowed to the capitalized interest fund. The bond sizing includes capitalized interest for 24 months. The debt service reserve account is set initially at the lesser of maximum annual debt service, 10% of the proceeds of the bonds, or 125% of average annual debt service.

The Financial Advisor estimated the underwriter's discount at 1.25%. This allowance pays the underwriter for taking the risks involved in purchasing the District's Community Infrastructure Indebtedness and/or District Infrastructure Indebtedness. The cost of issuance pays for the trustee, financial advisor, and other costs associated with issuing the Community Infrastructure Indebtedness and/or District Infrastructure Indebtedness.

Table 5 shows the financing program totals. However, the debt is expected to be issued in series over a number of years. At this time there is no detailed phasing plan available, instead the debt will be issued based on market conditions and the associated need for infrastructure to support development.

Table 5. Community Infrastructure Bond Financing Program

| <i>Category</i> | <i>Amount</i> |

2.4 Allocation to Benefiting Properties – The Master Methodology for Community Infrastructure

The CIP comprises both Community Infrastructure and District Infrastructure. This section of the report provides a methodology to allocate the costs of the Community Indebtedness based on the benefits of that the Community Infrastructure provides to the Community Property excluding the Existing Development. The methodology for allocating the costs associated with the District Indebtedness incurred to fund the District Infrastructure benefiting District Property is provided in a separate section of the report below.

The discussion offered below illustrates the process by which this report will allocate Community Infrastructure Assessments the revenues of which will secure Community Infrastructure Indebtedness issued to support the Community Infrastructure portion of the CIP. As described above, until such time as Final Plats are recorded, the specific land uses in the Districts are indeterminable, other than with respect to the Existing Development. Therefore, at the outset, the Community Infrastructure Assessments will be allocated on a gross acreage basis across all benefited acres in the Districts (excluding the acres comprising the Existing Development).

As Final Platting occurs, the Administration District, on behalf of the Districts, will more finely articulate the allocation of Community Infrastructure Indebtedness to benefiting properties based on Planned Uses actually developed. This will not allow the Community Infrastructure Assessments allocated to the Districts in the aggregate to exceed the Maximum Community Infrastructure Allocation.

As noted above, as long as two basic principles are adhered to, Florida law allows the Boards of the Districts great latitude in determining the appropriate methodology to allocate the costs of the CIP to benefiting properties in the Districts. The two principals are: (1) the properties being assessed must receive a special benefit from the CIP and (2) the assessments allocated to each property must be fairly and reasonably apportioned among the benefiting properties. In allocating special assessment costs to benefiting property Florida governments have used a variety of methods including, but not limited to, front footage, area, trip rates, equivalent residential units, dwelling units, acreage, and value.

The Districts are similar in many ways to other Florida community development districts in that the Community Infrastructure component of the CIP anticipates constructing both public infrastructure and public amenities. Table 4 provided the estimated costs for the CIP shown in the Master Engineer's Report. Based upon the cost estimates in the Master Engineer's Report, and its analysis of the physical properties of the CIP, the Financial Advisor categorized the benefits flowing from the Community component of CIP in Table 7. There are four categories of Community Infrastructure benefiting all Community Property in the Districts other than the Existing Development, which does not received special benefit from the Community Infrastructure: (a) roadways and related items, (b) stormwater management and drainage facilities, (c) utilities, and (d) all other. For purposes of the following discussion of Community Infrastructure references to "Community Property" excludes the Existing Development.

TABLE 7. CATEGORIES OF BENEFITS FROM THE COMMUNITY COMPONENT OF THE CIP

| INFRASTRUCTURE | ALLOCATION METHOD |
|----------------------------|--------------------------|
| Roadways and related items | Trip generation |
| Stormwater management | Weighted acres |
| Utilities | Equivalent unit |
| All other infrastructure | Equivalent unit |

First, roadways and related items, such as signalization, are designed to accommodate the estimated traffic generated by the land use program for the Development. Therefore, it is reasonable to allocate the costs for this class of infrastructure on the basis of trips generated by each land use.

The Development Order governing the entitlements and real estate development in the Development was recently amended with the new land use plan presented in Table 1. As part of the permitting a detailed traffic analysis was included in the documentation. The trip rates used in the allocation of costs associated with the roadway portion of the CIP were taken from the traffic study. However, rental apartments were not specifically analyzed as part of the traffic study. The rental apartments are designed to provide for housing needs of those working in the Development. Therefore, the Financial Advisor has determined that the internal capture rate of trips for the apartments will be higher than the average for the broader multifamily category and should be reduced. As a result, the trip rate for the remaining multifamily products, which are expected to be for-sale townhomes and condominiums, must be increased. The Financial Advisor has determined the trip rates for the for-sale multifamily product category using rates published by Institute of Traffic Engineers ("ITE")¹.

Second, the CIP includes the stormwater management system for the Community Property. The benefits from this system relate to its capacity to protect the properties from flooding. The more stormwater run off a land use generates the more benefit it receives from the stormwater management system. Every land use type has a particular run off coefficient measuring its average run off volume. In addition, each land use category has a specific acreage. The product of the runoff coefficient and the acreage results in the weighted acreage amount used for allocation purposes.

Third, the CIP includes utilities consisting of water transmission lines and wastewater collection lines both on and off-site. The utility system lines are sized to accommodate all of the demands on the system based on estimated usage. The Equivalent Residential Unit (ERU) method was used to measure the benefits from the utility system lines. A single-family unit in the category of 55-to-65 foot wide lot was used as the standard of measurement. Larger homes are constructed on larger lots and typically require more utility capacity, while smaller homes require less capacity. The multifamily product is expected to be largely townhomes sized for utility capacity like a standard size home on a 55-65 foot wide lot. The apartments are smaller and thereby require roughly half of the resources of a single-family unit. Retail users were allocated 1 ERU per 2,000 square feet reflecting the intensity of use for retail land uses. Offices were allocated 1 ERU per 3,000 square feet making this category roughly equal to the average square feet in a single-family home. Each hotel room was allocated ½ ERU per room on the basis of the intensity of use for a hotel. Finally, each hospital bed was assigned 10 ERU based in the intensity of use for these facilities.

¹ Institute of Traffic Engineers (2012) Trip Generation 8th Edition, Washington, D.C.

Finally, all other infrastructure consists of landscaping and other costs. The benefits from these facilities are most equitably allocated on the basis of ERUs. The ERUs are determined by lot widths for the residential products and ERU sizing for the nonresidential products in a manner similar to the utility ERU assignments.

Table 8 provides a complete outline of the estimated costs for all of the Community Infrastructure improvements comprising the CIP. Soft costs for design, contingency, and financing are included. These costs are categorized based on the types of improvements and their benefits as discussed above. It is these costs that are allocated to the benefiting properties in the Districts.

2.5 Debt Allocation for Community Infrastructure

The costs shown in Table 8 for the Community Infrastructure improvements reflect the total construction costs for all phases of the CIP. Although this infrastructure will be constructed over time in phases, it is actually designed for and will operate as a consistent system serving all of the Community Property in the Districts. For example, the roadway system will be constructed in phases. However, the entire system will specially benefit all the developable property in the Districts excluding Existing Development. Improvements built in Phase 1 will benefit properties developed in Phase 1 and in future phases. Likewise, properties developed in Phase 1 will benefit from roadway improvements constructed in Phase 2. This pattern is also true for all of the other major infrastructure systems comprising the master portion of the CIP.

As a result, the most equitable way in which to allocate the benefits of these systems of master infrastructure improvements is on a systems basis. In other words the benefits from the system are examined on a total systems basis and the properties that receive these benefits are also viewed on a total basis. Thus, if the cost of an infrastructure system totals \$10 and is funded in two series of bonds and if these costs were allocable equally to 10 acres of property, the allocation would be \$1 per acre.

The reality is that the costs are not proportionately distributed across all phase of the construction program. Furthermore, the benefiting properties will not all be developed in an equal proportionate fashion. The costs are unevenly distributed over time and the development program is not evenly distributed. Thus, if the costs of the CIP were allocated strictly on a phase-by-phase basis only to those properties developed during that phase, the cost per acre or per equivalent unit would vary significantly across the three phases. This would be patently inequitable.

Therefore, the most equitable methodology is to utilize the systems approach. As discussed below, the benefits flowing from CIP are viewed on a systems basis and are allocated systematically to all benefiting properties regardless of their phasing. In this way, similar properties receiving similar benefits will be allocated the same amount of debt.

The exact nature and precise location of the development that actually occurs is unknown at this time, and it is only determined at the time of a Final Plat when the land uses are known with precision. As a practical matter, the assessments are applied on a first Final Platted first allocated basis. The numerical examples provided below illustrate how this methodology is designed to work.

Table 8. Cost on a Fully Financed Basis for Community Infrastructure Categorized by Type of Improvement

| Functional Allocations | Cost | As Financed |
|---------------------------|----------------------|----------------------|
| Roadway and related items | \$111,049,750 | \$139,460,627 |
| Stormwater management | \$27,245,800 | \$34,216,343 |
| Utilities | \$9,421,950 | \$11,832,454 |
| Landscape and Other | \$43,115,055 | \$54,145,576 |
| | ===== | ===== |
| Total | \$190,832,555 | \$239,655,000 |

Table 9 outlines the allocation of the costs to Community Property for roadways and related services included in Community Infrastructure. As noted above in Table 8, the cost for the roadways and related facilities totals \$139,460,627. These costs are allocated based upon the estimated volume of trips (as described above) that each land use generates on the Community roadway system.

TABLE 9. COST ALLOCATION TO BENEFITING PROPERTIES FOR ROADWAYS AND RELATED IMPROVEMENTS

| Land Use | Volume | Trip rate | Trips | % Trips | Allocation |
|------------------------------|-----------|-----------|--------|---------|--------------|
| Single-family <55 | 1,500 | 7.86 | 11,787 | 6.74% | \$9,404,063 |

| | | | | ===== | ===== | ===== |
| Total | | | | 1,226 | 100.00% | \$34,216,343 |

Table 11 displays the allocation for the utility portion of the CIP. As noted above, the benefits from these facilities are measured on the basis of ERUs

TABLE 11. COST ALLOCATION TO BENEFITING PROPERTIES FOR UTILITIES

| <i>Land Use</i> | <i>Units</i> | <i>ERU/unit</i> | <i>ERUs</i> | <i>% ERUs</i> | <i>Allocation</i> |
|------------------------------|--------------|-----------------|-------------|---------------|-------------------|
| Single-family <55 | 1,500 | 0.75 | 1,125 | 11.44% | \$1,353,705 |
| Single-family 55-65 | 1,200 | 1.00 | 1,200 | 12.20% | \$1,443,952 |
| Single-family >65 | 614 | 1.25 | 768 | 7.81% | \$923,528 |
| Multifamily units | 1,972 | 1.00 | 1,972 | 20.05% | \$2,372,895 |
| Apartment Units unplatted | 1,502 | 0.50 | 751 | 7.64% | \$903,674 |
| Retail unplatted square feet | 3,660,075 | 2,000 | 1,830 | 18.61% | \$2,202,072 |
| Office square feet | 2,180,728 | 3,000 | 727 | 7.39% | \$874,685 |
| Research unplatted sqft | 2,333,602 | 3,001 | 778 | 7.91% | \$935,691 |
| Warehouse unplatted sqft | 4,433,336 | 10,000 | 443 | 4.51% | \$533,461 |
| Hotel rooms unplatted | 480 | 0.50 | 240 | 2.44% | \$288,790 |
| | | | ===== | ===== | ===== |
| Total | | | 9,833 | 100.00% | \$11,832,454 |

Finally, the other infrastructure costs are allocated on the basis of ERUs in Table 12. The ERU classification differs from that used for utilities, because the types and characteristics of this other infrastructure is different. This category's costs are dominated by landscaping and the recreational complex which provides relatively less benefit to commercial properties and to the hospital compared to the residential properties.

TABLE 12. COST ALLOCATION TO BENEFITING PROPERTIES FOR OTHER FACILITIES

| <i>Land Use</i> | <i>Units</i> | <i>ERU/unit</i> | <i>ERUs</i> | <i>% ERUs</i> | <i>Allocation</i> |
|----------------------------|--------------|-----------------|-------------|---------------|-------------------|
| Single-family <55 | 1,500 | 0.75 | 1,125 | 13.03% | \$7,057,094 |
| Single-family 55-65 | 1,200 | 1.50 | 1,800 | 20.85% | \$11,291,350 |
| Single-family >65 | 614 | 2.00 | 1,228 | 14.23% | \$7,703,210 |
| Multifamily units | 1,972 | 0.60 | 1,183 | 13.71% | \$7,422,181 |
| Apartment Units total | 1,502 | 0.25 | 376 | 4.35% | \$2,355,501 |
| Retail square feet total | 3,660,075 | 5,000.00 | 732 | 8.48% | \$4,591,910 |
| Office square feet | 2,180,728 | 3,000.00 | 727 | 8.42% | \$4,559,882 |
| Research square feet total | 2,333,602 | 3,001.00 | 778 | 9.01% | \$4,877,914 |
| Warehouse sqft total | 4,433,336 | 10,000.00 | 443 | 5.14% | \$2,781,019 |
| Hotel rooms total | 480 | 0.50 | 240 | 2.78% | \$1,505,513 |
| | | | ===== | ===== | ===== |
| Total | | | 8,632 | 100.00% | \$54,145,576 |

Table 13 brings these cost allocations together. Summing the allocations for each component of the CIP provides the total costs. These are also broken down by cost per unit. As each plat is presented to the Administration District, the figures in Table 13 are used to assign a portion of the costs for the Community Infrastructure improvements contained in the CIP to that plat and to its actual land uses.

The Maximum Community Infrastructure Allocation for the Districts is shown in Table 13. This is based on the as-financed cost of the Districts' portion of the Community Infrastructure components of the CIP shown in Table 4 needed to support the Planned Uses of the Community Property as summarized in Table 3. Table 13 further presents the allocation of the Maximum Community Infrastructure Allocation to the Planned Uses in the Development, based on Table 3.

TABLE 13. TOTAL COST ALLOCATION TO BENEFITING PROPERTIES FOR ALL COMMUNITY INFRASTRUCTURE FACILITIES

| <i>Land Use</i> | <i>Volume</i> | <i>Total Allocation</i> | <i>Per Unit</i> | <i>Estimated Annual Assessment*</i> |
|----------------------------|---------------|-------------------------|-----------------|-------------------------------------|
| Single-family 55 or Less | 1,500 | \$20,804,067 | \$13,869 | \$1,117.68 |
| Single-family 56-65 | 1,200 | \$23,048,477 | \$19,207 | \$1,547.83 |
| Single-family >65 | 614 | \$14,189,148 | \$23,109 | \$1,862.30 |
| Multifamily units | 1,972 | \$23,891,770 | \$12,116 | \$976.34 |
| Apartment Units total | 1,502 | \$9,434,046 | \$6,281 | \$506.16 |
| Retail square feet total | 3,660,075 | \$67,054,302 | \$18 | \$1.48 |
| Office square feet | 2,180,728 | \$19,105,084 | \$9 | \$0.71 |
| Research square feet total | 2,333,602 | \$18,861,317 | \$8 | \$0.65 |
| Warehouse sqft total | 4,433,336 | \$37,704,153 | \$9 | \$0.69 |
| Hotel rooms total | 480 | \$5,562,636 | \$11,589 | \$933.90 |
| | | ===== | | |
| Total | | \$239,655,000 | | |

* Note the estimated annual assessment is without administrative charges

As noted above, the only thing certain at this time is that the Maximum Infrastructure Allocation for all Districts, in the aggregate, cannot be exceeded and that the allocation of Community Infrastructure Assessments to Planned Uses actually developed within the Community Property will occur in accordance with this Report. Until Final Platting and development activities progress, it is not possible at this time to provide a more precise estimate of the Maximum Community Infrastructure Allocation per individual District.

3.0 Assessment Methodology for District Infrastructure

3.1 Overview/District Infrastructure

In addition to the Community Infrastructure component of the CIP as described above, any of the Districts may wish to undertake District Infrastructure improvements that specially benefit only land within their boundaries. In such a case, the Issuer, for itself, or on behalf of each other District electing to undertake a District Infrastructure project (subject to each of such District's reserved rights to finance the acquisition and construction of its own District Infrastructure), would issue District Infrastructure Indebtedness to finance such District Infrastructure and the applicable District will levy District Infrastructure Assessments on benefiting property within its boundaries for the repayment of such District Infrastructure Indebtedness.

District Infrastructure benefits only properties within a particular District. This infrastructure consists largely of what are usefully characterized as public subdivision improvements which include roadways, stormwater controls, utilities, landscaping and localized amenities. The Master Engineer's Report has estimated these costs on a per acre basis at \$60,000 per gross acre based on recent bids for these types of improvements. The total estimated cost for the District Infrastructure is \$286,865,000 as shown above in Table 6.

The specific character of these District Improvements will vary somewhat on a project-by-project basis. Therefore, the precise allocation of costs associated with these District Improvements will also vary somewhat as will the scope of properties within a District that receives the special benefits from these District Improvements.

Nevertheless, it is the intent of this Report that the basic allocation procedures used for the Community Infrastructure will also be used to allocate costs associated with the District Infrastructure. Thus, the benefits of District roadway improves are to be allocated based on trip volumes from benefiting properties. Stormwater benefits are to be allocated based on weighted acreage associated with run off. Utilities and all other District Infrastructure will be allocated using the ERU method.

As each particular component of District Infrastructure is financed, a supplemental assessment report will be approved by the District involved reflecting the specific nature of those improvements.

As noted above, using the Master Engineer's Report estimate of District Infrastructure Costs on a per acre basis of \$60,000 per gross acre, each District will levy District Infrastructure Assessments on Community Property in its boundaries in the maximum amounts shown in Table 6 in this Report, as may be supplemented in the future, and as shall be allocated to Planned Uses actually developed in each District in accordance with the allocation methodology set forth in this Report, including, particularly, Table 13. The only thing certain at this time is that the maximum District Infrastructure Assessments levied in each District cannot be exceeded and that the allocation of District Infrastructure Assessments to Planned Uses actually developed within the Community Property in each District will occur in accordance with this Report.

4.0 True Up Mechanism

The financing plan to support the Community Infrastructure and the District Infrastructure are each subject to separate Tests as outlined above. The Tests prevent the debt per acre of land without a Final Plat in the Community Property (excluding the Existing Development) from increasing above its Ceiling Levels. This requirement will be administered by the Administration District on behalf of the Districts (or by a specific District if it issues District Infrastructure Indebtedness directly, rather than through the Issuer).

There are two Tests: (1) for Community Infrastructure Indebtedness and (2) for District Infrastructure Indebtedness. The Tests work in essentially the same manner except that the Test for Community Infrastructure Indebtedness operates at the Community Property level while the Test for District Infrastructure Indebtedness is conducted at the level of the Community Property within a specific District. The Tests are conducted at four intervals based upon the percentage of total acres that have Final Plats within the Community Property in all Districts or with respect to the Community Property within a specific District. The intervals are at 25%, 50%, 75% and 100% of the gross acres within either the Community Property in all Districts or with respect to the Community Property within a specific District.

Consider the Test for the Community Infrastructure Indebtedness. First a Ceiling Amount of debt per acre is established for all of the Districts when the Issuer issues the first series of Community Infrastructure Indebtedness to fund the initial phase of the CIP relating to Community Infrastructure. The Ceiling Amount is equal to the dollar amount of debt divided by the gross acres in all Districts that have not received a Final Plat.

Second, at each of the intervals outlined above the debt per acre on the property without a Final Plat in all of the Districts must be below the Ceiling Amount. If not the Developer or the responsible landowner seeking the plat, must make a debt reduction payment to bring the amount of debt per acre without Final Plats in all of the Districts below the Ceiling Amount. The obligation to make a debt reduction payment is strictly on the entity seeking to have the plat approved. Third, from time-to-time the Issuer will issue additional Community Infrastructure Indebtedness to fund additional phases of the CIP relating to Community Infrastructure. Each time the Issuer issues Community Infrastructure Indebtedness, the Ceiling Amount is adjusted to reflect the total amount of debt outstanding for all Community Infrastructure Indebtedness and the total amount of acres that remain without Final Plats in all of the Districts. Notwithstanding the foregoing, the Community Infrastructure Assessments will not exceed the Maximum Community Infrastructure Allocation.

Now consider the Test for the District Infrastructure Indebtedness. The Test works just like the one for Community Infrastructure except that it is District specific. When District Infrastructure Indebtedness is issued, a District Ceiling Amount is established by dividing the number of acres in the District into the debt issued. When Final Platting in the District reaches 25% of the gross acres in the District, the District True Up Test is conducted to assure that the debt on the acres in the District without Final Plats do not exceed its then applicable District Ceiling Amount. If the test is violated, the Developer, or the then responsible landowner seeking the plat, must make a debt reduction payment to bring the debt per acre without a Final Plat below the then applicable District Ceiling Amount. As additional District Infrastructure Indebtedness is issued from time to time, the applicable District Ceiling Amount would be adjusted to an amount equal to the new total debt allocated to properties without Final Plats divided by the remaining acres in the District without Final Plats.

5.0 Prepayment of Community Infrastructure Assessments

The Developer will contribute to the Issuer and/or the Administration District, on behalf of the other Districts, certain Community Infrastructure (the "Contributed Community Infrastructure") consisting of an excavated lake in Southern Grove Community Development District No. 5, having a cost of \$330,000 and 279.39 acres of property for use for water management, conservation, and mitigation necessary for the District to install its stormwater management system. Although this land has a fair market value in excess of \$15,000 per acre according to the St. Lucie County Property Appraiser, the Developer has agreed to accept a value per acre of \$10,000, or less following a formal appraisal of the property by The Administration District, for the purposes of this contribution. The estimated total value of the contribution of the land is \$2,793,910 at \$10,000 per acre subject to downward adjustment upon final appraisal of the land included in the Contributed Community Infrastructure.

The Developer and the Administration District., on behalf of all the Districts, will enter into an agreement to provide, among other matters, that the Contributed Community Infrastructure will be deemed to be a prepayment of Community Infrastructure Assessments levied on specified Community Property within the boundaries of Southern Grove Community Development District No. 5 other than the Existing Development (the "Prepayment Properties") in an amount equal to the value of the Contributed Community Infrastructure. Such prepayment will be deemed to occur at the time the Issuer and/or the Administration District receives delivery of the related Contributed Community Infrastructure.

Table 14. Community Infrastructure Contributions by the Developer

| <i>Developer Contributions</i> | <i>Cost</i> |
|--------------------------------|-------------|
| Lake Excavation | \$330,000 |
| Conservation/Mitigation Land | \$2,793,910 |
| | ===== |
| Total | \$3,123,910 |

SOUTHERN GROVE COMMUNITY DEVELOPMENT DISTRICTS NOS. 1-6

August 1, 2019

1.0 Introduction

1.1 Background

This report (the "Report") supplements the "Amended and Restated Master Assessment Methodology Report for Public Infrastructure" dated July 9, 2013 (the "Master Report"), as supplemented by the "Supplemental Assessment Methodology Report for Public Infrastructure" dated July 8, 2014 (the "First Supplement"), as further supplemented by the "Second Supplemental Assessment Report for Public Infrastructure" dated December 9, 2014 (the "Second Supplement" and, together with the Master Report and the First Supplement, the "Prior Assessment Report"). Subsequent to the date of the Second Supplement, the Districts (hereinafter defined) approved certain supplements to the Prior Assessment Report, which, by recent action of the governing boards of the Districts, have been rescinded. All capitalized terms not otherwise defined herein have the meanings ascribed thereto in the Prior Assessment Report.

The configuration of Southern Grove Community Development Districts Nos. 1 - 6 (collectively, the "Districts") can be seen in Exhibit A of the "Supplement to Master Engineer's Report" dated August 1, 2019 (the "Supplemental Engineer's Report") prepared by Arcadis US, Inc., the District's Consulting Engineers (the "Consulting Engineers"). The Supplemental Engineer's Report supplements the "Second Amended and Restated Master Engineer's Report" dated July 9, 2013 (the "Master Engineer's Report"), as supplemented on July 8, 2014 (the "First Supplement") and December 9, 2014 (the "Second Supplement" and, collectively with the First Supplement and the Master Engineer's Report, the "Original Engineer's Report").

Information contained in the Original Engineer's Report sets forth a plan and estimated cost for "Public Infrastructure" improvements necessary to support the property through build out. This area is referred to as "Community Property." The Districts are also sometimes referred to collectively as the "Community Property Districts" and each of such districts are sometimes referred to herein as a "Community Property District."

As noted in the Original Engineer's Report, certain public infrastructure improvements have been implemented by the City of Port St. Lucie (the "City") through the City's Southwest Annexation Special Assessment District No. 1 (the "SAD") financed by the issuance of Special Assessment Bonds, Series 2007B (the "SAD Bonds").

For the purposes of the Original Engineer's Report, the Public Infrastructure (hereinafter defined) anticipated for the Community Property Districts is divided into two categories.

The first category is "Community Infrastructure" that is made up of improvements that are needed to serve all of the Community Property. Examples of Community Infrastructure would be major roadways, drainage, water distribution, sewage collection and transmission facilities, lighting, landscape, irrigation, hardscape, buffers, and master directional signage all located within and along the perimeter of the major roadway corridors. Other components of Community Infrastructure could include the master water management system of lakes, inter-connecting culverts, and control structures necessary to control stormwater runoff. Public facilities, parks, recreational walking trails, environmental mitigation plantings, and preserve areas are also considered to be in this category. Each component of the Community Infrastructure benefits, or will benefit, the Community Property and is not considered specific to any one of the Community Property Districts and comprise "projects" as defined in Chapter 190, Florida Statutes.

The second category of improvement is "District Infrastructure" that is made up of improvements necessary to develop properties within any one of the Community Property Districts that would benefit only those properties within that specific Community Property District and comprise "projects" as defined in Chapter 190, Florida Statutes. An example of District Infrastructure would be the internal streets, water, sewer, and drainage for streets within a specific Community Property District. This class of street would typically have residential lots on each side and direct access onto the street would be allowed.

Both Community Infrastructure and District Infrastructure (collectively "Public Infrastructure") are to be constructed for the benefit of the public. Only those improvements that are determined to be eligible for tax-exempt financing have been or will be funded by the Community Property Districts.

Pursuant to a written interlocal agreement (the "Interlocal Agreement"), the Districts have provided for the implementation of the Community Infrastructure by delegating to one of the Districts (the "Issuer"), in the manner set forth in the Interlocal Agreement, the authority to finance, acquire and construct such Community Infrastructure within the boundaries of the Districts. The Interlocal Agreement also provides for one of the Districts (the "Administration District") to operate and maintain, on behalf of the Issuer for the benefit of all of the Districts, any portions of the Community Infrastructure not conveyed to another governmental entity. The Issuer may also finance, acquire and construct District Infrastructure, subject to the reserved rights of each District to finance the acquisition and construction of its own District Infrastructure. District Infrastructure may be operated and maintained by the Administration District or the applicable District in which such District Infrastructure is located to the extent not conveyed to another governmental entity.

Southern Grove Community Development District No. 5 ("CDD No. 5") is currently serving as the Issuer under the Interlocal Agreement. It has previously issued its \$2,655,000 in original principal of its Bond Anticipation Note, Series 2014 (Community Infrastructure) (the "2014 CI Note") to finance a portion of the Community Infrastructure, as described in the Second Supplement (the "2014 CI Project"). CDD No. 5 has also issued its \$5,800,000 in original principal amount of its Bond Anticipation Note, Series 2014 (District Infrastructure) (the "2014 DI Note") to finance a portion of its own District Infrastructure (the "2014 DI Project"), as described in the Second Supplement.

In addition, subsequent to the date of the Second Supplement, a change occurred in the ownership of a significant portion of the undeveloped land in the Districts (the "Significant Undeveloped Land"). CDD No. 5, as the current "Issuer," the owners of the Significant Undeveloped Land, and the Consulting Engineer have formulated a revised Community Infrastructure program, based on the current expected development plan for the Community Property (the "Current Development Plan"), which results in a significant reduction in the scope and cost of Community Infrastructure, as described in the Supplemental Engineer's Report.

As part of this process, the Consulting Engineer reviewed various matters relating to the 2014 CI Project and the 2014 DI Project. The 2014 CI Project is substantially complete and the 2014 DI Project is complete, as more fully described in the Supplemental Engineer's Report.

The Supplemental Engineer's Report notes that at the time the 2014 DI Note was issued, the development plan for the undeveloped land in CDD No. 5 was unknown and that a significant amount of development has subsequently occurred. As part of its review as described above, the Consulting Engineers have determined in the Supplemental Engineer's Report that the components of the 2014 DI Project, with the exception of the signage for the Tradition Center for Innovation described in the Supplemental Engineer's Report (the "2014 Signage"), should be re-classified as Community Infrastructure, based on the current known development and future development plans, to the extent known, in CDD No. 5 and the fact that the completed components of the 2014 DI Project (other than the 2014 Signage) are comprised of the same categories of improvements that are classified as Community Infrastructure in the Master Engineer's Report.

Accordingly, the Districts are expected to undertake the proceedings required by applicable law to re-classify the components of the 2014 DI Project, other than the 2014 Signage, as Community Infrastructure and to levy the Community Infrastructure Assessments on the Existing Development in CDD No. 5 (as such Existing Development is defined and delineated in the Original Engineer's Report and the Prior Assessment Report), which Existing Development was not previously subject to non-ad valorem special assessments relating to Community Infrastructure. The non-ad valorem special assessments relating to the 2014 Signage will be satisfied by

application of a portion of the Contribution Amount (described in Section 3.5.2) to all assessable Community Property. See Table 10 in this report and Exhibits A and B.

As a result of changes to the Community Infrastructure components and related costs as set forth in the Supplemental Engineer's Report, the Consulting Engineers have estimated the current cost of the Community Infrastructure, including completed components of the 2014 DI Project to be reclassified as Community Infrastructure, is \$138,289,138 (sometimes also referred to herein as the "Community Infrastructure CIP"). The Supplemental Engineer's Report also reflects the Current Development Plan for the Community Property as shown in Table 1 in this report. The Supplemental Engineer's Report also states that the summary of District Infrastructure components and projected costs thereof (sometimes referred to as the "District Infrastructure CIP") included in the Original Engineer's Report remains unchanged, other than as described above with respect to the re-classification of a portion of the 2014 DI Project as Community Infrastructure and that the total District Infrastructure cost shown in the Original Engineer's Report is based on a total cost of \$60,000 per gross acre, which remains unchanged. The Community Infrastructure CIP and the District Infrastructure CIP are collectively referred to as the "CIP".

Notwithstanding the foregoing, the Supplemental Engineer's Report modifies the Original Engineer's Report as necessary to reflect the re-classification of the components of the 2014 DI Project, other than the 2014 Signage, as Community Infrastructure and reflects that the Existing Development will not require any District Infrastructure in the future.

1.2 Purpose

The purpose of this report is to apply the methodology set forth in the Prior Assessment Report, as refined by this Report to better reflect the benefit accruing to Community Property (including the Existing Development) from the costs of Public Infrastructure as defined in the Interlocal Agreement (the "Methodology"), taking into account (i) the revised cost of the Community Infrastructure CIP and the Current Development Plan as set forth in the Supplemental Engineer's Report and (ii) the current and potential future application of the Contribution Amount (described in Section 3.5.2) and all of the Credit Amount (described in Section 3.5.2) with respect to the Community Property. This Report will also address District Infrastructure. The provisions of this Report supersede any inconsistent provisions of the Prior Assessment Report and, except as such provisions are superseded hereby, the Prior Assessment Report remains in effect.

The Districts have informed the methodology consultant that in order to preserve the trust estate pledged to the 2014 CI Note (which consists primarily of non-ad valorem special assessments levied on all assessable Community Property, other than the Existing Development) and the trust estate pledged to the 2014 DI Note (which consists primarily of District Infrastructure Assessments levied on assessable Community Property in CDD No. 5 including the Existing Development), the re-classification of components of the 2014 DI Project and levy of non-ad valorem

assessments on the Existing Development in connection with Community Infrastructure will not be effective until the 2014 CI Note and the 2014 DI Note are refunded and the first series of long-term Bonds are issued by CDD No. 5.

Accordingly, the benefit determinations relating to the Community Infrastructure assessments pledged to the 2014 CI Note and the District Infrastructure assessments pledged to the 2014 DI Note, based on the facts and circumstances at the time such determinations were made, will remain in full force and effect until the 2014 CI Note and 2014 DI Note are no longer outstanding, regardless of any interim actions taken by the District to re-classify components of the 2014 DI Project and to levy Community Infrastructure Assessments on the Existing Development.

At all times prior and subsequent to the re-classification of components of the 2014 DI Project and the levy of Community Infrastructure Assessments on the Existing Development in connection with Community Infrastructure: (i) the combined special benefit to the Existing Development from the Community Infrastructure and the District Infrastructure has and will exceed the combined Community Infrastructure Assessments and District Infrastructure Assessments on such property, and (ii) the assessments allocated to each of the Existing Development parcels and to each of the other assessable Community Property parcels are and will be fairly and reasonably apportioned among such parcels. The re-classification of components of the 2014 DI Project and the levy of Community Infrastructure Assessments on the Existing Development in connection with Community Infrastructure represents an adjustment of assessments based on the benefit that the Districts have provided and will provide to the Existing Development from Public Infrastructure financed with Public Indebtedness payable from the revenue generated by such assessments. Moreover, as a result, among other matters, of the application of all or a portion of the Contribution Amount and all of the Credit Amount, as described in this Report, the aggregate principal amount, and the annual installments, of Community Infrastructure Assessments to be collected with respect to the Existing Development as a result of the levy of the Community Infrastructure Assessments on such property will not exceed the principal amount, or the annual installments, of District Infrastructure Assessments previously levied and collected with respect to such Existing Development.

2.0 Current Development Plan

Table 1 below depicts the Current Development Plan for the Community Property and how it differs from the development plan at the time of the Second Supplement. Table 1 includes the Existing Development and other portions of the Community Property for which Planned Uses (hereinafter defined) are known as of the date hereof.

(Remainder of page left blank)

**Table 1
Current Development Plan**

| Category | 2019 Volume | 2014 Volume | Change |
|--------------------------|-------------|-------------|---------|
| Single-family 55 or Less | 2,154 | 1,500 | 654 |
| Single-family 56-66 | 663 | 1,200 | -537 |
| Single-family 67 or more | 497 | 614 | -117 |
| Multifamily units | 1,594 | 1,972 | -378 |
| Apartment units | 2,480 | 1,502 | 978 |
| Retail square feet | 3,675,075 | 3,650,075 | 25,000 |
| Office square feet | 2,430,728 | 2,180,728 | 250,000 |
| Research & Development | 2,498,602 | 2,333,602 | 165,000 |
| Warehouse/Industrial | 4,583,336 | 4,268,336 | 315,000 |
| Hotel rooms | 791 | 480 | 311 |
| Hospital beds | 300 | 300 | 0 |

3.0 Assessment Methodology

3.1 Overview

The Methodology for allocating the costs of the Community Infrastructure CIP and the District Infrastructure CIP (collectively, the "CIP") is described in the Prior Assessment Report and further refined as described herein. Essentially it is a process by which the Districts allocate the costs associated with the CIP to assessable Community Property benefiting from the CIP on a systems basis, as described more fully in the Prior Engineer's Report and below. The allocation is based upon the special benefits that each property receives.

The CIP is based on the Current Development Plan for the Community Property (as shown in Table 1). However with respect to Community Property, until (i) (in the case of single-family residential property) Final Plats are recorded in the public records of St. Lucie County or (ii) (in the case of multi-family or non-residential property) Site Plans are approved by the City Council of the City and building permits are issued by the City (together, the "Allocation Thresholds"), the precise land uses (the "Planned Uses") are unknown, other than with respect to the portions of the Community Property for which the Planned Uses are known as of the date hereof (as a result of the Allocation Thresholds having been met) . As used herein: (i) a "Final Plat" is defined as the final map of all or a portion of a subdivision showing all building lots, easements, rights of way and other information necessary for providing the detailed description of the subdivision of a parcel of land, approved by the City, and recorded in the public records of St. Lucie County; and (ii) a "Site Plan" (in the case of property approved for multi-family or non-residential development) is defined as the map, drawings, specifications, and other materials approved by the City that identify the uses and development plan, including the unit count and/or maximum floor area for each approved land use type, to be constructed on a parcel of Community Property.

Therefore, the Districts have imposed, and will impose in the case of the Existing Development, non-ad valorem special assessments relating to Community Infrastructure (the "Community Infrastructure Assessments") on a per gross acre basis with respect to the Community Property with respect to which the Allocation Thresholds have not been met and otherwise in accordance with the Methodology, in an amount not exceeding the Maximum Community Infrastructure Allocation (as set forth in Master Report) and each District has imposed non-ad valorem special assessments relating to District Infrastructure (the "District Infrastructure Assessments") on the Community Property in its boundaries in the maximum amounts shown in Table 4, consistent with the Master Report.

The District serving as the Administration District (currently Southern Grove CDD No. 1), has assigned, and will continue to assign, Community Infrastructure Assessments and District Infrastructure Assessments to the Community Property with respect to which the Allocation Thresholds have been met in each of the Districts, using the Methodology.

Table 10 shows the manner in which the Community Infrastructure Assessments are allocated to Community Property. Exhibit A shows this allocation, taking into account a portion of the Contribution Amount and all of the Credit Amount, and separately addressing the Existing Development and the balance of the Community Property. Exhibit B shows this allocation, taking into account a portion of the Contribution Amount and all of the Credit Amount as shown on Exhibit A, but addressing only the Existing Development. Additional portions of the Contribution Amount are expected to be applied in the future as prepayments of Community Infrastructure Assessments. The numerical analysis provided below is illustrative of the Methodology. Since actual costs may vary from the estimates, the Current Development Plan will likely change over time, and the cost of the Community Infrastructure CIP may vary, as components are added or deleted, the actual figures will change as additional information becomes available. However, the information provided here is the best available at this time.

Finally, the Methodology contains a critical feature, the True Up Tests (the "Tests"). The Tests prevent the debt per acre of unplatted property in the Community Property (that Community Property which has not achieved the Allocation Thresholds) from increasing above a "Ceiling Amount" (as hereinafter described). This requirement will be administered by the Administration District on behalf of the Districts. See Section 5.0 of this Report.

3.2 The CIP

The Districts' share of the estimated cost of the Community Infrastructure CIP needed to support the land use plan as it existed at the time of the First Supplement was \$190,832,555. However, the land use plan and the cost of the Community Infrastructure CIP has changed since the date of the First Supplement, as reflected in the Supplemental Engineer's Report. The current land use plan is shown in Table 1 and the Districts' share of the estimated cost of the Community Infrastructure CIP is

now \$138,289,138 as shown in Table 2 below. The cost of the District Infrastructure CIP is unchanged at \$60,000 per gross acre, for an aggregate of \$216,285,000.

**Table 2
Summary of Public Infrastructure Costs**

Community Infrastructure

| Improvement Category | Developer Contribution | SG CDD Cost | Total |
|--------------------------------------------------|-------------------------------|-----------------------|-----------------------|
| Roadways and Related Items | | | |
| Onsite Roadways | | \$ 43,466,720 | \$ 43,466,720 |

| District Infrastructure | Cost Estimate |
|-----------------------------|----------------------|
| District 1 | \$ 2,848,200 |
| District 2 | \$ 23,897,400 |
| District 3 | \$ 50,883,000 |
| District 4 | \$ 57,467,400 |
| District 5 | \$ 32,407,800* |
| District 6 | \$ 48,781,800 |
| Total Estimated Cost | \$216,285,600 |

The total District Infrastructure cost shown above is based on a total cost of \$60,000 per gross acre and remains unchanged from the Master Engineer's Report, except to the extent that this Supplement determines that the Existing Development does not require any additional District Infrastructure.

*Excludes costs associated with the 2014 DI Project, which are being reclassified as Community Infrastructure (other than the 2014 signage), as described in the Supplemental Engineer's Report.

Note: The costs for engineering, legal, administrative, and a contingency allowance amounting to a total of 25% was applied to each cost category of Community Infrastructure (other than completed components of Community Infrastructure). These costs are not included in District Infrastructure.

3.3 Financing Plan for the CIP

The Districts' special assessment consultant, in consultation with the underwriter of the first series of long-term Bonds to be issued by the Issuer (currently CDD No. 5), has designed a financing program to provide the construction funds needed for the CIP, based on the costs set forth in Table 2. Table 3 provides a summary of the financing program needed to fund the Community Infrastructure CIP, and Table 4 displays the financing plan for the District Infrastructure CIP.

In estimating the Community Infrastructure Indebtedness and the District Infrastructure Indebtedness needed to fund the applicable portion of the CIP, the construction fund is gross funded. Since all the construction funds are not expended immediately, interest is earned on the unexpended balance. These interest earnings are flowed to the capitalized interest fund. The bond sizing includes capitalized interest for 12 months. The debt service reserve account is set initially at 75% of maximum annual debt service.

The underwriter's discount is estimated at 1.5%. This allowance pays the underwriter for taking the risks involved in purchasing the Community Infrastructure Indebtedness and/or District Infrastructure Indebtedness. The cost of issuance pays for the trustee,

methodology consultant, and other costs associated with issuing the Community Infrastructure Indebtedness and/or District Infrastructure Indebtedness.

Table 3 shows the financing program totals. However, the long-term debt is expected to be issued in series over a number of years. At this time there is no detailed phasing plan available, instead the debt will be issued based on market conditions and the associated need for infrastructure to support development.

**Table 3.
Community Infrastructure CIP Bond Financing Program**

| <i>Category</i> | <i>Amount</i> |
|---------------------------|-----------------------|
| Construction Fund | \$ 138,289,138 |
| Debt Service Reserve Fund | 8,721,961 |
| Capitalized Interest Fund | 8,738,675 |
| Underwriter's Discount | 750,000 |
| Cost of Issuance | 2,383,275 |
| Rounding | 1,951 |
| Total Par Amount | \$ 158,885,000 |

Table 4 reflects the District Infrastructure CIP bond financing program. There are no changes to the estimated cost for the District Infrastructure from that shown in the Prior Assessment Report. However, it is noted that the Supplemental Engineer's Report concludes that the Existing Development does not require any District Infrastructure.

**Table 4.
District Infrastructure Bond Financing Program**

| <i>Category</i> | <i>District 1</i> | <i>District 2</i> | <i>District 3</i> | <i>District 4</i> |
|---------------------------|--------------------|---------------------|---------------------|---------------------|
| Construction Fund | \$2,848,200 | \$23,897,400 | \$50,883,000 | \$57,467,400 |
| Debt Service Reserve Fund | \$352,968 | \$2,571,915 | \$5,417,018 | \$6,110,867 |
| Capitalized Interest Fund | \$613,200 | \$4,468,100 | \$9,410,800 | \$10,616,200 |
| Underwriter's Discount | \$65,700 | \$478,725 | \$1,008,300 | \$1,137,450 |

| Total Par | \$4,380,000 | \$31,915,000 | \$67,220,000 | \$75,830,000 |

| <i>Category</i> | <i>District 5</i> | <i>District 6</i> | <i>Total</i> |
|---------------------------|---------------------|---------------------|----------------------|
| Construction Fund | \$32,407,800 | \$48,781,800 | \$216,285,600 |
| Debt Service Reserve Fund | \$3,469,245 | \$5,195,405 | \$23,117,419 |
| Capitalized Interest Fund | \$6,027,000 | \$9,025,800 | \$40,161,100 |
| Underwriter's Discount | \$645,750 | \$967,050 | \$4,302,975 |
| Cost of Issuance | \$500,000 | \$500,000 | \$3,000,000 |
| Rounding | \$206 | -\$56 | -\$2,094 |
| Total Par | \$43,050,000 | \$64,470,000 | \$286,865,000 |

3.4 Allocation to Benefiting Properties

The CIP comprises both Community Infrastructure and District Infrastructure. This section of the Report applies the Methodology to allocate the costs associated with Community Infrastructure Indebtedness incurred to fund the Community Infrastructure, based on the Current Development Plan. The application of the Methodology to allocate costs associated with District Infrastructure Indebtedness incurred to fund the District Infrastructure is reflected in a separate section of the Report below.

As described above, until such time as all of the Community Property has achieved the Allocation Thresholds, the specific land uses in the Districts are indeterminable. Therefore, at the outset, the Community Infrastructure Assessments are allocated on a gross acreage basis across all benefited acres comprising Community Property in the District which has not achieved the Allocation Thresholds and otherwise in accordance with the Methodology. As specific Community Property achieves the Allocation Thresholds, the Administration District, on behalf of the Districts, more finely articulates the allocation of Community Infrastructure Indebtedness to benefiting properties based on Planned Uses actually developed. This process will ensure that the Community Infrastructure Assessments allocated to the Districts do not exceed, in the aggregate, the Maximum Community Infrastructure Allocation.

As noted in the Prior Assessment Report, as long as two basic principles are adhered to, Florida law allows the Boards of the Districts great latitude in determining the appropriate methodology to allocate the costs of the CIP to benefiting properties in the Districts. The two principals are: (1) the properties being assessed must receive a special benefit from the CIP and (2) the assessments allocated to each property must be fairly and reasonably apportioned among the benefiting properties. In allocating special assessment costs to benefiting property Florida governments have used a variety of methods including, but not limited to, front footage, area, trip rates, equivalent residential units, dwelling units, acreage, and value.

The following four categories of Community Infrastructure benefiting all Community Property in the Districts are shown in the Prior Assessment Report, it being noted that all components of the Community Infrastructure described in the Supplemental Engineer's Report are in the Original Engineer's Report: (a) roadways and related improvements (allocated on a trip generation method), (b) stormwater management facilities and related improvements (allocated by weighted acres), (c) utilities (allocated by ERUs), and (d) all master signage and recreational trail (allocated on the basis of population).

The following analyzes these categories.

- **Roadways and Related Improvements:**

Roadways and related items, such as signalization, are designed to accommodate the estimated traffic generated by the land use program for the Community Property.

Therefore, it is reasonable to allocate the costs for this class of infrastructure on the basis of trips generated by each land use. The trip rates used in the allocation of costs associated with the roadway portion of the Community Infrastructure CIP were based on the Institute of Transportation Engineers ("ITE")¹.

¹Institute of Traffic Engineers (2017) Trip Generation 10th Edition, Washington, D.C.

- **Stormwater Management and Related Improvements:**

The benefits from the stormwater management system relate to its capacity to protect the properties from flooding. The more stormwater run-off a land use generates the more benefit it receives from the stormwater management system. Every land use type has a particular run off coefficient measuring its average run-off volume. In addition, each land use category has a specific acreage. The product of the runoff coefficient and the acreage results in the weighted acreage amount used for allocation purposes, based on the South Florida Water Management Conceptual Environmental Resource Permits for the development planned for the Community Property (the "Development") and a lake in CDD No. 5.

- **Utilities:**

The utilities consist of water transmission lines and wastewater collection lines both on and off-site. The utility system lines are sized to accommodate all of the demands on the system based on estimated usage. The Equivalent Residential Unit (ERU) method was used in the Prior Assessment Report to measure the benefits from the utility system lines. The ERU basis has been and continues to be used throughout the City of Port St. Lucie for purposes of water and wastewater assessment within various special assessments districts. Consistent with this methodology, the City's user demands for each type of land use was applied.

- **Master Signage and Recreational Trail:**

With respect to the master signage and recreation trails, the benefits from these facilities are most equitably allocated on the basis of population. The population for the residential products are based on City-wide population per dwelling unit and population for the non-residential products population was estimated based on industry studies.

3.5 Allocation for Community Infrastructure

3.5.1 Allocation Methodology

The following recaps and further refines the discussion in the Prior Assessment Report:

Although the Community Infrastructure will be constructed over time in phases, it is actually designed for and will operate as a consistent system serving all of the Community Property in the Districts. For example, the roadway system will be

constructed in phases; however, the entire system will specially benefit all the developable property in the Districts. Improvements built in Phase 1 will benefit properties developed in Phase 1 as well as properties developed in future phases. Likewise, properties developed in Phase 1 will benefit from roadway improvements constructed in Phase 2. This pattern is also true for all of the other major infrastructure systems comprising the Community Infrastructure CIP.

As a result, the most equitable way in which to allocate the benefits of these systems of master infrastructure improvements is on a systems basis. In other words the benefits from the system are examined on a total systems basis and the properties that receive these benefits are also viewed on a total basis. Thus, if the cost of an infrastructure system totals \$10 and is funded in two series of bonds and if these costs were allocable equally to 10 acres of property, the allocation would be \$1 per acre.

However, the reality is that the costs are not proportionately distributed across all phases of the construction program. Furthermore, the benefiting properties will not all be developed in an equal proportionate fashion. The costs are unevenly distributed over time and the development program is not evenly distributed. Thus, if the costs of the Community Infrastructure CIP were allocated strictly on a phase-by-phase basis only to those properties developed during that phase, the cost per acre or per equivalent unit would vary significantly across the three phases. This would be patently inequitable.

Therefore, the most equitable methodology is to utilize the systems approach. As discussed below, the benefits flowing from CIP are viewed on a systems basis and are allocated systematically to all benefiting properties regardless of their phasing. In this way, similar properties receiving similar benefits will be allocated the same amount of debt.

The exact nature and precise location of all of the development that will actually occur in the Development is unknown at this time, and the Planned Uses are only determined at the time specific Community Property achieves the Allocation Thresholds. As a practical matter, the assessments are applied on a first applied, first allocated basis, as Community Property achieves the Allocation Thresholds. The numerical examples provided below illustrate how this Methodology is designed to work.

3.5.2 Contribution Amount and Credit Amount

Subsequent to the date of the Second Supplement, the former master developer of the Development contributed certain Community Infrastructure (the "Contributed Community Infrastructure") consisting of an excavated lake in Southern Grove Community Development District No. 5, having a cost of \$330,000 and 277.492 acres of property for use for water management, conservation, and mitigation necessary for the District to install its stormwater management system. Although this land had a fair market value in excess of \$15,000 per acre according to the St. Lucie County Property Appraiser, the former master developer agreed to accept a value per acre of \$10,000,

or less following a formal appraisal of the property, for the purposes of this contribution. The estimated total value of the contribution of the land is \$2,774,920 at \$10,000 per acre. The total dollar value of the Contributed Community Infrastructure is referred to as the "Contribution Amount" and represents a prepayment of Community Infrastructure Assessments. The application of a portion of the Contribution Amount to prepay Community Infrastructure Assessments is reflected in Exhibit A (and further shown with respect to only the Existing Development in Exhibit B). Additional portions of the Contribution Amount are expected to be applied in the future as prepayments of Community Infrastructure Assessments.

In addition, landowners of Community Property have previously paid principal installments of Public Infrastructure Assessments (as defined in the Interlocal Agreement), for which such Community Property will receive credits. The interest component of Public Infrastructure Assessments previously paid and payable in the future with respect to Community Property has been or will be used to pay interest on the 2014 CI Note and the 2014 DI Note while the same are outstanding. The total principal amount of Public Infrastructure Assessments paid with respect to Community Property is referred to as the "Credit Amount." The number of annual installments in which Community Infrastructure Assessments will be collected in connection with a particular series of future long-term bonds issued by the Issuer will take into account the number of installments of principal of Public Infrastructure Assessments paid prior to the issuance of such bonds. See Exhibits A and B.

3.5.3 Current Estimated Costs of the Community Infrastructure CIP, as financed

Table 5 provides a complete outline of the current estimated costs for all of the Community Infrastructure CIP. Soft costs for design, contingency, and financing are included. These costs are categorized based on the types of improvements and their benefits as discussed above. It is these costs that are allocated to the benefiting properties in the Districts. As each particular component of Community Infrastructure is financed or refinanced in the future, a supplemental assessment report will be approved reflecting the specific nature of those improvements.

**Table 5.
Community Infrastructure CIP on a Fully Financed Basis by Category**

| Improvement Type | Revised CI Costs | As Financed |
|-------------------------------------|----------------------|----------------------|
| Roadway and Related Items | \$88,579,938 | \$101,772,443 |
| Stormwater Management | \$36,067,500 | \$41,439,153 |
| Utilities | \$8,340,450 | \$9,582,621 |
| Master Signage & Recreational Trail | \$5,301,250 | \$6,090,783 |
| | \$138,289,138 | \$158,885,000 |

Table 10 brings the cost allocations in Tables 6, 7, 8 and 9 together. As the Allocation Thresholds are achieved with respect to specific Community Property and evidence thereof is presented to the Administration District, the figures in Table 10, as further modified in Exhibit A, will be used to assign a portion of the costs for the Community Infrastructure CIP to that specific Community Property and to its actual land uses.

The Maximum Community Infrastructure Allocation for the Districts is shown in Table 10. This is based on the as-financed cost of the Community Infrastructure CIP shown in Table 5 needed to support the Planned Uses of the Community Property as summarized in Table 1. Table 10 further presents the allocation of the Maximum Community Infrastructure Allocation to the Planned Uses in the Development, based on Table 1. Note that Table 10 does not establish a maximum annual amount of Community Infrastructure Assessments and that annual amounts in Table 10 are shown for illustration purposes based on the assumptions in Table 5. Further, Table 10 does not take into account the Credit Amount or any Contribution Amount. See Exhibits A and B.

Table 10

Allocation to Community Property for the Community Infrastructure CIP and Estimated Annual Assessment**

| Land Use | Volume* | Total Allocation | Per Unit** | Est. Net Annual Assessment | Est. Gross Annual Assessment** |
|----------------|-----------|----------------------|------------|----------------------------|--------------------------------|
| SF 55 or less | 2,154 | \$16,166,393 | \$7,505 | \$549.31 | \$597.08 |
| SF 56-66 | 663 | \$5,574,264 | \$8,410 | \$615.57 | \$669.09 |
| SF 67 or More | 497 | \$4,520,285 | \$9,093 | \$665.57 | \$723.44 |
| Multi-Family | 1,594 | \$11,122,921 | \$6,978 | \$510.74 | \$555.15 |

| Hotel/Hospital | 1,091 | \$6,951,101 | \$6,371 | \$466.34 | \$506.89 |
| | | \$158,885,000 | | | |

Volume* - SF/Unit, Multi-Family/Unit, Apartments/Unit; Retail/Sq.Ft. Office/Sq.Ft., Research/Sq.Ft., Warehouse/Sq.Ft., Hotel/Room, Hospital/Bed

****** Based upon twenty-six (26) installments and estimated and subject to change based upon various factors, including without limitation, interest rates, application of Credit Amount and/or Contribution Amount and remaining installments.

Note: The estimated gross annual assessment includes an allowance for early payment discount and administrative charges of the property tax collector and appraiser.

As noted above, the only thing certain at this time is that the Maximum Infrastructure Allocation cannot be exceeded and that the allocation of Community Infrastructure Assessments to Planned Uses actually developed within the Community Property will occur in accordance with the Methodology. Until all Community Property achieves the Allocation Thresholds, it is not possible to provide a more precise estimate of the ultimate Maximum Community Infrastructure Allocation to Planned Uses.

An assessment roll for the Community Property (including the Existing Development) consistent with the matters set forth in Table 10, and taking into account the Credit Amount and a portion of the Contribution Amount, is attached hereto as Exhibit A. An assessment roll, consistent with the matters set forth in Table 10 and Exhibit A, addressing only the Existing Development, is attached hereto as Exhibit B.

4.0 Assessment Methodology for District Infrastructure

In addition to the Community Infrastructure CIP as described above, any of the Districts may undertake District Infrastructure improvements that specially benefit only land within their boundaries. In such a case, the Administration District, for itself, or on behalf of another District electing to undertake a District Infrastructure project (subject to each of such District's reserved rights to finance the acquisition and construction of its own District Infrastructure), would issue District Infrastructure Indebtedness to finance such District Infrastructure and the applicable District will levy District Infrastructure Assessments on benefiting property within its boundaries for the repayment of such District Infrastructure Indebtedness.

District Infrastructure benefits only properties within a particular District. This infrastructure consists largely of what are usefully characterized as public subdivision improvements which include roadways, stormwater controls, utilities, landscaping and localized amenities. The Master Engineer's Report has estimated these costs on a per acre basis at \$60,000 per gross acre based on recent bids for these types of improvements. The total estimated cost for the District Infrastructure is \$286,865,000 as shown above in Table 4.

The specific character of these District Improvements will vary somewhat on a project-by-project basis. Therefore, the precise allocation of costs associated with these District Improvements will also vary somewhat as will the scope of properties within a District that receives the special benefits from these District Improvements.

Nevertheless, the basic allocation procedures used for the Community Infrastructure CIP will also be used to allocate costs associated with the similar components of District Infrastructure CIP.

As each particular component of the District Infrastructure CIP is financed in the future, a supplemental assessment report will be approved by the applicable District involved reflecting the specific nature of those improvements.

As noted above, the Original Engineer's Report estimated District Infrastructure Costs on a per acre basis of \$60,000 per gross acre. Each District, as infrastructure is financed, will levy District Infrastructure Assessments on Community Property within its boundaries in the maximum amounts shown in Table 4, and as shall be allocated to Planned Uses actually developed in each District in accordance with the Methodology.

The only thing certain at this time is that the maximum District Infrastructure Assessments levied in each District cannot be exceeded and that the allocation of District Infrastructure Assessments to Planned Uses actually developed within the Community Property in each District will occur in accordance with this Report. The Supplemental Engineer's Report reflects that the Existing Development does not require any additional District Infrastructure.

5.0 True Up Mechanism

The financing plan to support the Community Infrastructure CIP and the District Infrastructure CIP are each subject to Tests, as noted earlier herein and described in the Prior Assessment Report. The Tests prevent the debt per acre on Community Property that has not achieved its Allocation Thresholds from increasing above its Ceiling Amount (hereafter described). This requirement will be administered by the Administration District on behalf of the Districts.

There are two Tests: (1) for Community Infrastructure Indebtedness and (2) for District Infrastructure Indebtedness. The Tests work in essentially the same manner except that the Test for Community Infrastructure Indebtedness operates at the Community Property level while the Test for District Infrastructure Indebtedness is conducted at the level of the Community Property within a specific District. The Tests are conducted at four intervals based upon the percentage of total acres that have achieved the Allocation Thresholds within the Community Property in all Districts or with respect to the Community Property within a specific District. The intervals are at 25%, 50%, 75% and 100% of the gross acres within either the Community Property in all Districts or with respect to the Community Property within a specific District.

Consider the Test for the Community Infrastructure Indebtedness. First a Ceiling Amount of debt per acre is established for all of the Districts when the Issuer issues the first series of long-term Community Infrastructure Indebtedness. The Ceiling Amount is equal to the dollar amount of debt divided by the gross acres in all Districts that have not achieved the Allocation Thresholds.

Second, at each of the intervals outlined above, the debt per acre on the Community Property that has not met the Allocation Thresholds in all of the Districts must be below the Ceiling Amount. If not, the responsible landowner seeking the plat or site plan or building permit, must make a debt reduction payment to bring the amount of debt per acre on that Community Property that has not achieved the Allocation Thresholds below the Ceiling Amount. The obligation to make a debt reduction payment is strictly on the entity seeking to have the plat, site plan or building permit approved.

Third, from time-to-time additional Community Infrastructure Indebtedness will be issued to fund additional phases of the CIP relating to Community Infrastructure. Each time long-term Community Infrastructure Indebtedness is issued, the Ceiling Amount is adjusted to reflect the total amount of debt outstanding for all Community Infrastructure Indebtedness and the total amount of acres that remain without having met the Allocation Thresholds in all of the Districts. Notwithstanding the foregoing, the Community Infrastructure Assessments will not exceed the Maximum Community Infrastructure Allocation.

Now consider the Test for the District Infrastructure Indebtedness. The Test works just like the one for Community Infrastructure except that it is District specific. When District Infrastructure Indebtedness is issued, a District Ceiling Amount is established by dividing the number of acres in the District into the debt issued. When the Community Property that has achieved the Allocation Thresholds in the District reaches 25% of the gross acres in the District, the District True Up Test is conducted to assure that the debt on the acres in the District that have not met the Allocation Thresholds does not exceed its then applicable District Ceiling Amount. If the test is violated, the responsible landowner seeking the plat or site plan or building permit, must make a debt reduction payment to bring the debt per acre on Community Property that has not met the Allocation Thresholds below the then applicable District Ceiling Amount. As additional District Infrastructure Indebtedness is issued from time to time, the applicable District Ceiling Amount would be adjusted to an amount equal to the new total debt allocated to properties that have not met the Allocation Thresholds, divided by the remaining acres in the District that have not met the Allocation Thresholds.

6.0 Total Debt on Community Properties

The Community Property is additionally subject to non-ad valorem special assessments levied by the SAD in connection with the SAD Bonds. Table 11 presents the total annual SAD and Community Infrastructure assessments on the Community Property by property type, based on Table 10, without applying the Credit Amount and any portion of the Contribution Amount. The specific allocation of the assessments relating to the SAD Bonds are determined when Community Property is platted. The total annual assessment levels shown in Table 11 are for reference only, as (i) the actual Planned Uses and the amount of Community Infrastructure Indebtedness assumed for purposes of Table 11 may differ from the assumptions, (ii) any applicable Credit Amount or Contribution Amount is not reflected, and (iii) District Infrastructure Assessments may apply.

FOOTNOTES

- Includes Sqft of Phase 1 Site Plan Only, not of phase 2.
- The Community Infrastructure Assessments reflected in this assessment roll relating to properties for which a Final Plat (in the case of single-family residential property) has not been recorded in the public records of St. Lucie County or a Site Plan has not yet been approved by the City of Port St. Lucie, Florida (the "City") and a building permit has not been issued by the City (in the case of multi-family or non-residential property) (together, the "Acresage Parcels") are preliminary. In accordance with the Third Supplemental Assessment Methodology Report for Public Infrastructure—Southern Grove Community Development Districts Nos. 1-6" dated August 1, 2019 (the "Supplemental Assessment Report"), the Community Infrastructure Assessments will be further allocated to properties within the Acresage Parcels in accordance with Table 3D of the Supplemental Assessment Report (table reproduced below) when a Final Plat is recorded in the public records of St. Lucie County (in the case of single-family residential property) or a Site Plan is approved by the City and a building permit is issued by the City (in the case of multi-family or non-residential property), taking into account the Credit Amount and a portion of the Contribution Amount. Accordingly, the Community Infrastructure Assessments set forth herein with respect to properties comprising the Acresage Parcel may be greater or less than the Community Infrastructure Assessments reflected herein with respect to such properties.

NOTE: A portion of the Contribution Amount has been applied to all Community Property to reduce the cost of the Community Infrastructure CIP as a prepayment of Community Infrastructure Assessments relating to the 2014 Signage. All capitalized terms not otherwise defined herein have the meanings ascribed therein in the Supplemental Assessment Report.

FOOTNOTES

1 Includes Sept of Phase 1 Site Plan Only, not of phase 2.

2 The Community Infrastructure Assessments reflected in this assessment roll relating to properties for which a Final Plat (in the case of single-family residential property) has not been recorded in the public records of St. Lucie County or a Site Plan has not yet been approved by the City of Port St. Lucie, Florida (the "City") and a building permit has not been issued by the City (in the case of multi-family or non-residential property) (together, the "Acquire Parcel") are preliminary. In accordance with the Third Supplemental Assessment Methodology Report for Public Infrastructure—Southern Cross Community Development Districts Nos. 1-4 dated August 1, 2018 (the "Supplemental Assessment Report"), the Community Infrastructure Assessments will be further allocated to properties within the Acquire Parcel in accordance with Table 18 of the Supplemental Assessment Report (table reproduced below) when a Final Plat is recorded in the public records of St. Lucie County (in the case of single-family residential property) or a Site Plan is approved by the City and a building permit is issued by the City (in the case of multi-family or non-residential property), taking into account the Credit Amount and a portion of the Contribution Amount. Accordingly, the Community Infrastructure Assessments set forth herein with respect to properties comprising the Acquire Parcel may be greater or less than the Community Infrastructure Assessments reflected herein with respect to such properties.

NOTE: A portion of the Contribution Amount has been applied to all Community Property to reduce the cost of the Community Infrastructure CIP as a proponent of Community Infrastructure Assessments relating to the 2014 Signage. All capitalized terms not otherwise defined herein have the meanings ascribed therein in the Supplemental Assessment Report.

RESOLUTION 2026-22

A RESOLUTION OF THE BOARD OF SUPERVISORS OF THE SOUTHERN GROVE COMMUNITY DEVELOPMENT DISTRICT NO. 4 SETTING A PUBLIC HEARING TO BE HELD ON MAY 6, 2026, AT 10:30 A.M. AT 10799 SW CIVIC LANE, PORT ST. LUCIE, FLORIDA 34987, FOR THE PURPOSE OF HEARING PUBLIC COMMENT ON IMPOSING MASTER SPECIAL ASSESSMENTS ON CERTAIN PROPERTY WITHIN THE DISTRICT GENERALLY DESCRIBED AS THE SOUTHERN GROVE COMMUNITY DEVELOPMENT DISTRICT NO. 4 IN ACCORDANCE WITH CHAPTERS 170, 190 AND 197, FLORIDA STATUTES.

WHEREAS, the Board of Supervisors of the Southern Grove Community Development District No. 4 (the “Board”) has previously adopted Resolution 2026-21 entitled:

A RESOLUTION OF THE BOARD OF SUPERVISORS OF THE SOUTHERN GROVE COMMUNITY DEVELOPMENT DISTRICT NO. 4 DECLARING MASTER SPECIAL ASSESSMENTS; INDICATING THE LOCATION, NATURE AND ESTIMATED COST OF THOSE INFRASTRUCTURE IMPROVEMENTS WHOSE COST IS TO BE DEFRAID BY THE MASTER SPECIAL ASSESSMENTS; PROVIDING THE PORTION OF THE ESTIMATED COST OF THE IMPROVEMENTS TO BE DEFRAID BY THE MASTER SPECIAL ASSESSMENTS; PROVIDING THE MANNER IN WHICH SUCH MASTER SPECIAL ASSESSMENTS SHALL BE MADE; PROVIDING WHEN SUCH MASTER SPECIAL ASSESSMENTS SHALL BE PAID; DESIGNATING LANDS UPON WHICH THE MASTER SPECIAL ASSESSMENTS SHALL BE LEVIED; PROVIDING FOR AN ASSESSMENT PLAT; ADOPTING A PRELIMINARY ASSESSMENT ROLL; PROVIDING FOR PUBLICATION OF THIS RESOLUTION; AND RATIFYING PRIOR ACTIONS.

WHEREAS, in accordance with Resolution 2026-21, a Preliminary Special Assessment Roll has been prepared and all other conditions precedent set forth in Chapters 170, 190 and 197, *Florida Statutes*, to the holding of the aforementioned public hearing have been satisfied, and the roll and related documents are available for public inspection at the offices of the District Manager, c/o Special District Services, Inc., 2501A Burns Road, Palm Beach Gardens, Florida 33410 and 10521 SW Village Center Drive, Suite 203, Port St. Lucie, Florida 34987 (the “District Office”).

NOW THEREFORE BE IT RESOLVED BY THE BOARD OF SUPERVISORS OF THE SOUTHERN GROVE COMMUNITY DEVELOPMENT DISTRICT NO. 4:

SECTION 1. There is hereby declared a joint public hearing to be held at 10:30 a.m. on May 6, 2026, at Tradition Town Hall located at 10799 SW Civic Lane, Port St. Lucie, Florida 34987 for the purpose of hearing comment and objections to the proposed special assessment

program for District improvements as identified in the Preliminary Special Assessment Roll, a copy of which is on file. Affected parties may appear at that hearing or submit their comments in writing prior to the hearing to the office of the District Manager, Special District Services, Inc., 2501A Burns Road, Palm Beach Gardens, Florida 33410.

SECTION 2. Notice of said hearing shall be advertised in accordance with Chapters 170, 190 and 197, *Florida Statutes*, and the District Manager is hereby authorized and directed to place said notice in a newspaper(s) of general circulation within St. Lucie County (by two publications one week apart with the first publication at least twenty (20) days prior and the last publication shall be at least one (1) week prior to the date of the hearing established herein). The District Manager shall file a publisher's affidavit with the District Secretary verifying such publication of notice. The District Manager is further authorized and directed to give thirty (30) days' written notice by mail of the time and place of this hearing to the owners of all property to be assessed and include in such notice the amount of the assessment for each such property owner, a description of the areas to be improved and notice that information concerning all assessments may be ascertained at the District Office. The District Manager shall file proof of such mailing by affidavit with the District Secretary.

SECTION 3. This Resolution shall become effective upon its passage.

PASSED AND ADOPTED this 3rd day of April 2026.

A RESOLUTION OF THE BOARD OF SUPERVISORS OF THE SOUTHERN GROVE COMMUNITY DEVELOPMENT DISTRICT NO. 4 DESIGNATING A DATE, TIME, AND LOCATION OF A PUBLIC HEARING REGARDING THE DISTRICT'S INTENT TO USE THE UNIFORM METHOD FOR THE LEVY, COLLECTION, AND ENFORCEMENT OF NON-AD VALOREM SPECIAL ASSESSMENTS AS AUTHORIZED BY SECTION 197.3632, *FLORIDA STATUTES*; AUTHORIZING THE PUBLICATION OF THE NOTICE OF SUCH HEARING; AND PROVIDING AN EFFECTIVE DATE.

WHEREAS, the Southern Grove Community Development District No. 4 (the “District”) is a local unit of special-purpose government created and existing pursuant to Chapter 190, *Florida Statutes*, being situated within Port St. Lucie County, Florida; and

WHEREAS, the District pursuant to the provisions of Chapter 190, *Florida Statutes*, is authorized to levy, collect, and enforce certain special assessments, which include benefit and maintenance assessments and further authorizes the District’s Board of Supervisors (the “Board”) to levy, collect, and enforce special assessments pursuant to Chapters 170, 190 and 197, *Florida Statutes*; and

WHEREAS, the District desires to use the Uniform Method for the levy, collection and enforcement of non-ad valorem special assessments authorized by Section 197.3632, *Florida Statutes*, (the “Uniform Method”).

NOW, THEREFORE, BE IT RESOLVED BY THE BOARD OF SUPERVISORS OF THE SOUTHERN GROVE COMMUNITY DEVELOPMENT DISTRICT NO. 4:

SECTION 1. A public hearing will be held to adopt the Uniform Method on May 6, 2026 at 10:30 a.m. at Tradition Town Hall located at 10799 SW Civic Lane, Port St. Lucie, Florida 34987.

SECTION 2. The District Secretary is directed to publish notice of the hearing in accordance with Section 197.3632, *Florida Statutes*.

SECTION 3. This Resolution shall become effective immediately upon its adoption.

PASSED AND ADOPTED this 3rd day of April, 2026.
